FEBRUARY 1984

Lago wins Safety Award of Honor

Above, National Safety Council's "Award of Honor" plaque. Lago was granted this award for operating 3.8 million employee-hours without an on-the-job disabling injury (May 6, 1982 to November 13, 1983).

Mr. Juan Yañez, General Manager of Esso Caribbean and Central America, presents the National Safety Council's Award of Honor to Mr. Antonio Cavallaro.

Noise and your Hearing ...

NOISE ... what is it, really?

Simply put, noise is unwanted sound. Technically, it is a form of vibration which may be conducted through solids, liquids or gases. It is a form of energy in the air.... invisible vibrations that enter the ear and create a sensation. Almost every conceivable kind of sound can, at one time, be welcome and at another time be disliked.

HEARING LOSS ... what are the signs?

Continuous exposure to high noise can cause hearing loss. Normally, this can be a long process which may go unnoticed for several years. Some of the first signs of hearing problems are: ringing in the ears; asking people to repeat what they have said; others complaining that you are talking too loud or that the radio or TV set is blaring; "cupping" the hand to the ear and, finally lip-reading. Several areas in the Lago refinery are designated as high noise areas based on readings taken with the aid of a

precision sound measuring instrument. Decibels (dBA) are the units that measure the loudness of sound. If the noise exceeds the 85 dBA level, hearing protection should be used to avoid damage to your hearing.

EAR PROTECTION how does Lago protect its employees against hearing loss? Noise level surveys are conducted periodically, and employees are informed of the need to wear ear protection when necessary. In the high noise areas in the refinery a sign "Use Ear Protectors" is posted. Employees, contractors and visitors must wear ear protection at all times while in these areas. Ear plugs and muffs are available at the Central Tool Room and also in all field offices.

Your hearing is one of your most precious possessions. You need it for learning, for communication, for safety and for pleasure. Protect it by wearing ear plugs in noisy areas. Use ear protection as though your hearing depended on it because IT DOES!

Boroto y bo Oido ...

BOROTO ta kiko e ta, verdaderamente?

Bisá facilmente, boroto ta un zonido no deseado. Technicamente, e ta un forma di vibracion cu por wordo conducta dior di solidanon, liquidanon y gasnar. E ta un forma di energia den aire vibracionnan invisible cu ta drenta den orea y ta crea un sensacion. Casi cada tipo di zonido cu ta wordo tendi por wordo gustá un biaha y disgustá un otro biaha.

PERDIDA DI OIDO kiko ta e indicacionnan?

Contacto continuo cu boroto fuerte por causa perdida di oido. Normalmente, esaki por ta un proceso largo cu por continua por varios años sin wordo notá. Algun di e indicacionnan di problema cu oido ta oreanan cu ta "ring"; pidi hende pa ripiti loke nan a bisa; otroton ta keha cu bo ta papia mucho duro of cu volumen di radio of television ta hopi halto; "cup" man tras di orea y, finalmente, lesamento di lip.

Guillermo Tromp and Haime Thijssen, both of Fuels, using two different types of ear muffs in a high noise area in the refinery.

Varios areanan den e refinaria di Lago ta designa como areanan cu boroto fuerte basá arriba indicacionnan cu a wordo obtien eu e ayudo di un instrumento di precision cu ta midi zonido. Decibelnan (dBA) ta e unidadnan cu ta midi con duro e zonido ta. Si e zonido ta mas halto cu e nivel di 85 dBA, proteccion pa oido mester wordo uzá pa evita daño di bo oido.

PROTECCION DI OREA con Lago ta protecha su empleadon contra perdida di oido?

Inspeccioñnan pa nivelnan di zonido ta wordo haci periodicamente, y empleadonan ta wordo informa tocante e necesidad di bisti proteccion pa orea ora ta necesario.

Den e areanan den refineria unda cu tin boroto hopi fuerte, tin un horchi poní cu ta bisa "Use Ear Protectors" ("Uza Protectornan pa Orea"). Empieadonan, contratistanan, y bishitantenan mester bisti proteccion pa orea durante henter e tempo cu nan

ta den areanan aki. "Plug"nan pa orea y "ear muff"nan ta obtenible na e Central Tool Room y tambe na tur e oficinan den "field."

Bo oido ta un di bo posesionnan mas precioso. Bo tin mester di dje pa siña, pa comunicá, pa seguridad y pa placer. Protechó door di bisti "plug"nan pa orea den areanan unda cu tin boroto fuerte. Uza protección pa orea como si fuera bo oido ta depende di dje pasobra e tá depende di dje.

Mr. Antonio Cavallaro, Lago's General Manager, cuts the ribbon to officially inaugurate the renovated Storehouse. Present are Storehouse employees and colleagues from Mechanical, Technical and Controller's who had helped to make the renovation possible, in record time.

Joaquin Croes proudly displays the original painting of the January Esso News cover which was given to him by members of the Management Committee as one of his retirement gifts. For more than 40 years, Joaquin was a symbol of man's dedication to his job. In 1943 he started with Lago as a Messenger "B" in the then Industrial Relations Department and he was acting Process Manager at the time of his retirement. Joaquin served on numerous committees and was a member of various CWA negotiating teams and a long standing member of the SOC. Now he is enjoying a well-earned retirement. Pabien, Joaquin, and muchas gracias!

Netherlands Antilles and holds
a B.S. degree in Electrical
Engineering.

Technical Dept.

The refurbished Esso Club Soda Bar was opened on February 10. This facility now offers a wide choice of lunches to our employees in a pleasant, relaxing atmosphere.

Captain Henry H. Hooyer, who recently left Aruba after a two-year assignment mainly to train pilots here, proudly presents a copy of a book written by him on the art of shiphandling to Operation Manager Bob Naugle. Captain Hooyer graduated from Nautical College, Amsterdam, The Netherlands, in 1947. After a seafaring career of twelve years, he became involved in shiphandling as harbor master in West New Guinea, as a harbor pilot at Aruba, as a mooring master at Sidon, Lebanon, and as a senior harbor pilot at Ras Tanura, Saudi Arabia. He also taught for two years at the Shiphandling Training Center in Grenoble, France.

Outstanding Officer Program ...

"Man of the Year" is a familiar term in the Aruban Community, but "Officer of the Year" may raise many a query. Nonetheless, Lago's Industrial Security Department now proudly boasts an "Officer of the Year" in the person of Ronald N. Leito.

In 1983, the Industrial Security Department initiated an Outstanding Officer Program which is designed to stimulate professional development, individually and collectively, and to recognize top officer performance. Quarterly, three officers are selected as candidates based on recommendations provided by the shift lieutenants. These officers are then interviewed by an Oral Review Board consisting of the Security Administrator, the Security Captain and one management member from another department, usually a manager. The candidates are examined in subjects covered in the Industrial Security Manual and in general practical work habits. The one who performs best in this interview becomes the Officer of the Quarter and receives a plaque which finds a home in the Industrial Security Headquarters. Officer Leito captured not only the "Officer of the Quarter" title but was also chosen "Officer of the Year."

With this Program, Industrial Security provides its personnel with an incentive for motivation, enthusiasm, dedication ... in one word: High Performance.

Programa di e Oficial cu ta Sobresali ...

"Hombre de Año" ta un termino familiar den e Comunidad Arubiano, pero "Oficial de Año" ta algo cu no ta mucho conoci. Sinembargo, Lago su Departamento di Seguridad Industrial awor orguyosamente ta anuncia e "Oficial de Año" den e persona di Ronald N. Leito.

Na 1983, e Departamento di Seguridad Industrial a

General Manager A. Covellero presents engraved plaque to Ronald N. Leito while Security Administrator Bill Crenshaw and Captain Frederick Brooks look on.

inicia un Programa di Oficialnan Sobresaliente cu ta disefia pa stimula desaroyo profesional, individualmente y colectivamente, y pa reconoce e oficial cu ta cumpli mihor cu su trabao.

Cada trimester, tres oficial ta wordo selecta como candidatanan, basi ariba recomendacionnan cu ta wordo duná door di e tenientenan di warda. E oficialnan aki ta wordo entrevistá door di un "Oral Review Board" cu ta consisti die Administrador di Seguridad, e Capitan di Seguridad y un miembro di gerencia di un otro departamento, normalmente un manager. E candidatanan ta wordo examina den topiconan cu ta wordo cubri den e Manual di Seguridad Industrial y den costumbernan general y practica di trabao. Esun cu sali for di entrevista como esun mihor, ta bira "Oficial di Trimester" y ta ricibi un placate cu ta haya en su lugar den e oficina principal di e Departamento di Seguridad Industrial. Oficial Leito a capturá no solamente el titulo "Oficial di Trimester", sino tambe a wordo scobi como "Oficial di Año."

Cu e programa aki, Seguridad Industrial ta olrece na su personal un incentivo pa motivacion, entusiasmo, dedicacion cu poco palabra: trabao di calidad halto

Reducing Costs

Keeping costs at a minimum is always important to a healthy organization, but cutting costs during this difficult transition period is not only important, it is essential if we are to improve our competitive position and insure gainful employment. With this in mind, there can be no doubt that each employee should set his own personal cost reduction goal. To assist you in this, we offer the following tips:

- First of all, recognize that costs can be cut
- Identify unnecessary costs.
- Develop and contribute constructive ideas
- Relate cost reduction ideas to your supervisor
- Assist in cost reduction activities.
- Above all, BE COST CONSCIOUS!

Reduciendo gastonan

Tene gastonan na un minimo semper ta importante pa un organizacion sano, pero reduccion di gastonan durante e periodo dificil di transicion no solamente ta importante pero tambi esencial si nos kier mejorha nos posicion competitivo y sigurá empleo ventahoso. Teniendo cuenta cu esaki no por tin duda cu cada empleado mestor pone su mesun meta pa reduci gastonan. Pa asisti bo den esaki, nos ta ofrece e siguiente tipnan:

- Promue cu tur cos, reconoce cu gastonan poi wordo reduci.
- Identifica gastonan innecesario.
- Desaroya y contribui na idean constructivo.
- Conta bo supervisor tocante idean pa reduci gastonan.
- Asisti den actividadnadan cu ta reduci gastonan.
- Mas cu tur cos, SEA CONSCIENTE DI GASTONAN!

LIGHTING
PARADE

Papiando di Salud ...

Pa Dr. Larry Crook

Den un esfuerzo pa determina algun di e irregularidadnан medico mas comun den nos grupo di empleadonan, nos stal medico recientemente a completa un revision di e archivo medico de cada empleado na Lago Ata aki e resultadonan ...

Hipertension

E irregulardad chronic aki, cual ta asocia cu un riesgo grandi pa malesa di curazon, bloqueo di adernan cu ta hiba sanger pa e sesanon y fayo di risonnan ta wordo encontra den uno di cada cuatro empleado di Lago. Comentone di hopi salo, falta di exercicio, presion, y especialmente gordura ta causanan importante di hipertension. Tratamiento ta involvi correccion di e causanan aki y tumamento di remedis.

Diabetes Mellitus

E malesa aki, den cual un mucho sucu den sanger, ta wordo encontra den cinco porcion di e empleadonan di Lago. E tipo mas comun aki ta diabetes Tipo II. Normalmente, e la cumrina na edad adulto, ta asocia cu gordura y no ta requien inyeccions di insulina. Tratamiento ta envolvil cambiamento di dieta, bahanento di peso, y turma remedis si ta necesario.

Gordura

E irregulardad medico aki ta alarmantemente comun entre nos empleadonan. Sesenta-y-cinco porcion di e empleadonan masculino y cuarenta porcion di esnan femenino ta pisa mas cu nan pesonan ideal. Esaki kier nicensi cu cada empleado ta carga un peso promedio di 18 libras extra, cu un total di 9 ton di pesos dimas! Gordura ta condicione na hipertension, diabetes, enfermedad di curazon y bloqueo di adernan cu ta hiba sanger pa e sesanon, e ta haci otio irregulardadnан chronic, manera artritis y dolor di lomba, hopi mas pio.

Problemanan di lomba y ligamentonan

E grupo di malesanakan aki ta basta comun, especialmente entre hemdenan di edad avansa y cu ta pisa dimas. Trinta porcion di nos empleadonan tin dolor di lomba chronic! E ligamentonan cu mas ta wordo afecta ta inusinan, heupnan y enkelnan.

Humamento

Sorprendentemente, 37 porcion di empleadonan masculino y 20 porcion di esnan femenino ta huma. Mas prensante ainda ta e proporcion halto di e empleadonan mas joven cu ta huma. Humamento ta un di e cosan mas malo cu un persona por haci pa su salud. E ta asocia cu enfermedad di curazon, malesa di pulmonnan, y por lo menos tres diferente tipo di cancer.

Irregularidadnан di wovo

Pterigium, cual ta un crecimiento benigno arriba e parti blanco di wovo ta basta comun akinan, y ta wordo haña cerca 20 porcion di e empleadonan. Glaucoma, cual ta wordo causa dooor di aumento di presion paden di e wovo, tambie ta basta comun.

Kiko nos ta siña di loka a wordo menciona cu mayoria di e problemanan medico comun cu nos ta topa akinan, por wordo preventi o modifica.

Notanan di Dr. Larry Crook: "Cosnan mas importante cu tur hende por haci pa mantene un bon salud ta come apropiadamente, mantene un bon peso di curpa, haci exercicio regularmente, come menos salo y evita sigarianan.

Health Corner

By Dr. Larry Crook

In an effort to determine some of the most common medical disorders in our employee group, our medical staff recently completed a review of the medical record of every employee at Lago. Here are the results

Hypertension ...

This chronic disorder, which is associated with a high risk of heart disease, stroke, and kidney failure, is found in one out of every four Lago employees. A high salt intake, lack of exercise, stress, and especially obesity, are important causes of hypertension. Treatment involves correcting these causes, and taking medication.

Diabetes Mellitus ...

This disease, in which there is too much sugar in the blood, is found in five percent of Lago employees. The most common type here is Type II diabetes. It usually begins in adulthood, is associated with obesity, and does not require insulin shots. Treatment involves changing the diet, losing weight, and taking medications if needed.

Obesity ...

This medical disorder is alarmingly common among our employees. Sixty five percent of the male and forty percent of the female employees are above their ideal weights. This means that, on the average, every employee is carrying eighteen extra pounds, for a total of nine tons of excess weight! Obesity leads to hypertension, diabetes, heart disease and stroke; it makes many other chronic disorders, such as arthritis and back pain, much worse.

Back and Joint Problems ...

This group of diseases is quite common, especially among the older, overweight employees. Thirty percent of our employees have chronic back pain! The joints most commonly involved are the knees, hips, and ankles.

Smoking ...

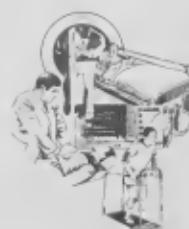

Surprisingly, 37 percent of male employees and 20 percent of the females smoke. Even more worrying is the high proportion of younger employees who smoke. Smoking is one of the worst things a person can do for his/her health. It is associated with heart disease, lung disease, and at least three different kinds of cancer.

Eye Disorders ...

Pterygium, which is a benign growth on the white part of the eye, is quite common here, seen in twenty percent of employees. Glaucoma, which is caused by increased pressure inside the eye, is also quite common.

What do we learn from the above that most of the common medical problems found here can be prevented, or modified.

Notes Dr. Larry Crook: "Important things everyone can do to maintain good health are to eat properly, maintain a good body weight, exercise regularly, decrease the intake of salt, and avoid cigarettes."

Gasoline can be dangerous

Gasoline is an important part of our lives. We need it for our cars and trucks, for lawn mowers, for boats and motorcycles. However, gasoline can be dangerous if not handled properly. Gasoline is extremely flammable. Gasoline vapors may also be harmful to your health. Most people using gasoline in normal situations (like pumping gasoline into their cars) do not experience any of the symptoms listed in this paragraph. However, inhaling gasoline vapors can cause dizziness or irritated eyes, nose, and throat. A high concentration of vapors can cause headache, flushed face, nausea, mental confusion and depression, loss of appetite, slurred speech, and difficulty in swallowing. Extremely high concentrations of gasoline vapors can lead to vomiting, convulsions, coma, and death. Getting gasoline on your skin may also cause the same problems as inhaling gasoline vapors.

Studies with laboratory animals have shown that gasoline vapors caused kidney damage and kidney cancer in rats and liver cancer in mice. As far as scientists now know, low-level or infrequent exposure to gasoline vapors is unlikely to be associated with cancer or other serious diseases in humans. However, in light of the above information, you should take the precautions outlined in this article.

Keep gasoline away from heat, sparks, and flame.

Gasoline catches fire and burns very easily. Gasoline vapors may explode.

- Do not smoke when handling gasoline.
- Do not use gasoline indoors.
- Use only as a motor fuel. Do not use gasoline for any other purpose.
- Put gasoline in a small engine (like a lawn mower) only when the engine and attachments are cool.
- Do not store or use gasoline near a furnace, hot water heater, or anything with a pilot light. Store

only in a well-ventilated area, away from your living quarters.

- Store gasoline only in approved containers that are clearly labeled. Never store gasoline in glass or unapproved plastic containers.
- Turn off your car engine before filling the gas tank.
- Do not mix even small amounts with kerosene.
- Do not use in kerosene heaters or lamps.

Avoid prolonged breathing of vapors.

- Keep your face away from the nozzle and gas tank when filling your car's gas tank.
- Keep away from container opening.
- Use gasoline only in an area that gets plenty of fresh air.
- Keep gasoline containers closed when not in use.
- Do not overfill gas tank. Make sure the gas cap is put back on when your gas tank has been filled

(cont. on page 3)

Gasolin por ta peligroso

Gasolin ta forma un parti importante di nos bidanan. Nos tin mester di dje pa nos autonan y trucknan, pa machinnan cu ta corta yerba, pa botonan y motocicletanan.

Sinembarago, gasolin poi ta peligroso si e no wordo uza correctamente. Gasolin ta pega candela masha lhe. Vapornan di gasolin por haci daño na bo salud tambe. E industria petroleo kier pa bo uza gasolin mas sigui cu ta posible.

Mayoria de hende cu ta uza gasolin den situacionnan normal (manera yena gasolin den nan autonan) no ta experiencia ningun di e symptomanan cu ta wordo menciona akinan. Sinembargo, respiracion di vapornan di gasolin por causa hiramiento di cabeza di irritacion di wowonan, nanishi y garganta. Un concentracion alto di vapornan por causa dolor di cabeza, cambio den color di cara, mareamiento, confusión mental y depresión, perdida di apetit, cambio di voz y dificultad cu gulimento.

Concentracionnan sumamente alto di vapornan di gasolin por causa sacramento, convulsionnan, coma y morto. Si gasolin cai arriba ho cuerdo o poi causa e mesun problemanan cu ora bo respira e vapornan di gasolin. Estudionan cu animalnan den laboratorio, a muestra cu vapornan di gasolin a causa daño na rimonnan y a causa cancer di rison cerca djakanan y cancer di higa cerca ratonnan.

Asina lew cu scientificonan si awor, ta improbable cu contacto infrequeute of na un nivel hopi abao ta asocia cu cancer of otro malesanan serio den humananon

(cont. riba pag. 3)

DO tank your car the correct way to avoid gas fumes.

DANGEROUS ...

(cont. from page 2)

Do not put gasoline in your mouth - gasoline can be harmful or fatal if swallowed.

- NEVER siphon gasoline by mouth
- If someone swallows gasoline, do **not** induce vomiting; call a doctor immediately.

Keep gasoline away from your eyes and skin.

Gasoline may cause eye and skin irritation. Gasoline may be absorbed through the skin and cause the same problems as breathing gasoline vapors.

- NEVER use gasoline to wash your hands.
- If you get gasoline on your skin, wash promptly with soap and water or use a waterless cleaner.
- If you get gasoline in your eyes, flush eyes for 15 minutes with clean water.
- Remove gasoline-soaked clothing and launder before reusing.

Keep gasoline where children cannot reach it.**PELIGROSO ...**

(cont. di pag. 2)

Sinembargo, relaciona cu e informacion cu a wordo dudu, bo mester tuma precaucionnan cu ta wordo menciona den e articulo aki.

Tene gasolin lew for di cos of lugarnan cayente, candela y "sparks" (chispa)nan.

Gasolin ta pega candela y ta kima masha facil mes. Vapornan di gasolin por explota.

- No huma ora bo ta uza gasolin.
- No uza gasolin padien di cos of den cuarto.
- Uza gasolin solamente como combustible. No uzé pa otro cos.
- Yena gasolin den un motor chiquito (manera un machin pa corta verba) solamente ora e motor y otto partuan ta frieu.
- No warda ol uza gasolin cerca di un forno, un "heater" pa awa (avente, of cualquier cos cu tin un "pilot light"). Warda gasolin den un area unda cu tin bon ventilacion y lew for di bo cas.
- Warda gasolin den un container aprobab cu ta matá claramente.
- Nunca warda gasolin den containernan di glas of di plastik cu na ta aprobab.
- Paga e motor di bo auto prome cu yena e tanki.
- No bruta gasolin, ni cantidadnan chiquito, cu kerosin.
- No uza gasolin den "heater" of lampinan di kerosin.

Evita respiracion prolonga di vapornan.

- Tene bo cara lew lor di e "nozzle" y e tanki di gasolin ora bo yena gasolin den e tanki di bo auto.
- Tene bo cara lew lor di e boca di e container.
- Uza gasolin solamente den un area cu ta hafia hopi aire fresco.
- Tene e container di gasolin bon sera ora cu e no ta wordo uzá.
- No yena e tanki di gasolin dimas y sera e tanki bon ora bo caba.

No hinca gasolin den bo boca - gasolin por haci daño of por ta fatal si bo gulié.

- Nunca chupa gasolin cu boca
- Si un hende guli gasolin, no poné saca; yama un docter inmediatamente.

**DO use a safety can to store gasoline.****No laga gasolin mishi cu bo wowonan of bo cuero.**

Gasolin por irrita bo wowonan y cuero. Gasolin por wordo absorba door di bo cuero y por causa e mesun problemanan cu bo ta experientia ora bo respira vapornan di gasolin.

- Nunca uza gasolin pa laba man.
- Si gasolin cai arriba bo cuero, labe di bisha cu habon y awa de cu un "waterless cleaner". Si gasolin cai den bo wowonan, "flush" bo wowonan pa 15 minuit cu awa limpi.
- Kita paña cu ta muha cu gasolin y labe prome cu e wordo uzá atrobre.

Warda gasolin unda muchanan no por yega na dje.

Lago's Marketing Operations

One of the Lago operations which takes place outside of the refinery area is marketing; nonetheless, it is a vital link in the chain of services provided to the public. Our marketing section covers the following areas:

Airport Refueling

The Airport Refueling Operation handles all aircraft calling at the Reina Beatrix International Airport. The large aircrafts take turbo jet fuel, while smaller aircrafts, such as those operated by Oduber Aviation, take avgas. On the average about 740 aircrafts are fueled here each month.

Bunkering

The Bunkering Operation handles all bunker requirements in the San Nicolas and Oranjestad harbors, as well as some calls in Willemstad, Curaçao. Numerous grades of bunker fuel oil (different viscosities), marine diesel oil and marine gasoil are supplied. In addition, at the request of vessels, marine lube oils may be supplied. Approximately 120 vessels are bunkered each month.

Landtrade

Aruba landtrade is mostly done through the Esso Service Stations. It provides the local market with gasolines, diesel, kerosene, LPG, batteries, tires and other accessories. There are nine Esso service stations in Aruba.

Marketing is part of the Operations Programming and Marketing Department headed by John Every.

Seguridad va pa Ganadores!!!

Interactive use of Computers

Traditionally, the use of computers required the assistance of the computer experts in an organization's "Systems Design and Programming" group. They provided the link between the computer user and the computer itself. Recent advances in computing technology, however, have brought the computer much closer to the user, often eliminating the intermediate step involving the technical expert.

A new way of using computers has been developed where the user communicates via video terminals directly with the computer. The name assigned to this type of computing is interactive computing. It is a two-way conversation between a user who has a problem to solve and the computer. The computer provides an efficient and accurate means for analyzing a problem and presenting the results.

ADVANTAGES

Interactive computing has several advantages such as:

- **USER FRIENDLY.** An interactive computing system is designed for the user, rather than for the computer expert. Mastering the use of this tool requires little training because of the simple commands needed.
- **ACCESSIBILITY.** Interactive computing provides direct access to information stored in computer memories by the user.
- **CONTROL.** Direct communication between user and computer provides full user control over information gathering, analysis and reporting.
- **FASTER RESPONSE TIME.** Interactive computing, by eliminating the intermediate step of the expert between user and computer, substantially reduces the amount of time required to complete any computing task.
- **IMPROVED ANALYTICAL TECHNIQUES.** Interactive computing simplifies complex decision making processes. Problem solving, which previously required lengthy calculations -- many manually performed --, has been made easy.
- **PRODUCTIVITY AND PROFITABILITY.** Interactive computing improves the mechanics of problem solving and produces significant gains in terms of employee productivity and company profitability.

At her computer terminal, Bianca Croes of Lago's Employee Relations Department, retrieving information.

AT LAGO

Interactive computing was introduced at Lago during 1981. Currently over 40 terminals, linked to the IBM system 4341 mainframe computer, serve a population of over 100 engineering professionals and systems analysts.

Uzo Interactivo di Computer

Tradicionalmente, e uso di computernan tabata requiri e asistencia di e expertos di computere di grupo de "Diseño y Programación de Sistemanan" den un organizacion. Nan tabata forma e conexión entre usuari cu ta uza e computer y e computer mes. Progresos nacien den tecnología di computer, simebun go, a tierece e computer mas cerca di e usador, hopi baha eliminando o paso intermedio cu ta involve e experto tecnico. Una manera nobo a wordo desaroya unda e usador que comunica via terminalian di video, directamente cu e computer. E nombr cu a wordo duná na e tipo di computacion aki ta "computacion interactivo". E ta una combersacion entre e usador cu mester resolve un problema y e computer. E computer ta ofrece un maneria eficiente y preciso pa analisa un problema y presenta resultados.

VENTAHANAN

Computamento interactivo tin valios ventahanan manera:

- **TRAHA PA E USADOR** Un sistema de computacion interactivo ta diseña pa e usador, en vez de pa e experto di computer. Poco entrenamiento ta requiri, pa por siña con ta uza e insulemento aki, paixi di e orden simpelnan cu mester wordo uza.
- **ACCESIBILIDAD.** Computacion interactivo ta duná e usador acceso directo na e informacion cu niver wardá den y memorianan di e computer.
- **CONTROL.** Comunicacion directo entre e usador y e computer ta duná e usador control completo aniba, colecciónamiento di informacion, análisis y reportehe.
- **TEMPO DI CONTESTA TA MAS LIHE.** Door de elimina e paso intermedio entre e experto y e usador di computer, computacion interactivo substancialmente ta reduci e cantidad di tempo cu ta necesario pa completar cualquier trabao di computacion.
- **TECNICANAN ANALITICO A MEHORA** Computacion interactivo a simplifica procesos complicia di haciendo di decision. Solucion di problemanan cu antes tabata requiri calculacionan lango, hopi di nan haci manualmente, a wordo haci lacl.
- **PRODUCTIVIDAD Y PROVECHO** Computacion interactivo ta mehora e mecanicinan di solucionar problema, y ta produci ventahanan signifante pa loke ta trata productividad di emplecadonan y provecho pa compania.

NA LAGO

Computacion interactivo a wordo introduci na Lago durante aña 1981. Actualmente mas di 40 terminal conecta aiiba e sistema 4341 "Mainframe" computer di IBM, ta sirbi una cantidad di mas cu 100 profesionalnan di ingenieria y analystanan di sistema.

Lago su operacionnan di marketing

Indi di operacionnan di Lago en ta funciosa palor di e di reclutanta marketing sinembargo e ta un parti importante di e cadena di servicionan ofreji na e aruba. Nos sección di marketing ta cubri e siguiente artíku.

enamiento di Combustible na Aeropuerto

Operacion di "Refueling", esta e suministracion di combustible na aeropuerto, ta duna servicio na tur avion de Reina y Aeropuerto Internacional Reina Beatrix. E bahanan grandi ta tuma "turbo jet fuel" mientras cu bahanan mas chikito, manera esnan cu Oduhejacion ta opera, ta tuma "avgas." Un promedio di mas o menos 740 avion ta tuma combustible akinan cada dia.

unkering

Operacion di Bunkeling ta tuma na su encargo tur e mandanar pa combustible den e walian di San Nicolas y Oranjestad y tambièn algun demanda for di Willemstad. Curosive. Varios clasenan di bunkel fuel oil (fuente viscosidadinan), marine diesel oil, y marine fuel na wordo suministra. Adicionalmente, ariba operacion di e barcumian, marine lube oil por wordo industria. Aproximadamente 120 barcu ta wordo ingresa en combustible cada luna.

andtrade

Sumision di venta ta parti di e "Operations Controlling and Marketing Department" cu actualmente ta encabeza pa John Every.

Health Corner

Heart Attack!!!

Recognize its symptoms

By Dr. Larry Crook

Heart disease is the leading cause of death for both men and women. Twice as many men and women die from heart attacks than from all types of cancer combined. Because of this, it is important that everyone know the symptoms of a heart attack. Pain is the most important symptom. The pain is usually described as dull, aching, or squeezing. It starts slowly, and may last for hours. It is located in the center of the

chest, and may spread to the arms, the neck, or the upper part of the abdomen, where it is often mistaken for indigestion, or heartburn.

The pain is often accompanied by weakness, shortness of breath, anxiety, nausea, or vomiting. The victim may be pale, cool, and sweating profusely. Occasionally a victim will feel dizzy, lightheaded, or may even faint.

The pain may begin at any time, whether the patient is resting or working, and is not relieved by rest. Often the victim will walk about trying to find relief. Heart attack may occur without pain. This is fairly common in older people and in diabetics. These people may have some of the other symptoms listed above, such as shortness of breath, vomiting or fainting.

There is an important fact to keep in mind about heart attacks. Over one half of the people who die from heart attacks do so in the first 60 minutes, before they ever reach a hospital! So, the most important thing you can do if you think you might be having a heart attack is to go to the hospital or clinic as soon as possible.

Papiando di Salud

Atake di Curazon!!!

Reconoce e symptomanan

By Dr. Larry Crook.

Enfermedad di curazon ta e causa principal di morto pa ambos homber y muherman. E cantidad di homber y muherman cu ta muri di atakenan di curazon ta dos baha mas grandi cu e cantidad cu ta muri di tur tipo di cancer combiná. Ta pesei, ta importante pa tur hende conoce e symptomanan di un atake di curazon.

Dolor ta e symptomata mas importante. E dolor ta wordo describi como dolor cu no ta intenso, cu ta molestia ol cu ta primi. E ta cuminsa poco poco y e por continua pa oranan largo. E ta localisa den e centro di bo pecho, y e por sigi pa ho hisasan, pa e nek of pa e parti arriba di e abdomen, unda hopi baha y ta wordo confundi pa indigestion of pa acido di stoma.

Hopi baha y dolor ta wordo compaña pa debilidad, falta di rosea, anshamento, märimiento y sacramento. E victimas por tin un cara descolorá, frieuw y e por ta sodando hopi. Tin baha y victimas ta sinti cu su cabez ta bira, y e por ta sinti tokondra of e por hasta cai flauw.

E dolor por cuminsa na cualquier ora, sea, cu e paciente ta descansando of ta trahando, y no ta wordo alivia door di descanso. Hopi baha y victimas lo cana sord pa haña alivio.

Atakenan di curazon por tuma lugar sin dolor. Esaki ta basta comun cerca hendenan mas bieuwy y diabeticonan. E hendenan aki por tin algun di e otro symptomanan cu a wordo menciona arriba, manera falta di rosea, sacramento of nan por bai for di tino.

Tin un hecho imponente cu nos tin di corda tocante atake di curazon. Mas cu mitá di esnan cu ta muri di atake di curazon ta fayece durante e prome 60 minutnan, prome cu nan yega hospital Pesei, e cos mas importante cu bo por haci, si bo ta kérte cu bo poi ta hafiendo un atake di curazon, ta, pa bai hospital ol clinica mas lihe cu ta posible.

APRIL 1984

SPECIAL SAFETY EDITION

President Cavallaro: "All injuries can be prevented"

President Cavallaro, addressing the safety issue at the four sessions conducted for the Technical and Operations departments.

Each of us must make a personal commitment to turn the situation around, and work with much more emphasis on safe and reliable operations." Those were the words of Tony Cavallaro, Lago's General Manager, at the recent Employee Safety Information Sessions held at the Esso Club for the Technical and Operations departments.

That resolute statement conveyed Lago Management's concern for the long list of incidents that have occurred during the latter part of 1983 and especially during February and March of 1984. "Unless we stop this trend

immediately and take all actions necessary to change course, we will soon run the risk of suffering a major personnel injury, fatality, or operational disaster," said Mr. Cavallaro.

Major and Minor Incidents

Bob Naugle, Manager of the Operations Department, presented a long list of the serious and costly incidents that occurred, together with some of those minor incidents which had the potential of turning into major disasters. During the past eight months, the refinery suffered eight major incidents including a fire at the

cont. on page 2

Presidente Cavallaro: "Por preveni tur herida"

"Cada un di nos mester haci un compromiso personal pa trece cambio den e situacion, y traha cu hopi mas enfasis ariba operacionnan sigur y confiable". Esey tabata e palabran di Tony Cavallaro, Lago su General Manager, na e Sesionnan Informativo di Seguridad pa

cont. on page 3

A total of about 800 employees attended the safety sessions.

"ALL INJURIES*cont. from page 1*

primary separator, furnace fires, tank overflows, with a repair cost of over \$1,500,000 (one and a half million dollars). The minor incidents included crane accidents, small fires, scaffold collapses, and caustic splashes. Although not costly each on their own, each of them

In his presentation, Operations Department Manager, Bob Naugle, showed color slides of some of the accidents. One of the incidents discussed involved the crane pictured below.

could have been disastrous "with a little twist of fate, a spark, some hydrocarbon nearby, or some other situation," commented Mr. Naugle.

Causes of incidents

An investigating committee consisting of the division superintendents of the Technical and Operations departments and an ER&E engineer, undertook a study reviewing the contributing factors of the recent major incidents and those dating back to 1981. The committee

concluded that the most significant contributing factors or basic causes are the following:

- inadequate procedures, guidelines or procedures not followed
- lack of adequate planning, supervision, manpower coverage and technical assistance
- in some cases, insufficient experience

According to the report, the most critical errors were committed during startups/shutdowns and furnace operations. Mr. Naugle expanded on each of the factors and then discussed the plans intended for improvement.

Safety performance

Mr. Cavallaro reviewed Lago's 1983 employee safety performance and concluded that although a lot of progress was made, the results are not yet satisfactory. "When compared to the Exxon All Injury Index, our record shows that our frequency and severity of incidents is double the Exxon average."

"The major disappointment in '83, however," he said, "was in the area of reliable operations." 1983 saw nine reportable fires or explosions versus two in 1982. The frequency of these operational incidents in 1983 was about three times higher than the Exxon average.

Safety concepts

"We don't want to leave any doubt in anybody's mind as to the level of quality and excellence we expect from the organization," said Mr. Cavallaro. As someone once said: Safety is everyone's responsibility. And the concepts in the management of safety at Lago reflect this.

- ALL injuries can be prevented
- Management, including first line supervisors and technical staff, has the responsibility for preventing personal injuries or operational incidents
- The employee must follow rules and procedures and take his/her share of responsibility.

As Cavallaro mentioned at the beginning of the meeting, the safety sessions will have achieved the objective to improve safety and reliability. "If at the end of these reviews we walk back into our jobs with a different perspective than the one we had prior to this meeting and with a strong determination to personally contribute towards changing the present situation."

How did employees react to the sessions?

How did our employees react to the Safety Sessions? To find this out, a questionnaire was distributed to a random selection of our employees. Following are the results of the questionnaire. A word of thanks goes to all those employees who have cooperated.

Results

Did you know there were such a high number of incidents in the refinery or did you find that out through the sessions?

In Knew before sessions: 11. Found out through sessions: 15.

What was the point Management was trying to make during the sessions?

Employees should be more safety conscious: 11. Management is interested in safety for cost/reliability/profit: 8.

Others: Management is interested in safety for humane reasons. Management wanted to give information. Safety is priority of Management. More discipline is needed: Safety is everyone's responsibility.

Did you think it was necessary/useful to have such a meeting?

All said yes.

Are you more concerned about safety now that you have attended the session?

More concerned now: 13.

Remained the same: 13. (Eight of these said their concern remained the same, because they were always concerned about safety).

Why do you think safety is of much importance to Management?

cont. on page 4

"TUR HERIDA

cont. di pag 7

Unpleadonan, tem recientemente na Esso Club pa e departamentonan Technical y Operations.

E declaracion resuelto ey a comunica e preocupacion di Gobernaciñ di Lago pa e lista largo di incidentenan cu a tuma lugan durante e ultimo parti di 1983 y especialmente durante Februario y Maart di 1984. "A nos cu nos stop e tendencia immediata y tuma un accionnan necesario pa cambia e cuuso, nos lo core e riesgo di sufi i un accidente di personal grandi, fatalidad, el desastre operacional", Sr. Cavallaro a bisa.

Incidenten di candelana

Bob Naugle, Manager di Operations Department, a presentá un lista largo di e incidentenan serio y costoso en una linea lunga, huncu con algun di e incidentenan menor de golpe tu e potencial di bira desasternan grandi. Durante e ultimo ochto lunanan, refineria a sufrí ocho incidenten incluyendo un candelana na e "primary separator" candelanana di forno, "overflow" di tanki, cu un gasto pa reparacion di mas cu \$ 1.500.000 (un millon y cien dollar). E incidentenan menor ta includi incidenten cu griñanan, candelanana chiquito, saltadon cu a caí den otro, y "caustic splashes". Naugle a mencionado unha suceso no dia costoso, cada uno cu uno por golpe desastreoso, "cu un cambio chiquito di sistema, mi desliza un poco ly ocaiburo den cercania, al díduo eno situación". Sr. Naugle a comentá.

Consepcion di Seguridad:

Un comisión di investigacion consistiendo di e superintendente di division di e departamentonan Technical y Operations y un ingeniero di ER&E a haci un reporte recien y la tornan cu a contribui na e cumplimentación grande tecnicu y eshan cu ta data hek te 1980.

El comisionado a mencionó que e la forman ol causaran basico en la responsabilidad contribui ta e siguienteñan:

- posibilidades de accidente - han pobre, of procedura cu no cumplimenta
- falta de planeamiento, supervisión, distribucion di trabajos y ambiente tecnico adecua

- den algun caso, falta di suficiente experiencia

E errornan mas critico a ser haci durante start-up y shutdown di planta y durante operacion di forno. Sr. Naugle a desplegá arriba cada un di e factor- y errornan y despues a discutí e plannan destiná pa mejoracion.

Ejecucion di Seguridad

Sr. Cavallaro a revisá e ejecucion di seguridad di empleadonan di Lago na 1983 y a concluir cu aunque hopi a ser haci, e resultadonan no ta satisfactorio ainda. "Ora bo comparece cu e "Exxon All Industry Index" (Exxon su indice di heridanan), nos record ta muestra cu e frecuencia y severidad di nos incidentenan ta doble e averabe di Exxon."

"E desilucion mas grandi na '83 sinembargo," Sr. Cavallaro a bisa. "tabata den e area di operacionnan confiable." 1983 a mira nube cedula de explosionnan reportable contra dos na 1982. E frecuencia di e incidentenan operacional aki na 1983 tabata alrededor di tres baha mas halto cu e averabe di Exxon.

Concepcion di Seguridad

"Nos no kier laga duda den mente di ningun hende pa loke ta e nivel di calidad y excelencia cu nos ta spera die organizacion," Sr. Cavallaro a bisa. Manera un hende a yega di bise: Seguridad ta responsabilidad di tur hende. Y e concepcionan den e mancho di seguridad na Lago ta reflecha esaki:

- TUR herida por wordo preventi
- Gerencia, incluyendo "first line" supervisornan y staff tecnico tin responsabilidad pa preventi herida personal of incidentenan operacional
- Empleado mester sigi regla- y procedururan y tuma su parti di responsabilidad

Manera Cavallaro a mencionó na cuminsamento di e reunion, e sessionnan informativo di seguridad lo a logra nan objetivo di mejora seguridad y confiabilidad, "si na fin di e sessionnan aki nos cana baí bek pa nos trabao cu un perspectiva diferente cu esun cu nos tabata tin promé cu e reunion aki y cu un determinacion fuerte pa contribui personalmente na cambia e situacion actual."

*Jossy Croes di Operations Department
haya oportunidad di haci un pregunta
na e sesion.*

*Con nos empleadonan
a reaccioná ariba
sesionnan di
seguridad?*

*O.D. Habibe di Technical Department
ta haciendo un pregunta na e orador.*

Con nos empleadonan a reaccioná ariba e Sessionnan di Seguridad? Pa haya sa ese, un cuestionario a sei distriuibui pa empleadonan selecciona a base di casualidad. Siguientemente nos tin e resultadonan di e cuestionario. Un palabria di agradecimiento ta sei duna na tur e empleadonan cu a cooperá.

Resultado

Bo tabata sa cu e total di incidentenan den refineria tabata asina halto, ol bo a haya sa ese y pa medio di e sessionnan?

Tahata sa kaba: 11. A haya sa pa medio di sesion: 15.

Kiko tabata e punto di mas importante cu Gerencia tabata purba trés dilanti den e sesion?

Empleadonan mester ta mas consciente di seguridad: 11.

Gerencia ta interesá den seguridad pa motivo di gasto/confiabilidad/ganashi: 8.

Otronan: Gerencia ta interesá den seguridad pa motibonan humanitario; Gerencia kier duna

Lago's Safety Committees

At Lago, the two safety committees that coordinate and steward safety efforts company-wide are the Lago Central Safety Committee and the Committee on Safe Operations. An explanation of their functions, responsibilities and membership are listed below. Besides those two, there are seven other safety committees representing the following groups: HDS/ Fuels; OM&S; Utilities; Maintenance Operations; Mechanical Services; Industrial Security and Technical Department.

Lago Central Safety Committee

The Lago Central Safety Committee was established to coordinate and steward the Company's overall efforts in the area of personal safety. The main responsibilities of this committee are:

- Review and endorse Safety Programs
- Steward progress on established programs
- Promote enforcement of safety rules, practices and procedures
- Recommend incentive plans and awards
- Recommend policies
- Interact with Safety Committee
- Ascertain contractor safety practices and off-the-job safety

The Committee meets once a month and is presently comprised of the following members: A. Cavallaro, R.E. Naugle, J.R. Every, W.A. Crenshaw, R.G. Goley, H.F. Cofli, A. Meiners, J.W. Hodgson, R.G. Bailey, J.F. Curiel, J. Noguera and R. Geerman (IOWUA representative).

Safe Operations Committee

The objective of the Committee on Safe Operations is to promote and stimulate the application of safe operating practices and procedures for the protection of personnel and equipment through-out the Lago organization. The Committee's main functions are:

- Serve as a focal point for broad review of Lago's safety procedures and practices in the areas of Operation, Process and Mechanical Design, Maintenance, Industrial Hygiene and Fire Protection.
- Make appropriate recommendations to the responsible organization for action, within the above listed areas, which relate to safe operating procedures and practices.
- Follow up on recommendations, if adopted, to see that they fulfill the scope of their intent.
- Assist the Lago organization in dealing with problems arising within the function of the Committee.
- Keep abreast of the Plant operations and changing conditions which introduce new working environments that may affect the safety of our men, equipment and/or the community.
- Recommend changes to safety standards as new information and techniques becomes available.

This Committee usually meets twice a month and consists of the following members: R.E. Naugle, V.M. Meikle, S. Arends, J.T. Croes, J.V. Croes, D.D. Esch, B.R. Bloom, D.E. Picus, A.H. Sluer, E.E. Brown, C.R. Emerencia, J.F. Curiel and J.D. van der Linde.

WORKING TOGETHER FOR A SAFER REFINERY

More than 10 of these banners were hung at some key spots in the refinery to remind employees that safety is everyone's responsibility.

HOW DID OUR EMPLOYEES REACT cont. from page 2

Question Management is concerned about the cost of accidents: 18.

Management is interested in the well being of their employees: 7.

Others: Lago wants to maintain good name; Management is responsible for safety.

Question Did you think the response of the audience attending the session was positive or negative?

Positive: 21. Negative: 1. Mixed: 4.

Question The sessions were only held in English. Do you think they should have been held in Papiamento also to reach more employees?

No: 17. Yes: 9.

Two suggestions were made: a) Continue with speeches in English, but have a person translate questions from Papiamento to English, b) Continue with speeches in English, but have them printed in English and Papiamento for distribution.

Question Do you have any suggestions to improve our communications on safety?

Answer More publication (on accidents, near-misses, investigation reports, quarterly reports, safety slip system): 6.

Improve safety talks (more, longer, more regular and to all employees): 7.

More personal contact (during Management safety visits, more safety personnel visits in plant, more sessions): 7.

Other: i.e. monthly slogan contest, follow through with contractors.

Question Have any points come to your mind after the sessions which you would like to see addressed?

Answer Fourteen suggestions were received, including: make investigation reports available, maintain equipment in good working condition, ensure safety material is available. All suggestions were forwarded to the Safety Section.

cont. on page 8

Comisionnan di Seguridad na Lago

Na Lago, e dos comisionnan di seguridad cu ta coordina y guia e esfuerzonan di seguridad di henter e Compania ta e "Lago Central Safety Committee" ye "Committee on Safe Operations". Un splicacion di nan funcion, responsabilidad y miembrecia ta para aki bao. Fuerá die dosman ey, tui siete otio comision di seguridad representando e siguiente gruponan: HDS/Fuels; OM&S; Utilities; Maintenance Operations; Mechanical Services; Industrial Security y Technical Department.

Lago Central Safety Committee

Lago Central Safety Committee a ser estableci pa coordiná y guia e esfuerzonan di Compania en general den e area de seguridad personal. E mayor responsabilidadnan di e comision aki ta:

- Repasá y duna apoyo na Programanan di Seguridad
- Guia progreso di programanan estableci
- Promové e aplicacion di regla-, practica- y proceduranan di seguridad
- Recomendá plannan y premionan incentivo
- Recomendá polízanan
- Tene interaccion cu e Safe Operations Committee
- Haci sigu di practicantan di seguridad di contratista y di seguridad fuera di trahow.

E Comision te reuni un vez pa aña y actualmente ta consisti di e siguiente miembronan: A. Cavallaro, R.E. Naugle, J.R. Every, W.A. Crenshaw, R.G. Goley, H.F. Coll, A. Meiners, J.W. Hodgson, R.G. Bailey, J.F. Curiel, J. Noguera y R. Geerman (IOWUA representative).

Durante e prome siman di Mei, Contratistanan tambe a atende e sesion di seguridad presenta pa Presidente Cavallaro y Bob Naugle, Operations Manager.

CON NOS EMPLEADONAN A REACCIONÁ ... cont. di pag 31

informacion; Seguridad ta prioridad di Gerencia; Mester di mas disciplina; Seguridad ta responsabilidad di tur hende.

Bo ta pensa cu tabata necesario/probechososo pa tin un reunion asina?

Tur a bisa si.

Bo ta mas preocupá pa seguridad awor cu bo a atende e sesion?

Mas preocupá awor: 13.

A keda mesos: 13 (Ocho di esakinan a bisa cu nan preocupacion a keda mesos pasohra semper nan tabata preocupá pa seguridad).

Pakiko, den bo opinion, seguridad ta di hopi

Safe Operations Committee

E objetivo di e Safe Operations Committee ta pa promové y stimulá e aplicacion di practica y proceduranan operacional di un manera sigur y proceduranan pa e proteccion di personal y equipo den henter e organizacion di Lago. E funcionnan mas importante di e Comision ta:

- Sirbi como e punto di enfoque pa revision di tur e proceduranan y practicanan di seguridad di Lago den e area di Operacion, Process y Mechanical Design, Maintenance, Industrial Hygiene y Fire Protection.
- Haci recomendacionnan apropiá na e organizacionnan cu ta responsabel pa accionnan, den e areanan arriba mencioná, relacioná na e procedura y practicanan operacional di seguridad
- Haci sigu cu e recomendacionnan ta wordo sigi si nan a wordo adoptá, pa wak cu nan ta realizá tur locual ta na alcanze
- Asisti e organizacion di Lago den tratamiento di problema cu ta surgi den e funcion di e Comisionnan
- Keda al tanto di operacionnan di planta y e condicionnan cu ta cambia, cuanlan ta introduci ambientenan nobo di trabow cu por afectá e seguridad di nos hende, equipo y/o comunidad
- Recomenda cambio pa e standardnan di seguridad ora cu informacion y tecnicanan nobo bira disponibel
- E Comision aki generalmente ta reuni dos vez pa luna y ta consisti di e siguiente miembronan: R.E. Naugle, V.M. Meikle, S. Arends, J.T. Croes, J.V. Croes, D.D. Esch, B.R. Bloom, E.E. Picus, A.H. Sluer, E.E. Brown, C.R. Emerencia, J.F. Curiel y J.D. van der Linde.

importancia pa Gerencia?

Gerencia ta preocupá pa e gasto di accidente. 18.

Gerencia ta interesá den bienestar di su empleadonan: 7. Otronan: Lago kier mantené su bon nomber; Gerencia ta responsabel pa seguridad.

Bo a hay a e reaccion di e publico cu a atendé e sesion positivo o negativo?

Positivo: 21. Negativo: 1. Dividi: 4.

E scisionnan a wordo tení na Ingles solamente. Bo ta kere cu nan lo mester a wodò di hací na Papiamento tambe pa alcanzá mas empleado?

No: 17. Si: 9. Dos sugerencia a ser hací: a) Sigi cu e discurso na Ingles, pero tene un persona disponibel pa traduci preguntanen di Papiamento pa Ingles, b) Sigi cu e discurso na Ingles y Papiamento pa distribucion.

cont. on page 8

Medication: do you really need it?

Does medication buy you better health? Not necessarily. Sometimes, medicine may actually harm instead of improve your health. According to the U.S.A.'s Federal Drug Agency Consumer Report, "a major drug problem in America stems from the misuse or excessive use of medicines." To protect your health and prevent accidents, you should know some facts about the effects of medicine and the precautions you should take in its regard.

OTC and Rx drugs

The two basic types of medicines are over-the-counter drugs, which are those that can be bought without a doctor's prescription, and prescription drugs (Rx).

OTC drugs are relatively safe when the directions on the

labels are followed. However, all medicines affect body functions. Besides, one medicine can be safe for some people and cause side effects in others. Thus, before buying and using any OTC drugs, the directions and warnings on the label should be read carefully. If you suffer from different symptoms that require different medicines, consult your doctor, as some medicines cannot be taken together safely. And, of course, beware of mixing medicine with alcohol.

Prescription drugs

Although you should not expect to receive medicine everytime you go to the doctor, when you are prescribed medicine, you should always get as much information as possible about its side effects and the precautions you should take. When and how often should you take it? What reactions may occur (nausea, vomiting, nervousness)? Should you take any precautions (drive a car, operate machinery)? Should you take the medicine until the supply is finished or until the symptoms disappear? Can it be taken along with other medicine? A simple instruction can prevent misuse or excessive use of the drug.

Safety precautions

It is ironic that although most medicine is meant to relieve pain in people, many times it results in pain and sorrow, because the necessary precautions were not taken. To avoid accidents, a few simple steps should be followed:

- clean out your medical chest regularly; many drugs lose or increase in strength with time. Also, if the doctor takes you off a medicine, destroy what is left immediately; do not save drugs, especially antibiotics, for the next illness. Look for medication that has changed color, formed residue, is crumpled or cloudy.
- Keep the label on the container for directions and identification purposes.
- Do not use other people's drugs and do not let them use yours. Different people react differently to the same drug.
- Do not take medicine in the dark! Before you take any medication make sure that what you have in your hand is really what you want.

On picture: Paul Nicholson.

- Do not mix pills in one container; some chemicals react with others. Some neutralize others.
- Be sure you store medicines as directed; some labels say to store in a cool place.

Precautions for children

Taking medicine not designed for them, is one of the major health and safety hazards for children. As a matter of fact, in the U.S.A., medicine is the cause for most accidental poisonings among children under five years of age than any other chemical. Therefore, although it has been said over and over again, it is worth repeating: store all medicine and other dangerous chemicals out of children's reach, lock the cabinets, close bottles properly, and never leave medicine unguarded when answering the phone or door. And, just as with adult medicine, do not experiment with it. Always give your children the dosage as directed.

Do I really need it?

As you can see, there are a lot of hazards connected with medicines. So, before buying any medicine in a drugstore, ask yourself: Do I really need it? Cannot time and body itself do the healing? For instance, a good night sleep may be all you need to relieve every day tension; a proper diet combined with a good exercise schedule is more advisable than taking pills to reduce the appetite. The good and natural way is not always the easy way, but is not your health worth the effort?

The Esso Caribbean and Central America members of the Exposure Hazards Subcommittee met at Lago in April to review the programs and training aids available here to assess their applicability for use throughout CCA. Standing from l to r: J. Noguera (Lago), J. Barth and R. Nurczynski (CCA). Sitting from l to r: J. Reynolds (CCA), H. Marafioti (EIA), A. Urrutia (Guatemala) and A. Meiners and R. Arends (Lago).

Medicina: di berdad bo mester di dje?

Remedi ta percura pa un mihor salud? No necesariamente. Tan bisha realmente, remedii por haci daño na bo salud en liez di mejoré. Segun e "Federal Drug Agency Consumer Report" na Estados Unidos, "el problema principal di droga na Merca ta bini for di uso coléz ol uso excesivo di remedii". Pa protehá bo salud e previa un accidente, te mester ta na altura di algun remedii o en el electronan di remedii e precaucionnan cu tu remedi tuma pe.

El dia a dia esas basicas di remedinan ta esan "over-the-counter" o cual ta esan cu poi wordo comprá sin receta di dokter o di droganan cu receta (Rx). Droganan OTC ta que se promocionan sin peligro si siga e direcccionan arriba e abajo. Sinembargo, tui remedii ta afectá funcionnan di organos del mas, un remedii por ta bon pa algun hende y ta mas, droganan secundario den otroan. Pesey, prome e comprá y uza cualquier di e droganan OTC, e direccio e pasonan arriba e etiqueta mester wordo lessi cuidado-simiente. Si ho ta suel di sintomaman dilertenente cu ta respuesta di medicina dilertenente, consulta bo dokter, ya cu algun remedii no poi wordo tuma hunto sin peligro. Y naturalmente tene cuidao pa no mezclá remedii cu alcohol.

Anuke cu bo no mester spera di haña remedii cada bisha cu ho bai dokter, ora cu bo haña un remedii prescribi, ho mester sempre busca mas informacion posible tocante su electronan secundario y e precaucionnan cu bo mester tuma. Ki ora y con frecuente bo mester tumé? Ki reaccion por tuma lugar (matrimonio, sacramento, neviosidad)? Bo mester tuma cualquier precaucion (core auto, operá machin)? Bo mester tuma e remedii te ora cu e cabá ol te ora cu e sintomaman desaparece? E poi wordo tuma huento cu otro remedii? Un instruccio simple por prevenir mal uso di uso excesivo di droga.

Precaucionnan pa Seguridad

Ta ironico cu anuke cu mayoria di remedii ta destiná pa alivio dolor den henderan, hopi bisha e ta resultá den dolor y tristeza, pasobra e precaucionnan necesario no a wordo tuma. Pa evitá accidente, algun pasonan simple mester wordo sigí:

- Haci bo botiquín hashi regularmente: hopi droga ta

bura menos of mas fuerte cu tempo. Tambe, si e dokter bisabo pa bo stop di tuma un remedii, destrui joke a resta inmediatamente: no spaar droga, especialmente antibiotica, pa e siguiente malesa. Busca pa haya remedinan cu a cambia di color, cu a forma un residuo, cu ta desmenuzable of cu ta nubloso.

- Keda cu e etiqueta di e container pa motivo di e instruccio y identificacion arriba dje.
- No uza droganan di otro hende y no laga nan uza esan dibo. Diferente hende ta reaccioná diferente arriba e mesun droga.
- No tuma remedii den scur! Promé cu bo tuma cualquier remedii, sigúr bo mes cu loke ho tin den bo man ta realmente loke ho kier.
- No bruha pildora den un container: algun producionan quimico ta reaccioná cu otroan. Algun ta neutralizá otro.
- Sea sigur di warda remedii segun e direccion: algun etiqueta ta bisa pa warda e remedii den un lugar fresco.

Precaucion pa Muchanan

Un di e peligronan principal pa salud y pa seguridad di mucha ta ora cu nan ta tuma remedinan cu no ta trahá pa nan. Ta un echo, cu na Estados Unidos remedii ta causa mas venenamiento accidental entre muchanan bao di cinco año cu cualquier otro producto quimico. Ta pesey, anuke cu ela wordo bisá asina hopi vez, e ta bal repeticion: warda tur remedii y otro producionan quimico peligroso na unda cu muchanan no por yega, sera cabinetan na yabi, sera boternan debidamente y nunca laga remedii para sin vigilancia ora di contestá telefon of atendé hende na porta. Y mescos cu remedii pa adulto, no experimentá cune. Semper duna bo juinan e dosis segun e direccion.

En berdad bo tin mester di dje?

Manera bo ta mira, tin hopi peligro relacioná cu remedii. Pesey, prome cu bo cumplira cualquier remedii na botica, puntra bo mes: En berdad mi tin mester di dje? Tempoy bo corpa mes no por curabó? Por chempel, un bon sosiego anochi por ta tur local bo tin mester pa alivio e tension di cada dia; un dieta apropiá combiná cu un schedule di bon exercicio ta mas conseñable cu tumamentido di pildoran pa reduc' bo appetit. E manera bon y natural no tur ora ta e manera mas facil, pero bo salud no ta bal e esfuerzo!

HOW DID OUR EMPLOYEES REACT cont from page 4

Do you know if some of the recommendations made for your area were implemented?

No: 17. Yes: 9

What is your overall opinion of the sessions?
All answers indicated that the sessions had a positive reception.

CON NOS EMPLEADONAN A REACCIONÁ ... cont de pag 5

Bo tin algun sugerencia pa mejorá nos comunicacion arriba seguridad?

Mas publicacion (arriba accidente, "near-misses", reportaje di investigacion, reporte trimestral, sistema di "safety slip"); 6.

Mehora "safety talks" (mas, mas largo, mas regular y pa tu empleado); 7.

Mas contacto personal (durante bishita di seguridad di Gerencia, mas bishita di personal di seguridad den

planta, mas sesion); 7.

Otronan: p.c. competencia mensual di dicho di seguridad, envolvé contrataanan.

Bo a pensa ariba algun punto despues di e sessionnan cu bo kier pa wordo tratta?

Dies-cuatro sugerencia a set nichí, incluyendo. "pone reportaje di investigacion disponibel!", "mantene equipo den hon condicion di trabow", "haci sigui cu e material di seguridad ta disponibel". Tu sugerencia a ser pasá pa e Sección di Seguridad.

Bo ta na altura si algun di e recomendacionnan den bo area di trahow a ser haci kaba?

No: 17. Sí: 9.

Generalmente, kiko tahata bo opinion di e sessionnan?

Tur contesta a indicá cu e sessionnan a wordo ricibí positivamente.

MAY 1984

PROJECT REDUCES OPERATING COSTS

As part of the Light Ends Streamlining, three of the nine towers at the NFAR unit were shut down. The "Streamlined Light Ends Study" was conducted to find ways of streamlining operations and reducing costs.

In November of 1983, in an effort to upgrade the Lago operations, the Company embarked on a refinery-wide study, the "Refinery Streamlining Study", to find ways of streamlining operations and reducing costs. Part of that study was called "Streamlined Light Ends", which was particularly attractive because of the drastic decline in demand for Thermal Light Naphtha (TLN), a product used to blend in motor gasoline.

As a result of the Light Ends study, several Light Ends unit, such as the Alky Plant, and three of the nine towers at NFAR, were shut down without seriously disrupting the Company's processing flexibility. Upon completion of the project, all of the refinery's Naphtha will be processed in one Naphtha Hydrofiner (N2AR). This will result in the upgrading of TLN to Virgin Naphtha — which is more saleable as a chemical feedstock — and in improved butane recoveries from the fuel gas system. In order to maximize the return on this project this year, Management agreed to execute the project by a last track method instead of the more traditional sequential

approach. This, coupled with the excellent teamwork between the Operations and Technical departments, will result in a project realization time savings ranging anywhere from three to six months, according to Lee Scott, Process Designer.

(cont. on page 2)

Projecto ta reduci gasto di operacion

Na Novembre 1983, den un esueriso pa mejorá e operacionnan di Lago, e Compania a cuminzá arriba un estúdio di henter e refineria, e asina yáma "Refinery Streamlining Study", pa busca maneranan di simplificá operacionnan y reduci gasto. Parti di e estudio a wórdó

Project reduces...

(cont. from page 1)

"We also devoted a lot of attention to the safety aspects of operations," said Bruce Bloom, Project Development Section Head. "One third of the total cost of the project was specifically designated for safety improvement. This included the installation of an automatic cutout of the thermal lead to N2AR to prevent reactor temperature runaway."

"This project called for 'new ways' of operating the Light Ends, using the already existing equipment to operate the units differently," commented Omar Booij, who is responsible for technical assistance during the start-up phase of the project.

The construction phase of the Light Ends project, headed up by Roger Dussault, was completed in May.

Projecto ta reduci...

(cont. from page 1)

yama "Streamlined Light Ends", qual tabata particularmente atractivo pa via di e rebalto drástico den demanda pa "Thermal Light Naphtha" (TLN), un producto cu ta se usa pa "blend" den gasolin de motor. Como resultado di e estudio di Light Ends, varios unidadesnan di Light Ends, manca Alky Plant v tres di e nuchi torenan na NFAR, a wondó sacá lor di operacion sin cu esaki a desorganizá seriamente e flexibilidad di procesos de Compañia. Pa ora cu e proyecto terminá, tui e Naphtha di refineja lo wordo procesá den un Naphtha Hydrofiner (N2AR). Esaki lo resultá den mejoranza di TLN pa "Virgin Naphtha", pa qual tin mas benta como "chemica al feedstock", v melioracion den recobrimento di Butano lor di e sistema di combustible.

Pa maximizar e ganashí cu ta resultá di e proyecto aki e año aki, gerencia a bai di acuerdo pa chentá e proyecto arriba e método "last track", en vez di e metodo tradicional sequencial. Esaki, huncu cu e excelente trabajo colaborativo entre e departmentos Operations v Technical, lo resultá den finalización di e proyecto cu spanishato di tempo extendiendo di tres pasas hincha di acuerdo di Lee Scott, Process Designer.

"Nos a dedicá hopi atención tambe na e aspectosnan di seguridad di operacion," Bruce Bloom, Section Head di Project Development bisa. "Un tercera parti di e costo total di e proyecto tabata designá específicamente pa mejoranza seguridad. Esaki ta inclui e instalacion di un "thermal lead cutout" automático pa N2AR pa evita e temperatura di e reactor lo bai lor man."

"E proyecto tabata exigí mantenian noblo pa operacion di e Light Ends, usando e equipo ya existente pa operar e unidadnan diferente," Omar Booij, kende ta responsable pa asistencia tecnico durante e start-up phase di e proyecto, a bisa.

E "construction-phase" di e proyecto di Light Ends aki, encabezá pa Roger Dussault, a bin clá na Mei di e año aki.

A total of 36 employees of the HDS Fuels Division attended a 4-hour N2AR Streamlined Operation Training in May. The course was taught by Omar Booij of the Technical Department. The main purpose of the program was to teach the participants the new way of operating N2AR. On photo: one of the groups attending the course.

WELCOME...

— George P. Reynolds —

former Senior Advisor in the Logistics Division of EIA's Petroleum Products Department, to the position of Technical Department Manager at Lago and

— Jossy M. Laclé —

former Maintenance Division Superintendent at Lago to the position of Public Affairs and Planning Advisor.

PROMOTIONS

Ambrosio Geerman, left, and Marciano Marchena, right, were recently promoted to Lieutenant in Lago's Industrial Security Department.

ANNIVERSARY...

Gregorio Danies, on left photo, and Alejio Kelly, on right photo, recently received a certificate from the Operations Programming and Marketing Department Manager, John Every, when they completed their 30th service anniversary. Congratulations to Gregorio and Alejio.

Exxon results 1st quarter '84 increased with 39.2% from '83

Exxon Corporation estimated first quarter net income at \$1,475 million, up 39.2 percent from a total of \$1,060 million in the 1983 first quarter. Revenue totaled \$24,906 million in the most recent quarter, up 5.1 percent from \$23,705 million in the first quarter of 1983.

Garvin Comments

Exxon Chairman C.C. Garvin, Jr. had the following general comments on the first quarter results:

"The strong earnings growth relative to the depressed early 1983 period reflects improved economic conditions and solid operating performance as well as continued emphasis on cost control. Colder weather in this year's first quarter increased seasonal demand and world crude prices remained relatively stable.

"Higher earnings were experienced in almost all of Exxon's business segments. Increased production of crude oil and natural gas was a major factor. In addition, prior year rationalization steps permitted us to participate actively on a competitive basis in the increased demand generated by the broad based economic recovery. This resulted in earnings gains in the petroleum and chemical segments and Reliance electrical equipment."

Commenting on the earnings of the major business segments, Mr. Garvin continued:

"Earnings from **U.S. exploration and production operations** were \$551 million, up \$39 million from the 1983 first quarter. Increased natural gas deliveries and improved prices for gas helped offset higher exploration and development expenses. The first quarter 1983 earnings reflected a provision of almost \$100 million for certain regulatory DOE (Department of Energy) matters.

"Earnings from **U.S. petroleum refining and marketing operations** rose from breakeven in the 1983 first quarter to \$61 million in the most recent quarter. A four percent increase in the volume of petroleum product sales accounted for most of the improvement, led by heating oil and motor gasoline sales gains. Lower raw material costs and operating cost reductions also contributed to the earnings gain, but were somewhat offset by lower selling prices in the highly competitive market environment.

"Earnings from **foreign exploration and production operations** went up by \$144 million to \$730 million in the first quarter 1984, as a result of higher production. North Sea crude oil production was at record levels, up 59 thousands barrels per day (KBD) to 418 KBD. Gas volumes also increased, primarily in Europe. In the Far East, Australian and Malaysian crude oil production continued to increase, rising 67 KBD to 310 KBD.

"Earnings from **foreign petroleum refining and marketing operations** were \$116 million, up from \$92 million in the 1983 first quarter. Strong demand in major markets abroad contributed to a six percent increase in petroleum product sales volumes. Margins remained depressed and were similar to first quarter 1983 levels; however, recent dollar weakening and corresponding reductions in local crude oil supply costs of overseas affiliates provided some improvement.

"Worldwide chemicals earnings totaled \$121 million in the first quarter of 1984, up \$89 million from the 1983 first quarter. The economic recovery, both domestically and abroad, was a major factor in the earnings growth. In the U.S., a 40 percent increase in sales volumes raised earnings to \$34 million. Abroad, earnings were up due to 25 percent higher sales volumes and better margins.

"Worldwide capital and exploration expenditures totaled \$1,541 million in the 1984 first quarter, down 34 percent from the 1983 first quarter. Expenditures in the U.S. totaled \$650 million, down 45 percent. A major factor in the decline in expenditures was the absence of oil-shore lease purchases in the first quarter of 1984 compared to \$250 million in 1983. For the full year 1984, it is expected that worldwide expenditures will be about \$9.5 billion, up from \$9.0 billion in 1983.

"Reliance Electric Company operations earned \$5 million in the first quarter of 1984 contrasted to the \$16 million loss incurred during the first three months of last year. Sales increases of 13 percent, along with cost reductions, contributed to the upturn."

Aumento di 39.2% den entrada di Exxon

Exxon Corporation a ~~comenzado~~ comenzañan den pa e prome trimestre di 1984 na \$1.173 million, un aumento di 39.2% tempora cu total di \$1.060 million den e prome trimestre di 1983. E ingreso total den e prome trimestre mas recien tabata \$24.906 million, un aumento di 5.1% compará cu \$23.705 million den e prome trimestre 1983.

Gavin ta Comenta

Presidente di Exxon C. C. Gavin, Jr. a dina e siguiente comentarionan general ariba e resultacionan di e prome trimestre:

E aumento fuerte di ganashi relativo na e periodo di presto na comunitamento di 1983 ta telleha mejoracion di e condicionan economico y funcionamiento sólido di operacion hundo cu e énfasis continuo arriba control di gastonan. Temporan mas fuicu den e prome trimestre die año aki a aumenta e demanda pa e temporaña aki y preisan di crudo rond di mundo a keda relativamente stabiel.

Ganashi tabata más halto den casi tutti segmentonan di negocio di Exxon. Aumento den producion di crudo y gas natural tabata sin la tor principal. Adicionalmente, posicon di racionalidad den e año anterior a permitio posparcepa áctivamente arriba un base competitivo den e suministro de demanda, generá doos di e recuperacion economico arriba un base amplio. Esaki a conduci na aumento di ganashi den segmentonan di petroleo y químico y equipo electrico di Reliance.

Comentando ariba e ganashi di e segmentonan principal di negocio, Sr. Gavin a continua:

"Ganashi di e **operacionnan di exploracion y produccion na Merca** tabata \$551 million, un aumento di \$79 million compará cu e prome trimestre 1983. Un aumento den entrega di gas natural y mejoracion den prestan di gas a vista compensa e aumento di gastonan di exploracion y desarollo. E ganashi den e prome trimestre di 1983 ta telleha un provision di casi \$100 million pa cierto asuntoñan regulatorio di e Departamento di Energia.

Ganashi di **operacionnan di refinacion y benta di petroleo na Estados Unidos** a subi di un "break-even" den e prome trimestre di 1983 pa \$61 million den e trimestre mas recien. Un aumento di cuatro porciento den e volumen di benta di producionan di petroleo a petroina pa mayoría di e mejoracion, encabezó pa aumentonan den benta di "heating oil" y gasolin pa motor. Gastonan mas alto pa materiajan prima y reducion di gastonan di operacion també a contribui na aumento di ganashi, pero a worto influencia pa pessenan di benta mas abao riba e mercado somamente competitivo.

"Ganashi di **operacionnan di exploracion y produccion den exterior** a subi cu \$144 million te \$740 million den e prome trimestre 1984, pa motivo di producion mas halto. Producion di crudo di Norteamérica tabata na un nivel record, y a subi cu 59 mil baril pa dia te 418 mil baril pa dia. Volumenan di gas tambe a subi, pa principalmente na Europa. Na Lejano Oriente, producion di crudo na Australia y Malasia a sigi aumentá, subiendo 67 mil baril pa dia te 310 baril diaio.

Ganashi di **operacionnan di refinacion y benta di petroleo den exterior** tabata \$116 million, un aumento di \$92 million compará cu e prome cuarto di 1983. Un demanda grandi riba e mercadonan principal den exterior a contribui na un aumento di seis porciento den e volumen di benta di producionan di petroleo. Margennan a keda tehahá y tabata igual na e nivel di e prome trimestre di 1983; sinemaha go, debilitacion recien di dollar y reducionnan correspondiente den gastonan local di suministro di crudo di afiliacionan den exterior a percurá pa algun mejoracion.

"**Ganashi mundial di productonan químico** a suma na \$121 million den e prome trimestre di 1984, un aumento di \$89 million di e prome trimestre di 1983. E recubo economico, domesticamente y den exterior, tabata e factor principal den e aumento di ganashi. Den E.U., un aumento di 40% den venta a hisa ganashi cu \$54 million. Den exterior, ganashi a subi pa motivo cu venta tabata 25% mas halto y doos cu tabatin mihor margennan.

"E total di **gastonan di capital y exploracion rond di mundo** tabata \$1541 million den e prome trimestre di 1984, un rebaho di 34 porciento compará cu e prome trimestre di 1983. Gastonan total na Estados Unidos tabata \$650 million, un rebaho di 45%. Un factor mayor den e rebaho di gastonan tabata cu no tabata tin "offshore lease purchases" den e prome trimestre di 1984, compará cu \$250 million na 1983. Pa hentei e año 1984, ta worto sperá cu gastonan rond di mundo lo ta aproximadamente \$9.5 billion, un aumento lor di e \$9 billion na 1983.

"**Operacionnan di Reliance Electric Corporation** tabata tin un ganashi di \$5 million den e prome trimestre di 1984, contrastante na e perdida di \$16 million sufri durante e prome tres lunanan di año pasá. Aumentonan den benta di 13 porciento, hundo cu reducion di gastonan, a contribui na un cambio favorable.

Peter Storey, a 38 year veteran of the Esso Tennis Club was recently honored with a special Round Robin Tournament. Peter left to Wyoming with his family, where he will enjoy a well-earned retirement.

JOGGING

fun but hazardous

by Dr. Crook

*divertido pero
peligroso*

In the past few years, thousands of people of all different ages and types have taken up jogging. If you are one of these people or are thinking about starting a jogging program, there are some basic things you should know. Joggers jog for many reasons. Some do it for the increased fitness and sense of well being. Others do it to lose weight or in the belief that it will help them to live longer. There is evidence that people, especially men, who exercise regularly, live longer than those who do not. **The main benefit of jogging** is that it strengthens your heart and lungs. But, if you want to jog to lose weight, you have a long way to go: about 120 kilometers to burn up one kilogram of fat. Jogging can help in a weight loss program, but a diet is more important. And any effort to increase sweating while jogging in the hopes of increasing weight loss is not only foolish, but dangerous.

In fact, **overheating is one of the major hazards** of jogging in Aruba, especially for people who are not acclimatized. The best time for jogging is in the early morning or late evening. Clothing should be light, loose, and brief. An adequate intake of water is also important. It is best to **start off by jogging three days a week**, for about 15 minutes, and to increase the time and the frequency as your endurance increases. The pace should be a "talking pace", that is, you should be able to talk to a companion without feeling out of breath while you jog. **A number of minor injuries occur** to joggers because of overuse of muscles and ligaments which are not used to the exertion. It is a good habit to do a series of stretching exercises before starting to jog, and afterwards to take a cooling off walk.

One of the **advantages of jogging** is that it does not require a special location or equipment. However, a number of irritating problems can be avoided by investing in good quality running shoes and by jogging on a smooth level and soft surface. Likewise, some simple exercises to strengthen the muscles of the feet and legs can help to ward off injuries.

Almost everyone can jog. People with heart disease or other serious medical problems and people over 50, should consult their doctor before starting a jogging program. **Jogging can be a valuable and enjoyable activity if one is aware of the risks, and takes the necessary steps to avoid them.**

Den el ultimo añanan miles di hende di diferente edad y tipo a cuminza cu "jogging" i esta coremento na una velocidad moderada. Si abo ta un di hendenan akordi oba pensando di cuminza cu un programa di jogging, tin algun cos basico cu be mester sa.

Hendenan ta jog pa diferente motivo. Algun ta hace pa nan ta mas fit y pa nan sinti mihi. Pero ottonan ta hace pa baha peso ois pasobla cu nan ta kete cu e ta lagu nan baba mas largo. Tin prucha cu hendenan, especialmente hende hombre, cu ta haci exercicio regularmente, ta baba mas largo cu estan cu no ta haci ejercicio.

E beneficio principal di jogging ta que ta fortalece bo curazon y bo pulmonian. Si bo kier jog pa perde peso debin un caminada largo pa baha aproximadamente 120 kilometre pa bo kima sin kilogram di vete. Jogging por jude ora di baha peso, pero un diet ta mas importante. Y qualquier esfuerzo pa aumentar sodamiento durante jogging cu e speranza di aumentar perdida di peso, no solamente ta algo bobo pa hacer, pero tambie peligroso.

En electo, **sodamento di mas ta un di e peligernan mas grandi** di jogging aki na Aruba, especialmente pa hendenan cu no ta acclimatado. E mihi ora pa jog ta mainta tempran di anochi laat. E paña cu ta wordo bista no mester ta pisá, ni pietá, y e mester ta cortico. Bebimento di awa tambe ta importante.

Ta mihi pa cuminza cu jogging tres bez pa siman, pa mas ol menos 15 minuitos, y pa aumentar el tempo si gana bo resistencia aumenta. E paso segun cu tal bo ta correr mester ta un "talking pace", esta cu bo mester pa papá cu un compañero sin cu bo ta sinti lalta di nosca mientas cu bo ta jog.

Hendenan cu ta jog ta haña **un cantidad di heridanan menor** pa via cu nan ta uza nan musculonan y ligamentonan, cu normalmente no ta wordo nza, di mas. Ta un bon custumber pa hacer un serie de ejercicio pa keinta cuipta promé cu bo cuminza jog, y despues cana pa bu fina bek.

Un dia **bentahanan di jogging** ta que no ta requiere un lugar o equipo special. Sineñaburgo un cantidad di problema por wordo evitá doer di gasta placa na un bon par di keds y elor di jog arriba un superficie fisivo nivelá igualmente, algun di e ejercicionan simple pa fortificá musculonan di pia por evitá heridanan. Casi tu hende por jog. Hende cu tin enfermedad di curazon o otro problema di salud, y estan cu mas di 50 aña, mester consultá cu nan dokter promé cu nan cuminza cu un programa di jogging. **Jogging por ta un actividad valioso y divertido, si bo ta na haultura di e riesgonan y tuma e pasonan necesario pa evitá nan.**

In the first quarter of this year, Lago introduced the Cardkey system in its office buildings. The hardware involved includes a closed circuit t.v. at Gate no. 3, intercoms at the office buildings and a Control Unit at Gate no. 3. The Control Unit consists of a Dialog VDT (Video Display Terminal) and an Alarm VDT. The Dialog VDT is used to program cards, open doors and is also a good investigating tool. The Alarm VDT and printer shows all irregular card transactions, registers all alarms and even displays a map of the office buildings.

On left photo, Johnny Croes, a Corporal in the Industrial Security Department is entering a code on the Dialog VDT while Oslin Boekhoudt, an engineer in the Technical Department, right photo, is using his cardkey to gain access to the GOB.

Secretaries' Day

Lago secretaries enjoyed themselves at a reception held at the Esso Club in their honor on Secretaries' Day. Lago Management was the host.

VOLUME 45 — NO. 6

JUNE 1984

On or off the job:

SAFETY DOES NOT HAVE LIMITS

So you thought you were safer off work than at work? Well you are wrong . . . Statistics show that in 1983 only two disabling injuries (DI's) occurred on the job, while 129 DI's occurred off the job. Furthermore, those 129 DI's resulted in a total of 790 man-days of lost time during 1983 which is equivalent to about three man-years of work. After five months in 1984 we have had 32 off-the-job DI's with 426 lost man-days. If this trend continues, we could expect one out of every twelve employees to have an off the job disabling injury in 1984. A little disconcerting isn't it? Obviously, we do not pay as much attention to safety off the job as we do on the job.

To tackle this problem, an Off-the-job Safety Sub-Committee was appointed by Lago's Central Safety Committee earlier this year. Said Jerry Bailey, Fuels/HDS Division Superintendent, and a member of the sub-committee: "Our desire is zero accidents which we know we

probably will not achieve, so our goal is at least to minimize the number. Lago does not have any means of direct control over causes of off the job accidents. Only we as individuals can exercise control. Our job at work then is to make employees aware of the seriousness of the situation and to emphasize the need to take care outside the job environment".

To accomplish this, the sub-committee developed an Off-the-job Safety Campaign involving employees, the Union, the family and the community at large. At work, promotion of off-the-job safety has already been initiated by including off-the-job safety tips in the safety talks, and placing posters and signs in the refinery. Off-the-job safety statistics and tips will also be published through the Company's publications. To reach the employee homes and the community in general, the sub-committee plans to produce television spots, stress off-the-job safety in publications and hold a family safety fair sometime this fall. The IOWUA has plans to cooperate by emphasizing off-the-job safety in its safety seminars and general meetings. "We have to understand," said Jerry. "That it is not management telling us that we should pay attention to safety off the job, but we are telling each other. If it works on the job, it should work off the job."

Then why doesn't it? Why are there so many slips, falls, burns, cuts, sport related injuries and traffic accidents? Perhaps one of the reasons there are more off-the-job than on-the-job accidents is that the peer

SAFETY OFF-THE-JOB STARTS HERE! OFF-THE-JOB INJURIES INJURIES DAYS LOST

LAST MONTH	32	426
YEAR-TO-DATE		

The amount of off-the-job injuries and lost time are now posted at the gates to keep employees abreast of the off-the-job safety situation.

The ARUBA ESSO NEWS is published for all Lago employees. Please contact the Editor for permission to reprint or reproduce any portion of this magazine.

Editor: Myrna Jansen-Feliciano

pressure present at work is lacking at home. Moreover, once you leave the refinery gates at the end of the day, you tend to forget the constant reminders from newsletters and supervisors to use the proper tools, not to take unsafe shortcuts and to wear proper protective equipment. Furthermore, we do not have a supervisor to give account to at home. In other words, off the job it is easy to forget about safety.

But you know . . . whether you are injured at home or at work, the effects of an accident remain the same: pain, sorrow, burden on the family, perhaps a permanent handicap. And let's be realistic: accidents are expensive considering the medical treatment and loss of manpower involved. Concerning the latter, Jerry said, "we cannot afford to miss people at work. We need everybody on the job, reaching goals together. When our fellow workers are injured anywhere, it causes concern among everyone. A healthy, happy workforce is a productive team."

The message is simple: Safety does not have limits! Whether we are on the job, on the road or at home, our care for safety should be a high priority.

As part of the general year-around safety training, employees are taught the use of the Self Contained Breathing Apparatus. About 60 employees participated in the most recent session, taught by Simon Geerman of the Safety/Industrial Hygiene Section and Pedro Rammijn of the Industrial Security Department.

Na trabao of pafor di trabao:

SEGURIDAD NO TIN LIMITE

Antó b'a kere cu bo ta mas sigur pafor di trabao cu na trabao? Wel, bo ta equivocá . . . Estadisticanan ta mustra cu na 1983 solamente dos herida incapacitante (Disabling Injuries = DI) a tuma lugar na trabao, mientras cu 129 DI a tuma lugar pafor di trabao. Ademas, e 129 DI-nan a resultá den un total di 790 dia obreril perdi durante 1983 cual ta equivalente na mas o menos tres año obreril. Despues di cinco luna na 1984 nos tabata tin 32 DI pafor di trabao cu 426 dia obreril perdi. Si e tendencia aki sigi, nos por spera cu un den cada 12 empleado lo sufrí un herida incapacitante pafor di trabao na 1984. Un

poco desconcertante, no ta 'sina? Evidentemente nos no ta pone tanto atención ariba seguridad pafor di trabao manera nos ta haci ora nos ta na trabao.

Pa atacá e problema aki, un "Off-the-job Safety Sub-Committee" a wordo nombrá pa e "Central Safety Committee" di Lago den curso di e lunanan cu a pasa. Manera Jerry Bailey, Superintendent of Fuels/HDS Division y miembro di e sub-committee a bisa: "Nos deseó ta sero accidente, locual nos sa cu probablemente nos lo no logra, pesey nos meta ta pa a lo menos reduci e cantidad na un mínimo. No tin ningun manera pa Lago tin control directo ariba e causanan de accidentes na pafor di trabao. Solamente nos como individualnan por ejercer control. Nos tarea na trabao ta pa haci empleadon consciente di e seriedad di e situación y pa enfatizá e necesidad pa tene cuidao pafor di ambiente di trabao."

Pa logra esaki, e sub-committee a desaroya un "Off-the-job Safety Campaign" envolviendo empleado-nan, e sindicato, e familia y e comunidad den su totalidad. Na trabao, promoción di seguridad pafor di trabao a wordo iniciá caba door di inclui informeren pa seguridad pafor di trabao den e "safety talk" nan y colgando poster y borchinan den refineria. Estadisticanan di seguridad y conseñonan pi seguridad pafor di trabao tambe lo wordo publicá pa medio di publicacionnan di Compania. Pa penetrá den cas di empleadon y comunidad en general, e sub-committee tin planeá pa

produci "spot" nan di television, enfatizá seguridad pafor di trabao den publicacionnan y tene un feria di seguridad pa familia den otoño di e año aki. IOWUA tin planeá pa cooperá door di enfatizá seguridad pafor di trabao den su seminarianon di seguridad y reunionnan general. "Nos mester comprendé", Jerry a bisa, "cu no ta gerencia ta bisando nos cu nos mester pone atención ariba seguridad pafor di trabao, pero nos ta bisando nos compañerónan. Si e ta dunando resultado na trabao, e mester por duna resultado pafor di trabao.

Anto ta pakiko e no ta logra pafor di trabao? Pakiko tin tanto slípmiento, caimento, kírimento, cortamento y heridanán relacioná cu deporte y accidentenan di tráfico? Por ta cu un di e motibonan cu tin mas accidente pafor di trabao cu na trabao mes ta, cu a presión di compañerónan na trabao no ta existi na cas. Mas ainda, ora bo sali for di e portanán di refinería na final di e dia di trabao, bo tin e tendencia di lubidá e recordatorianon constante di bolénnan y di supervisornan pa uza e hermentnan corecto, pa no tuma "shortcut" cu ta insigur y pa bisti e equipo protectivo apropiá. Ta bin acerca, cu nos no tin un supervisor na cas cu nos mester duna cuenta na dje. Den otro palabra, pafor di trabao ta facil pa lubidá tocante seguridad.

Pero bo sa . . . sea cu bo ta wordo heridá na cas of na trabao, e efecto-nan di un accidente ta keda mescos: dolor, tristeza, peso ariba e familia, y por tā un handicap permanente. Y laga nos ta realistico: accidentenan ta caro, considerando e tratamiento medico y e perdida di "manpower" envolvi. Relacioná cu e ultimo aki Jerry a bisa, "no no por permití nos mes pa falta hende na trabao. Nos tin mester di tur hende na trabao, logrando metanan hunto. Si nos compañerónan di trabao worde heridá cualquier caminda, e ta pre-ocupá tur hende. Un forsa obreril saludable y contento, ta un team productivo."

E mensaje ta simpel: Seguridad no tin límitel. Sea cu nos ta na trabao, ariba caminda de na cas, nos atención pa seguridad mester ta un prioridad grandi.

Nine officers of the Industrial Security Department received a promotion during the month of June. From left to right: Alvin Arrendell and Stanley Edwards promoted to Sergeants; Jose Del R. Nava promoted to Senior Corporal; Floriano Razmijia and Joseph Halley promoted to Sergeants; Johnny Croes promoted to Administrative Clerk; Anthony Chirino, promoted to Senior Corporal; and Captain Frederick Brooks. Not on the photo are Rufino Ruiz who was promoted to Senior Corporal and Ronald Leito, who was promoted to Sergeant.

'84 SEABIRD BREEDING BEST ON RECORD

"More and more people have begun to realize that in season (April-August) the Lago reef islands harbors a seabird population that is unique and unexcelled in the Southeastern Caribbean." That is what Ruud van Halewijn, a Dutch biologist specialized in the study of Caribbean seabirds, concluded on the basis of his recent three-week survey of species and numbers of breeding seabirds on the Lago refinery.

According to Mr. van Halewijn, who was sponsored by the STI-CUSA and the Van der Hucht fund, this year's breeding season is the best on record: more different species were found (eight versus seven in prior years) and the estimated amount of pairs of each species are also larger this year. The Cayenne (or Yellowbilled Sandwich) Tern, which is a relatively rare and little known tern species, is the most numerous on the island, with circa 3500 pairs. As a matter of fact, its colony on the Lago reef islands is by far the largest in the world known to science.

One species that was discovered nesting on the Lago reef island this

Cayenne
Tern Colony
largest known
to science

year for the first time is the Laughing Gull. Twelve pairs were observed. "These Laughing Gulls," says Mr. van Halewijn, "appear to be quite skilled in the art of snatching eggs from the nests of the Cayenne Tern Colony when the nests are left unguarded by the parent bird." Apparently, these gulls work in groups, harrassing incubating birds until the birds briefly flush from their nests, and in doing so, expose their eggs. Amidst all the havoc brought about, one of the gulls rapidly flies away with a tern egg in its bill and cracks it open to consume its contents outside of the tern colony area. In the absence of systematic egg collecting by humans this year,

CUTTING COSTS

NOT
AT ALL...

Little Things Add Up

SMALL ITEMS
OF WASTE
REACH
SURPRISING
TOTALS. WHAT
ARE YOU DOING TO
STOP THEM?
YOU CAN HELP!

"Little things add up." For most of us, that is the key to successfully cutting costs. Whether we are seeking ways to cut costs at home, or on our jobs in the refinery, the way to do so is by studying all the little things. The huge size of the refinery, and the large quantities of supplies it uses, tend to make us forget that we, as individuals, can do a great deal to save time and materials. Too often, in looking for ways to cut costs, we think too big. It's all right to try to think of ways to save a million guilders a year - but most departments are so well-organized that it's practically impossible to find a way to save that large a sum all at once. It's necessary to dig and find the many little things that add up to big figures.

It's often a case of being unable to see the trees for the forest. We look so hard for the single big expense that we fail to see the many small expenses that are everywhere around us.

Small items of waste add up to large totals in a year. Are you looking around, and seeking ways to cut these small items that add up to large figures?

"Hopi chikito ta huec un grandi". En la frase cu mayoría de nos mester esto no basta si nos ke mengua costo. Ses cu nos ta tratar na mengua costo, na cas de nos nos job den astemina e modo de huec ta di estudio e trabajar bienman chikito. E tamaño enorme di refineria, y e cantedad grandissimo di material cu e ta usa, ta pone nos jibida cu nos, individualmente, por huec hopi pa spaar tempo y material. Mucho vez, buscando modo de mengua costo nos ta busca mucho leewa. Ta mascha bon si poi u haya un modo de spaar algun milion florin pa anjo, pero mayoría di departamento

nan la asma nos organiza cu la prácticamente imposible pa spaar un suma grande asma di un solo vez. Ta necesario pa busca y studia e cos nan chikito cu ta montona bila gran di.

Tan brana cu nos ta busca di hoy ya un falta grandi cu ta causa hoy gasto, y haciendo esey nos ta perdi los besta e cantidad di gastonan el kito cu nos ta rend di nos.

Gastonan chikito ta montona biki promé cu bu zu. Yo ta tira b ronda di bo buscando gastonan ch ki o cu ta bira sumanan grandi? Bu contrubui po parti pa mengua con

FAD OF THE '80'S?

WHAT LITTLE THINGS?

How about nuts and bolts? If you ask anybody that spends some time in the plant what he thinks is the most wasted item, he will tell you: nuts and bolts. It's so easy: they look old, insignificant, dirty, and do not seem to cost much anyway . . . But as the article says, little things add up! To give a real example: in 1952, when a shortage of bolts in the Storehouse threatened to stall a unit turnaround, a search for bolts was started in the then called Cracking Plant area. A total of 2000 bolts were found of which 1000 were still useable. If we went around the plant today, how many would be found????

Nuts and Bolts
can add up to money
for your company.
Look around. You'll
find a many uses
in your plant.

Unit price
Naf. 8.73

Unit price
Naf. 5.65

Unit price
Naf. 2.81

In cooperation with the Storehouse, we found out that in 1983 alone, about 140,000 nuts and bolts of different kinds, sizes and prices were issued for either routine or project work. These 140,000 nuts and bolts costed approximately Naf. 260,000. If only one out of every ten nuts/bolts were left lying around, thrown in the Scrap Yard or misused in some other way, a total of about Naf. 26,000 would have been was-

ted! . . . Not an insignificant amount of money. And that is only on nuts and bolts! Not to think of valves, gaskets, sawblades, paint, notebooks, just to name a few. Add them all up and the seemingly "little things" will be converted into a huge amount. The same question stated in the 1950 Esso News article can again be raised today: What are you doing to cut costs in your environment?

SEABIRD BREEDING

Cont. from page 3

it seems that these activities of the Laughing Gulls account for nearly all loss of eggs in the Cayenne Tern colony, said Mr. van Halewijn.

Other species found nesting on the reef islands are the Roseate Tern, 70 pairs; Common Tern, 35 pairs; Bridled Tern, 30 pairs; Sooty Tern, 350 pairs; Least Tern, 50 pairs; and the Brown Noddy Tern, 6 pairs. All of the tern colonies are confined to the Lago refinery area except for the Common and Least terns which also nest elsewhere in Aruba.

STINAPA - Aruba in cooperation with several departments of Lago have contributed to the success of this year's breeding season, according to Mr. van Halewijn. Signs were placed on the island as well as ashore reminding persons that it is illegal to disturb the breeding population and to collect their eggs. A publicity campaign was also launched in the local newsmedia to create more awareness of the seabird situation among the public.

STINAPA - Aruba in collaboration with experts in Holland has already made plans for a more comprehensive seabird protection and study campaign next year. Said Mr. van Halewijn, "if the seabirds are left alone for the rest of this breeding season it is likely that there will be even more pairs breeding next year."

Aruba should be conserved as a seabird breeding paradise of international importance, commented Mr. van Halewijn. Since persons unfamiliar with bird studies upset the breeding colonies, they should not set foot on the Lago reef islets. Nature lovers who wish to observe the seabird species nesting there, can bring a pair of binoculars and sit by the Dog's Cemetery to enjoy the show . . .

RECORD DI PARHA DI LAMAN NA '84

"Mas y mas hende a cuminza realizá cu den temporada (April-Augustus) ariba e islanan di rif di Lago tin un poblacion di párhnan di laman ta hospedá cu ta unico e insuperable den parti Streste di Caribe." Esey ta loke Ruud van Halewijn, un biólogo Hulandes specializá den estudio di párhnan di laman di Caribe, a conclui a base di su estudio di tres siman haci recientemente di e especianen y e cantidad di parhanan di laman cu ta broei na e refineria di Lago.

lanta for di nan neishinan un rato, y asina lagando nan webonan descubri. Den tur e desorden cu ta wordo causá, un di e Gull nan rapidamente ta bula bai cu un webo di meeuwchi den su piek pa e kibré y habré pa consumi e contenido pafor di e area di e colonia di meeuwchinan. Cu e ausencia di collectament sistematico di webo door di hende e aña aki, ta parse cu e actividadan aki di e Laughing Gull nan ta cau-sante di casí tur e perditanan di webo den e colonia di meeuwchi

Colonia di meeuwchi Cayenne mas grandi conosi pa ciencia

Segun Sr. van Halewijn, kende a wordo patronisá pa STICUSA y e fondo Van der Hucht, e tempora da di broei di e aña aki ta esun mihor segun record: mas diferente especianen a wordo hanjá (ochos versus siete den e afianan anterior) y e cantidad calculá di parehanan di cada especie tambe ta mas grandi e aña aki. E Cayenne (of Yellow-billed Sandwich) Tern, cual ta un especie di meeuwchi di laman cu ta relativamente raro y poco conoci, ta esun más numeroso ariba e isla, cu alrededor di 3500 parea. Realmente e colonia ariba e islanan di rif di Lago ta esun mas grande cu ciencia conoce.

Un di e especianen cu a wordo descubri di ta traha neishi ariba e isla di rif di Lago e aña aki pa prome biah ta e asina yama Laughing Gull. Di esakanin 12 paar a wordo observá. "E Laughing Gull nan aki," Sr. van Halewijn ta bisa, "ta parse di ta bastante habil den e arte di rapta webonan di neishinan di e colonia di meeuwchi Cayenne si e parentenian laga e webonan sin vigilancia." Aparentemente e Gull nan aki ta traha den grupo, tormentand parhanan cu ta broei te ora cu esakanin

Cayenne. Otro especianen cu a wordo hanjá ta broei ariba e islanan di rif ta e Meeuwchi Rosado, 70 paar; Meeuwchi Comun, 35 paar; Meeuwchi cu Freno, 30 paar; Meeuwchi Manchá (color surc), 350 paar; Meeuwchi Chiquito, 50 paar; y e Meeuwchi Brown Noddy, 6 paar. Tur e colonianan di meeuwchi ta wordo hanjá solamente den e area di refineria di Lago cu excepcion de Meeuwchi Comun y e Meeuwchi Chiquito cualnan ta traha neishi na otro lugarnan na Aruba tambe.

STINAPA - Aruba den cooperacion cu diferente departamento na Lago a contribui na exito di e temporada di broei di e aña aki, segun Sr. van Halewijn. Borchinan a wordo poní ariba e islanan y na tera, cordando tur hende cu ta ilegal pa stroba e poblacion cu ta broei y pa colecta webonan. Un campana di publicidad a wordo lanzá den e medianan di noticia local pa asina publico ta mas consciente di e situacion di parhanan di laman.

STINAPA - Aruba den colaboracion cu expertonan na Hulanda ya

caba a traha plannan pa un proteccioon mas amplio di parhanan di laman y un campana di estudio otro aña. Sr. van Halewijn a bisa, "si e parhanan di laman wordo lagá na paz pa e sobrá di e temporada di reproducción aki, ta probable cu lo tin mas paar ta broei otro aña."

Aruba mester wordo conservá como un paraíso di reproducción pa parhanan di laman di importancia internacional, Sr. Van Halewijn a comentá. Como cu personan cu no sa nada di estudian di parha, lo stroba e reproducción di parhanan, nan no mester pone pia arriba e islanan di rif di Lago. Esnan cu gusta naturaleza y cu kier observa e especienan di parhanan di laman cu ta traha neishi eynan, por bini cu un paar di "verrekijker", sinta na Santana di Cacho y disfruta di e how . . .

Testing the new noise dosimeter used in the most recent Industrial Hygiene survey of Lago are, from l to r, Juan Noguera and Rusette Arends from Lago's Safety/Industrial Hygiene Section; Dan Agopnowics, of the Research Environmental Health Division (REHD) of Exxon Corporation, Hugo Morafioti, Esso Inter America; Robert Confer of REHD and Simon Geerman of Lago's Safety/Industrial Hygiene Section.

LAGO'S FIRE FIGHTERS ORGANIZE FAMILY DAY

In June Lago's Volunteer Fire Fighters organized a family day on the Lago Fire Training Grounds. Family members had the opportunity to don on the fire fighting costumes and put on a fire fighting show. The fire trucks and other equipment were put on display for inspection by the visitors. It was a fun and educational outing for the family members.

Over 360 Lago oilmen and their families from overseas travelled to Aruba in June for a reunion. The cocktail party held in their honor at the Esso Club was a good occasion for them to get reacquainted, make new friends and get to know some of Lago's managers. Photo below: Bob Nougé, Lago's Operations Manager; Mrs. Yolanda Griffin; Lago oilmen Mr. Frank Griffin and Mr. Iola Tjim-Tham-Sjin. Mr. Griffin, who had worked at Lago from 1929 to 1959, was General Manager and executive Vice President of Lago from 1956 to 1959. Left photo: Padu Maduro of the Industrial Security Department, providing entertainment for the visitors, accompanying the "cohó di orge" with the "wirí", something he enjoys doing in his spare time.

ARUBA

Lago Oil & Transport Co., Ltd.

Aruba, Netherlands Antilles

VOLUME 45 - NO. 7

JULY 1984

Mr. Naugle:

MAJOR CHALLENGE: MAKE LAGO MORE COMPETITIVE

Q: I see all three divisions have almost 30% less employees than at the January 1st, 1983 Operations. However, about 2/3 of the remaining 1,000 people are under your department. What has been done by Lago to date?

A: At first, we had positive results during the initial 1½ years. We have gone from a company of 3000+ positives to a company of 1000 negatives because the organization of the company has changed with centralized and more integrated management. Early on, there were projects completed very successfully. The original idea was to hold each business unit responsible for their areas.

Q: What has Management done to change its own operations?

A: One of the things we had to do was to streamline operations. We have streamlined without compromising our ability to meet our commitment. As a result of our streamlining, we are running three out of four pipelines, one or two vacuum units, one and sometimes two of our three reformers, two of the three Hydrofining plants, two of the three sulphur units. In addition, significant reductions were made in the Light Ends operation by shutting down our Alkylation Unit, a Naphtha Hydrotreater and several Light Ends towers. Furthermore, 25% of our tankage facilities have been removed from service as well as

Mr. Robert Naugle
Operations Department Manager

Mr. Robert Naugle, Lago's Operations Department Manager, has been with us since January of 1983. In that year and a half, Mr. Naugle has had to steward a number of transitions, changes and reorganizations in what may be termed Lago's most difficult period of operations. In the following interview, Mr. Naugle talks about those changes: the accomplishments, disappointments, management actions and employee reactions.

two of our five fingerpipes and refineries.

Q: Can you think of some other actions Management took?

A: Yes. We have also encouraged all levels of the organization to try to assume more responsibility for their operations and to make or suggest as many improvements they can. Even with limited manpower and a tighter budget, we believe there are still many improvements that can be made if we can get the entire organization's help in defining and implementing them. To help accomplish this, as you know, we merged three Mechanical Divisions into two and four Process Divisions into three. We also combined the Mechanical and Process departments into one Operations Department. All of this was done to make it a more effective team. Today, we can say this has resulted in improved teamwork and greater ability to accomplish jobs at a faster pace and lower cost. Along with the excellent assistance and cooperation we receive from the Technical people, we have formed a very effective Process - Mechanical - Technical team.

Q: As we can see, Lago employees, especially those in your department, have been through some major changes and reorganizations since January. Many have had to work overtime, work a different job, deal with different problems than they were used to and take on more responsibilities on their jobs. These situations can be stressful at times. In your opinion, how have the employees reacted to these situations so far?

A: The challenges that Lago has faced this year are challenges that an organization is seldom required to deal with in such a limited period of time. Our people have done an outstanding job in meeting these challenges! And not only that, they have also demonstrated better operations as shown by the long runlengths on our pipelines and the vacuum units. The successful start-up of some major projects was also a significant accomplishment. In a short period

The ARUBA ESSO NEWS is published for all Lago employees. Please contact the Editor for permission to reprint or reproduce any portion of this magazine.

we were able to put the HDS Purge Gas Project, the Utilities Modernization Project and the Light Ends Streamlining in operation and we successfully started making butane shipments. In other words, Lago employees have demonstrated that they have the skills, flexibility and determination to successfully meet many difficult challenges.

Q: We have talked about challenges and accomplishments. How about disappointments?

A: Injuries are things we all want to avoid, but unfortunately, two of our Mechanical people suffered serious injuries this year, both on and off the job. This points out the need for continued and increasing emphasis on safety so we can totally eliminate serious injuries. The very costly operating incidents at the Hydrogen and Sulphur Units, which stressed the need for making changes in a number of areas, also constituted a major disappointment. As this article is going to press, we have just had another operating incident, a fire at Pipestill no. 8. While it is still under investigation, our initial knowledge of the cause is that an open bleeder was the source of hydrocarbon fueling the fire. We just cannot afford to let

things like that happen. Additionally, we have had to make adjustments to a number of practices pertaining to product blending to ensure our position as a reliable supplier of quality products. These three areas, injuries, operating incidents and product quality control, were our major disappointments this year."

Q: Management has obviously stressed safety in operations during the first half of this year. The Company has held safety meetings, continued with safety audits, and is placing more emphasis on safety in many ways. Just recently, an off-the-job safety campaign was also initiated. Have those activities had any positive effects?

A: I believe it is too soon to draw any firm conclusions, but we have had some positive reactions from our people, indicating their sincere interest about the Company's safety concerns. I have a feeling that the emphasis in operating safety is starting to pay off, but our off-the-job safety performance continues to be a major problem. Do you know that we have had 37 off-the-job lost time accidents through the first half of this year compared to only two on the job? That's why we will continue to stress safety off the job as much as on the job.

Editor: Mrs. Myrna Jansen-Feliciano
Translation into Papiamento by: Mr. G. W. Bosse
Photographs by: Joe's Photographic Service
Printer: Verenigde Antilliaanse Drukkerijen N.V.

Q: The general impression that I get from talking to you and other persons in the organization is that as an organization we have not been doing that bad. As a matter of fact, except for a few unfortunate injuries and errors, we have done a pretty good job in operations so far this year. Does that give us some hope for the future?

A: The entire Lago organization has sufficient capabilities to accomplish many things. It has been demonstrated many times. We have a dedicated workforce that is clearly good enough to compete against any other in the world. I have to point out to you though, that we have to continue to strive for excellent performance, because with mediocre performance we don't stand a chance. We can do a lot to contribute towards a good future for Lago but it will mean continuous diligent work and close attention to details for all of us. We can do our share if we are determined and work effectively to protect our future. All the publicity about Lago shutting down is very disturbing to all of us, but we must try our best to put these uncertainties aside and concentrate our efforts on the major challenge at hand: making Lago more competitive. We all have a stake in it and every person in the refinery can make a contribution towards that goal.

Over 90 signs on ear protection were posted in the refinery to create more awareness of the need for such protection in certain high noise areas. The highly contrasting black on yellow signs clearly draw the necessary attention.

VIEW FROM THE TOP

Editor's Note: This irregular column called "View From The Top" will feature interviews with members of top management who will give us their views from up there where the perspective of things may sometimes be different than from our platform

Sr. Naugle:

EL RETO PRINCIPAL: HACI LAGO MAS COMPETIDOR

Momento nos "nos" cu que nos cu en ambien cona P.D. (menos empleado) y somos de R.E. Cada Operacion tiene su actividad en el 2 o 3 punto di e industria. No se veña "la otra" lado de la moneda. Mezclar una para hacer una cosa en calidad te da un "no". Nos esenciales reorganizacion positiva y eficiente a pronto i ntar de que no se impide en nos solucionar los problemas di crecimiento di cosas nos, no pa posibilitar. Antes di deciendo otra vez a monedas de la otra parte pa una mejor administracion. Nos esenciales encuadre sueldos pa todos cu estan dentro de la organizacion. Nos esenciales premios como lo que ya dimos en este momento de desarrollo en el ultimo año.

Al final de todo, el servicio es uno pa todos cu son en la organizacion. No se puede negar.

M. Hoy en dia somos grupo Alcoa o somos "Alcoa". Nosotros somos una organizacion local cu mundo. Nosotros somos una organizacion que cumplio su cometido de responsabilidad a la gente de Aruba. Como resultado un poco "creambus" tambien presento cambios e un poco cambiando un poco de estructura social para nos cu un poco mas competitivo. Nosotros somos una organizacion que cumple su cometido de responsabilidad a la gente de Aruba. Nosotros somos una organizacion que cumplio su cometido de responsabilidad a la gente de Aruba.

P- "No por prima de algun otro acompa cu ferencia a lata?"
 C- Si. Nos a encantaria tambie tu e nivellian di e organizacion pa tratar de asumir mas responsabilidad pa una operacionan y pa hacer ol siguiente mejoracionan tanto en

".... we have to continue to strive for excellent performance ..."

Sr. Robert Naugle, Operations Department Manager di Lago, ta cu nos desde January di 1983. Den e aña y mei ey, Sr. Naugle mester a dirigi un cantidad di transicion, cambio y reorganizacionan den loko por wordo calificá como Lago su periodo di operacion mas dificil. Den e siguiente entrevista, Sr. Naugle ta papia tocante e camionnan aki: lo logron, desilusionnan, accionnan di gerencia y reaccion di empleadon.

na por. Hasta cu mi cantidad humita di empleado y mi budget mas i limitato, nos te ke te cu andia tu loko mejoracionan cu por wordo hacis si nos baña e avendo di binter e organizacion pa definir e identifica nan. Pa vuula logia esaki, maqueria bosat, nos a un tres Mechanical Division den dos y cuatro Process Division den tres division. Tambe nos a combina e departamentoan di Mechanical y Process den un solo departamento di operacion, esta Operations Department. Tu esaki a wondo hacis pa asina forma un equipo mas efectivo. Awe, nos por bisa cu

esaki a resulta den mejoracion den trabajo di equipo y un millon habilidad pa cada cu traibaonan na un manera mas rapido y cu menos gasto. Husto cu e assistencia x cooperacion excelente cu nos a baña di e bendenan di e departamento tecnico, nos a forma un equipo di Process - Mechanical - Technical massta electivo.

P- Manera nos por nura, empleadon di Lago, especialmente esnan den bo departamento, a experiencia cambionan y reorganizacionan grande desde Januari. Hopi di non mester a traba "overtime", traba un trabajo diferente, traba cu problemanan cu ta diferente di esnan cu nan ta custodia y luma mas responsabilidad arriba nun mes no nan traibaonan. E situacionnan aki tin bisha por causa presion. Den bo opion, con empleadonan a reaccion arriba y situacionnan aki te au or?

C- E retoran cu Lago a enuenta e ana aki ta retoran cu cual poco bisha un organizacion mester trata den un periodo di tempo asina limita. Nos bendenan a hacer un trabajo sobresaliente den e manera cu nan a respondé na e retoran aki! Y no solamente ese, tamben a demonstra operacionnan mifor, manera e condidion mas largo di nos pipetil x "vacuum unit" nan ta mustia. E start-up exitoso di algun proyecto principal tambe ta un logio significante.

Den poco tempo tabata posible pa nos pone HDS Purge Gas Project, e Utilities Modernization Project y Light Ends Streamlining den operacion y nos a cuminzá haer embartiquenan di butano exitosamente. Den otio palabria, empleadon di Lago a demostrial cu nan tin e habilidad, flexibilidad y determinacion pa exitosamente culonta loko retoran dificil.

P- Nos a papia tocante retoran i logronnan. Qui hubo di desafortunada? C- Heridaan ta cosian cu nos tin kier evitá, pero desafortunadamente dos di nos bendenan di Mechanical a sali accidentean serio e aña aki, ambos na traibaon x (cont. arba pag. 6)

Need to control your weight?

GOOD DIET IS ESSENTIAL

Since 60% of Lago male employees, and 40% of Lago female employees are overweight, the topic of weight control should be of great interest to many readers.

Obesity is simply an excess of energy, stored in the body as fat. Fat accumulates whenever the intake of energy, usually measured in calories, exceeds the body's need. In Aruba many people maintain a diet that is very high in starch foods, such as bread and rice, which have a high energy content. These diets also tend to contain very few vegetables, which have a low energy content. Many workers at Lago add to this problem by eating an extra meal while working shifts, or overtime. Insurance company statistics show that overweight people do not live as long as slim people do. They have an increased incidence of heart disease, high blood pressure, diabetes, gall stones, and arthritis. The treatment of obesity is easy: decrease the intake and increase the expenditure of calories. Motivating people to do so is not easy.

The first step to losing weight is to make up your mind to control your weight, and to enlist the help of your friends and family. Cut out a picture of someone you want to look like, or don't want to look like, and put it on the door of your refrigerator. The next step is to become aware of your eating habits. Keep a diary, and write down what you eat, and when and where you eat.

A good diet is an essential part of your weight control program. The main job of the diet is to help you choose foods that will satisfy your appetite and meet the needs of your body, while limiting the caloric intake. There are no magical diets, and no foods that block or use up the calories from other foods.

Exercise is important, to tone up your muscles and cardiovascular system and to help to control your weight. However, it is much easier to eat fewer calories in the first place than to try to work them off later. You have to walk briskly for 20 minutes to burn off 2 pieces of white bread, and 60 minutes for that 1/2 cup of chocolate pudding that you couldn't resist!

And finally, set reasonable goals for yourself. Weight loss should be at a rate of 1 to 2 pounds per week. The standards printed in the accompanying table are reasonable final goals for most overweight people. Remember, the object of weight control is to feel, look, and live better.

* MAXIMUM ALLOWABLE WEIGHTS

If your weight exceeds the value opposite your height, you probably need to lose weight.

HEIGHT (feet - inches)	WEIGHT (pounds)
	Men Women
5-0	128
5-2	137
5-4	146
5-6	155
5-8	165
5-10	175
6-0	185
6-2	195

* This table is used by the Obesity International Center U.S. National Institute of Health - Conference on Obesity.

To improve communications, a new two-way radio system was put into operation in the Maintenance Operations and Mechanical Services Divisions in June. An important feature of this system is that, contrary to the pager system, it allows for two-way communications between the caller and the radio user. On photo: Billy Canegieter using the radio system in his office at the MOB.

Bo mester baha peso?

UN BON DIETA TA ESENCIAL

Ya cu 60% di empleadoron masculino di Lago, y 10% di estan (mucha ta pisa dimensio topico di control di peso mester ta di gran importancia pa hopi lo tot).

Obesidad (gordura): ta simplemente un exceso di energia, wardia de carne e corpsa den forma di vete. Vete normalia ki ora cu e consumo di energia, normalmente midi den caloría, ta surpasá e corpsa su necesidad. Na Aruba hopi hende cu mantene un dieta cu ta hopi (no na almidon = zetmeil), manera pan y arroz, cualquier tien un exceso nido halto di energia. E tipo de dietanan aki hopi bishá ta contiene masha poco berdina, cual no contiene poco energia. Hopi (almidon) na Lago ta agrega na e problema aki, doce di come un cuantidad extra hora di trahia warda, ova e carne."

Esencialeanan di compamanan di sanguineo se mista cu hendenan sonda gorda la bula mes largo quedando bende delgá. Nan tien un problema mas grande di enfermedad esclerosis, presion halto di sangre, diabetes, piedranan di lomos, ojuelos y artrosis.

E cuantidad di obesidad ta facil: consumir mas y aumentar e gaster mas que el boro. Motivando boro pa boro esey no ta facil.

E proximo paso pa baha peso ta pa dicidu na aplicá bo mes na controlá bo peso, y pa inclui e ayudo di bo amigonan y bo familia. Pega un portret di un bende cu bo kier o no kier parse, arriba e porta di bo ligidaire. E siguiente paso ta pa bo ta consciente di local bo ta costumbra di come Tene un diaño, y scibbi aden kiko bo ta come, y ki ora y na unda ho ta come.

Un dieta ta esencial pa bo programa di controlá peso. E trahao principal di un dieta ta pa yudaho seude e cumindanana cu lo satisface bo apetito y cu ta cumpli cu e necesidadan di bo corpsa, mientas cu e ta limitá e consumo di caloría. No tin dieta magico, y ningun cuminda no ta blokia ol uza e calorianan di otro cumindan. Enerciso ta importante, pa vigorizá bo musculonan y e sistema cardiovascular y pa yuda na controlá bo peso. Sinembargo, ta mas facil pa come menos caloría na prome lugar en vez di purba deshaci di nan despues. Bo mestea cana liber pa 20 minuut pa deshaci di 2 pida di pan blanco, y 60 minuut pa mita cup di pudding di chocolati cu bo no por a resisti!

Y finalmente, pone metanan razonable pa ho mes. Perdida di peso mester hai na un razon di 1 pa 2 libei pa siman. E normanan den e tabla acompañante ta metanan final razonable pa mayoria di hendenan cu ta pisa dimensio. Corda, e objetivo di control di peso ta pa sinti, mustra, y bila mihor.

* PESONAN MAXIMO PERMISIBLE

Si bo peso ta surpasá e ciha opuesto di bo haltura, probablemente bo tin di baha peso.

	Hombre	Mujer	PESO (pia - inch)
5-0	128
5-2	149	137
5-4	158	146
5-6	167	155
5-8	178	165

E reto principal . . .

(cont. di pag. 4)

palor di trabao. Esaki ta mustia e necesidad pa aumenta y continuá cu e enfasis arriba seguridad pa asina nos por elimina accidentenan serio totalmente. E incidentenan operativo masha costoso na e unidadnan di hidrogeno y azulre, loke a acentua e necesidad pa haci cambionan den un cantidad di area, tambe a constitui un mayor desilusión. Na momento cu e articulo aki bai imprenta, nos a cabá di experiencia si un otto incidente operativo, un candela na Pipestill no. 8. Mientas cu te aínda e tabao di investigación, nos conocimiento inicial di e causa ta cu un "bleeder" habri tabata e liente di hidrocarburo cu tabata duna combustible na e candela. Nos no por permiti nos mes pa laga cosnan asina pasa. Adicionalmente, nos mester a alustá un cantidad di practicanan perteneciente na mezcla de producionan pa siguitá nos posicion como un suministrador confiable di producionan di calidad. E tres arecanan aki, heridan, incidentenan operativo y control arriba e calidad di producionan, tabata nos desilusionnan principal e aña aki."

P.: Gerencia evidentemente a acentuá seguridad den operacionnan durante e primer mitar di e aña aki. Compania a tene reunionnan di seguridad, a sigi cu bishtanan di seguridad, y ta poniendo mas enfasis arriba seguridad den hopi manera. Recientemente, un campana pa seguridad pafrir di trabao tambe a wordo incid. E actividadnan aki tabata tin algun efecto positivo?

Mr. Naugle and his wife Avalyn play tennis on the island's tennis courts where they have met many Aruban families. "One thing I noticed about Arubans," said Mr. Naugle, "is that they have a high sense of moral integrity. And, of course, they are very friendly." Besides tennis, snowskiing and jogging, Mr. Naugle also enjoys his grandchildren. Laughingly he said, "The good thing about grandchildren is that you can spoil them without having to suffer the consequences"

C.: Mi ta kere cu ta mucho temparan pa vega na conclusionnan firme, pero nos a haña algun reaccion positivo di nos hendenan, indicando nan interes sincero pa cu e preocupacionnan cu Compania pa loke ta trata seguridad. Mi tin un sentimiento cu e enfasis arriba seguridad den operacion ta cuminna duna resultado, pero e aplicacion di seguridad palor di trabao te aínda ta un problema grande. Bo sa cu nos tabata tin 37 accidente cu perdida di tempo

palor di trabao durante e prometian di e aña aki compará cu solamente dos na trabao.² Ta pesey nos lo sigi enfatizá seguidad tanto na trabao como palor di trabao.

P.: E impresion general en mi ta habla papando cubo y cu otro personan den e organizacion ta, cu como organizacion nos no a faci avina un mal trabao. E hecho ta cu realmente, cu excepcion di algun accidente y erronea desafortunado, nos a faci un trabao hasta bon den operacionnan te aior e aña aki. Esaki ta duna nos algun speranza pa futuro?

C.: Henter e organizacion di Lago tin suficiente capacidad pa logra hopi los. Esaki a wordo demostrial hopi bieha. Nos tin un lotza obierel dedicá cu ta claramente suli ientemente bon pa competi contra cualquier otro na mundo. Mi tin di señala sinembargo cu nómester sigi haci tu loke ta posible pa un funcionamiento excelente, pasobia cu un fun iomamiento mediocre lo no tin posibilidad pa sobrevivencia. Nos pa faci leop pa contubui na un bon intento pa Lago, pero esaki lo significa dedicacion continuo na trabao y atencion intensa pa detencion de nos tur. Nos pa faci nos partis nos ta detencion y seños traba chincuentemente pa proteba nos futuro. Tu e publicidad torante ceramento di Lago la masha impresante pa nos tur, pero nos mester haci tu esfuerzo pa pone e insigridadnan aki un bandia y concientia nos esuerzonan arriba e reto principal actual haci Lago mas competitidor. Nos tin un ni interes den esaki y cada persona dehi e refinaria por faci un contribucion pa logria e meta ev

EXXON NEWS

NEW CONTRACTS FOR CERREJON COAL

Two new contracts have been obtained for Cerrejon Coal, one by Exxon Coal International, a Division of EIA, and one by CARBOCOL,陶的 50-percent Colombian partner.

Exxon Coal International/ INTERCOR

Exxon Coal International, on behalf of INTERCOR, has obtained a contract with the Finnish Sugar Company, Lohisaari, for Cerrejon coal over a three-year period. Beginning in the second half of 1985, a maximum of 200,000 tonnes of high-quality steam coal of low sulfur and ash content will be supplied to Lohisaari.

The contract was negotiated by Finnugra, the Finnsugar Finncoal, a purchased company owned by 17 Finnish power companies and industrial units, among them Lohisaari. Upon signing the Finnugra contract, Finncoal requested an order of an additional quantity of coal for its other associates.

CARBOCOL

CARBOCOL has signed on the Electric Fuels Corporation, an affiliate of the Florida Power Corporation, for annual deliveries of about 500,000 tonnes of Cerrejon coal. The contract is for a 54-month period, beginning in January of 1985.

Previously Signed Contracts

By INTERCOR (Exxon affiliate)

- ELSAM - Denmark
- ESB - Ireland

By CARBOCOL Colombian Government coal company

- CARBOEN - Spain

Cerrejon Projects Progress

As of the end of May, Cerrejon Coal Project construction was 53 percent complete, as follows:

- The mine: 42 percent complete
- The port: 56 percent complete
- The railroad: 74 percent complete

Above article was reprinted from the "Ahora".

CONTRATO NOBO PA CARBON DI CERREJON

Dos contrato nobo a woldo obtien pa carbon di Cerrejon: un doce di Exxon Coal International, un division di EIA, y un doce di CARBOCOL, e compaia Colombiana den chal Exxon fin 50 por ciento de interes.

Exxon Coal International - INTERCOR

Exxon Coal International, na nomber di INTERCOR, a obtiene un contrato cu Finnish Sugar Company, Finnsugar, pa suminis-

tracion di carbon durante un periodo di tre año. Cumizando den e segundo mitad di 1985, un maximo di 200,000 ton di carbon di calidad halto cu ta contiene poco azule y shinshi lo woldo suministra na Finnsugar.

E contrato a woldo negocia doce di Finnsugar y Finncoal. Finncoal ta e compaia comprador cu ta propiedad di 17 compaia di electricidad y empresasan industrial na Finlandia, entre nan Finnsugar. Despues di e firmamento di e contrato cu Finnsugar, Finncoal a haci un peticion pa un olerta pa un cantidad di carbon adicional pa su otio sociacion.

CARBOCOL

CARBOCOL a firma un contrato cu Electric Fuels Corporation, un afiliado di Florida Power Corporation, pa un suministro anual di 500,000 ton di carbon Cerrejon. E contrato ta pa un periodo di 54 luna, cuminzando na Januari di 1985.

Contrato Anterior firma

Door di INTERCOR (afiliado di Exxon)

- ELSAM - Dinamarca

- ESB - Irlanda

Door di CARBOCOL (compaia di carbon di gobieno Colombiano)

- CARBOEN - Spagna.

Proceso den Proyectoran di Cerrejon

Desde fin di Mei, e construccion di e Cerrejon Coal Project tabata 53 porciento clá, mancia ta sigi:

- E mina: 42 porciento completa
- E port: 56 porciento completa
- E ferrocarril: 74 porciento completa

E articulo aki a sei reproduci fin di "Ahora".

To maintain a healthy mind and body many Lago employees indulge in sports activities they organize after working hours. The months of June and July were full of interdepartmental softball and volleyball tournament

activities, where friendship and laughter were the rules of the game The Security Selection volleyball team resulted as the champion and the HDS team as the sub-champion of the volleyball tournament.

"Lago - 60 years in Aruba"

1924 - 1984

The ARUBA ESSO NEWS is published for all Lago employees. Please contact the Editor for permission to reprint or reproduce any portion of this magazine.

VOLUME 46 - NO. 8

President Cavallaro: excellent work performed through these years . . .

Sixty years ago, when Aruba was still an island of few resources and employment, our Company began to operate as a transhipping terminal, first in the Oranjestad harbour and later in the San Nicolas port. Soon after that, the Lago Oil & Transport Company was officially established as a Corporation in Ottawa, Canada on August 12, 1924 -- started its journey into the world of oil business by refining its first few barrels of Venezuelan crude in 1929. That marked the beginning of a period of growth, a history of achievement, a lifetime of development for Lago and Aruba. We are all familiar with the development of Lago over the last 60 years. Lago became one of the largest, safest, and most modern refineries in the world. Several million dollars were spent expanding the refinery, modernizing its facilities and training its personnel. Our Company has played a key role in the development of the island and its community and has become one of the major pillars of the Aruban economy.

In the last few years, Lago has continued to invest large sums of money to modernize its facilities and maintain its competitive position. Since 1979, over 125 million dollars capital investment have been made to improve product yields, reduce fuel consumption, improve safety and reliability. The Refinery spent 30 million dollars alone to install two new computer-controlled high efficiency boilers that replace six old units. A 15 million dollar project has recently been completed to recover butane from the refinery gas system and upgrade this to LPG for export. In addition, expenditures of 270 million dollars have been incurred in the last few years to upgrade maintenance standards, equipment reliability, and housekeeping.

Lago has always responded very rapidly to the changing business environment, relying on competent, skillfull and loyal employees - 95% of whom are Antilleans. This ability to handle changes has recently been put to the test, prompted by the cutback in crude supplies from 300 to 180 KBD and the increase in crude pricing which occurred last December.

Lago has reacted very effectively to this new difficult situation, by streamlining its operations and adjusting its organization accordingly. The workforce has been reduced by 30% in an orderly manner. With the cooperation from all our employees and Union representatives, we have been able to implement significant changes in a very short period of time without impairing safety and reliability. We now have a leaner, more efficient organization. By minimizing our costs and improving our competitiveness, we are in a better position to face the challenges ahead.

Regarding our future, I can reassure you that we are sparing no efforts to seek a satisfactory

President Antonio Cavallaro

long term supply arrangement with our crude suppliers to ensure the viability of our operation and to continue to contribute to the prosperity of our employees and the Aruban community. I would like to take the opportunity of Lago's 60th anniversary celebration to extend to all its present and past employees our most sincere gratitude for the excellent work performed through these years and a most cordial wish for many more years of mutual commitment.

Presidente Cavallaro: excelente trabao haci durante añanan . . .

Sesenta año pasa, tempo en Aruba tabata ainda un isla cu poco recurso y empleo, nos Compama a comenza operá como un terminal di transbordacion, promé den hal di Oranjestad -- despues den e hal di San Nicolas. Poco tempo despues di ese, Lago Oil & Transport Company -- oficialmente estableci como un corporacion na Ottawa, Canada, dia 12 di Agustus 1924 -- a comenza su viaje den e mundo di

negocio di azeta doot di refina su promé poco barilhan di crudo Venezolano na 1929. Esca a matra e comienzo de un periodo di crecimiento, un historia di logro un curso di bida di desarollo pa Lago y Aruba. Nos tra ta na laftina di e desarollo di Lago durante e ultimo 60 añanan. Lago a bira mi de e refinerianan di mas grande, mas sigo y mas moderno di mundo. Varios million dollar a wordo

gasta na expande e refineria, nosi unha e facilidadnan, y entrena su personal. Compania a funga un papel clave den e desarrollo de e isla y e comunidad y a Isla un di e pilantran principal di e economía Arubano. Deja e ultimo añanan aki, Lago a segui inverti sumanana grandi di placa pa modernizar su facilidadnan y mantener su posición competitiva. Desde 1979, mas cu 125 million dollar na capital a wordo inverti pa mejorá e rendimiento di producto, reduci consumo di combustible, mejorá seguridad y confiabilidad. E refineria a gasta 30 million dollar so pa instala dos buelos nobo di rendimiento halto y controlá pa computador, pa reemplazar e seis maquinaria viejas. Un projecto di 15 million dollar a bin clausurado pa recibirá butano fio di e sistema di gas de refineria, pa a wordo mejorá y converti den LPG pa exportación. Fuerza di ese gastaron montando na 270 million dollar a wordo hici den e ultimo añanan aki pa mejorá norma maru di mantenimiento.

confiabilidad di equipo, y mancho doméstico. Lago sempre a respondé hopi lilieta na e cambionan den e ambiente comercial, dependiendo arriba un forza obien el competente, habil y leal, di cual 95% ta Antillano. Recientemente abilidad di trata cu cambionan, a wordo someti na un prueba, causá doer di e reducción den e suministro di crudo di 300 pa 180 mil bariel pa dia y e aumento den e preci di crudo na Decembre ultimo. Lago a reaccioná hopi electivo arriba e situación nobo y dificil aki, haciendo su operacionnan fácil y suave, y ahustando e organizacion conforme e situación. Nos forza obrien a wordo reduci cu 30% na un manera udena. Cu e cooperacion di tu nos empleado y representantean di sindicato, gerencia por a implementá cambionan hopi significativo den un periodo hopi cortico sin perjudica seguridad y confiabilidad. Nos tin awor un structura di organizacion cu ta menos denso y mas eficiente. Reduciendo nos gastaron y

mehorando nos base pa competencia, nos ta den un mejor posicionamiento pa enfrentar e retoran actual.

Tocante nos futuro, mi kier reasignar a hoso tui cu nos no ta vasila pa haci tu esfuerzo pa trata na logra un arreglo satisfactorio pa un suministro arriba un termino largu cu e suministradoran di crudo pa seguirá y viabilidad di nos operacion y continua cu nos contribucion na e prosperidad di nos empleadonan y e comunidad Arubano.

Mi kier tume a oportunidad di Lago su celebracion di 60 año pa extende na tui e empleadonan actual y di pasado, nos mas sincero gratitud pa e trabajo excelente cu a ser haci durante e añanan aki y un deseo masha cordial pa hopi mas año di compromiso mutuo

SIXTY YEARS — a lifetime

Those sixty years were not always prosperous years. Just as in any person's life the Company had its ups and downs, its moments of glory and times of uncertainty. But sixty years by itself is an accomplishment. For any company to have existed for 60 years, many things must have been functioning right.

One of those factors, and also the greatest asset a company can have, is its work force. Lago employees were always known to be hardworking, dedicated and loyal, able to meet challenges as they came along. And that is part, aside from sound management, of what contributed to Lago's 60-year history achievements. Besides a steady take-home pay, what intangible values do employees attribute to their employer? For some employees, Lago may be just a place to work to earn a living. For many others, however, Lago means a little more than that, a place to grow professionally, an opportunity to

meet challenges, a chance to prove one's capabilities Some employees, with different backgrounds, education, and years of service, were asked to give their personal views on what they value most in their jobs. Here are the answers:

• **On August 12, 1984**, the same date that Lago completed its 60th anniversary, Hubert Dirks, better known as "Molli", commemorated his 10th year of service. Molli is at present an Advance I Instrumentman in the Instruments/Electrical Section of the Operations Department. An avid sports player, he organizes many sports activities for his section. "You need recreation," he says, "especially if you work hard. The tournaments we organize for Lago employees creates a good atmosphere between the employees." How about work? "Lago is a competitive company, so you have to demonstrate that you can do the job. In our section there is a lot of competition; everybody has to keep up to date

A PLACE TO GROW

"Any ambitions? "To reach as far as I can ...," said Moffi, an Advance I Instrumentman in the Instruments/Electrical Section of the Operations Department.

with the new technology and that is very demanding. I think my job is challenging, because often I have to repair new equipment without getting specific training for it; and, when problems arise, I have to troubleshoot until I can solve the problems....." Any ambitions? "To reach as far as I can," said Molfi, "although, a lot depends on the opportunities that will come my way....."

• A graduated marine engineer

engineer, Randolph Peterson, had worked as such for 7-1/2 years for Shell, ashore and on board of ships. For the last 6-1/2 years he held a job as Coordinator Ship Manager and Purchasing Manager for the Dok Maatschappij in Curacao. With those 14 years of experience behind him, he was employed by Lago as Group Head of the Storehouse Materials Operation in October of '83. "I personally believe it was advantageous for me to have started my career at Lago in this section, and, at that time, because I was able to use my experience to introduce and implement many changes," commented Randolph. He explained: "Due to the 38% manpower reduction in our section, reorganization had to take place, things had to be changed, corrected, and employees had to be trained to take each other's jobs.

And all that had to be accomplished while we were working towards a more acceptable level of service."

In the short time he has been with the Company, what are Randolph's experiences so far? "One of the things I appreciate is that I had the opportunity to attend good training programs here," he said, "such as the Compensation, Transition, and First Line Supervisory workshops. Another type of training that I consider to be very important, and wish to promote for our section, is on-the-job training. Teaching people why certain things should be done creates in them more interest for their work, which in turn encourages them to produce more in quality and quantity."

"Furthermore, from my own experience, I can say that those in a higher position than you value your input. I have personally not yet experienced that my boss asks me a question and then just files the answer. I feel that my opinion is valued and to me that is how your superior expresses that he

values your expertise, because that is how I deal with my subordinates also."

Having worked at two other large companies prior to joining Lago, in what aspect does Lago stand out the most to Randolph? "The fact that Lago is a production oriented organization," he said. "In many other organizations" he explained, "two persons employed in the same position on the same date have to start with and continue with the same salary for as long as they perform the same work. I don't believe in that system. Here, at Lago, your opportunities for advancement and your growth in income are determined by your performance. And I think that is the best system. Some people say that money is a motivator, but I don't believe it is....."

• In 1947, Anselmo Semeleer

enrolled in the Lago Vocational School as an apprentice. As he was reminiscing about those days, he indicated that attending that school was one of the most significant events in all his years of employment with Lago. "It is through the Lago Vocational School that I became a first class carpenter," he said. One of the pleasant experiences that stands out the most in his 37 years with Lago were his 16 years as master of "driving piles." "I am the only person still at Lago who has witnessed how piles were driven into the sea bottom when Reebirth I was built," commented Anselmo. "In that job, I have worked together with geologists, performing dredging work, checking sea movements, and pile driving. It was hard work."

In the 1970's, however, Lago sold the pile driver, and Anselmo then moved to the Process - Fuels Division. On January 1st of this year, he became a permanent operator.

Anselmo is an active member of the Independent Oil Workers Union of Aruba having served as board member, shop steward, and Union President from 1978 to 1982.

• I want to broaden my horizon, learn more, teach others what I've learned, and subsequently establish a more productive workplace," said Barbara Lee, a Systems Analyst in the Mathematics, Computers and Systems Division of the

Administrative Department. Barbara, who has had some prior experience in computer applications in the United States, joined Lago in October of 1982. At the start of her career here, she was assigned to maintain the personnel system. After a while, she became the main Systems Analyst of the Hewlett Packard 3000 computer system.

"The Hewlett Packard project was a big challenge for me," said Barbara, "because it meant learning a totally new computer system and application. In addition, the HP is a real-time on-line system. This means that any processed transaction will take

.. Lago has stimulated my professional growth," said Barbara Lee, Systems Analyst in the Administrative Department

place immediately. Management is looking into more on-line systems for Lago. One of my future challenges is also to be involved with the implementation of those systems."

Another detail that Barbara values in her job at Lago is the fact that she has had the opportunity to attend many courses here and abroad. "This has enhanced the development of my career and has created efficiencies in my work," she commented. "I can certainly say that Lago has stimulated my professional growth."

• C. Victor Hunt, at present a Contact Engineer in the

Operations Support Division, has been at Lago for five years after graduating with a Masters degree in Chemical engineering from the University of Twente in Holland. At Lago he has also worked in Process Design and Business Planning & Coordination. Fresh

out of University what were the greatest challenges? The biggest challenge I had when I started with Lago, he said, was to develop my interpersonal communications skills versus technical skills because I have found that using those interpersonal organizational skills are necessary in order to be able to function in any organization. As a matter of fact, I believe that getting things done in a big organization such as Lago, where you have different forces acting in different directions, is the most valuable skill a professional can have here."

How about challenges in the technical field? Vic feels that the complexity of the refinery itself is a challenge. "When you work in a refinery where everything has to be done in harmony because all the units are interconnected," he said, "you have to gain knowledge

"The biggest challenge I had when I started with Lago ... was to develop my interpersonal communications skills, ..." said Vic Hunl, Contact Engineer in the Operations Support Division of the Technical Department.

about all the units and that requires your technical knowledge." The fact that Lago is a 60-year old refinery with some old equipment is not discouraging to Vic. "On the contrary," he said, "it is a challenge to do a good job so you can keep it going for another 60 years. And besides, because Lago is old, there are a lot of highly experienced people around. Working with them is valuable for the development of a new engineer."

In conclusion, Vic said that every day of work is a challenge for him. "You just have to keep on perfecting yourself," he said, "and if things aren't going too well, it's a big challenge to try to make 'em better."

pasobia mi tabata por a nza mi

experiencia pa introduci y implementá hopi cambionsan," Randolph a comenta. Ela splica: "Pa motibo cu e personal den nos sección a wordo reduci cu 38%, reorganizacion mester a tuma lugar, cosnan mester a wordo cambiá, corehi, y empleadon mester a wordo entrená pa tuma trabaonan di otro. Y tur ese a wordo lográ mientras cu nos tabata traha pa yega na un nivel di servicio mas acceptable." Den e corto tempo cu e tin cu e

"I feel that my opinion is valued...." said Randolph Peterson, Group Head of the Storehouse Materials Operation, Administrative Department.

Compania, kiko Randolph su experiancian ta te awor? "Un di e cosnan cu mi ta aprecia ta cu mi tabata tin e oportunidad pa asistí na bon programasan di entrenamiento akinán," ela bisa, "manera e "workshop" nan di Compensation, Transition y First Line Supervisor. Un otro tipo di entrenamiento cu ami ta considerá di ta hopi importante, y cu mi kier promove po nos sección, ta entrenamiento na trabaó. Siñando hendenan pakiko cierto cosnan mester wordo haci, ta crea den nan mas interés pa man trabaó, loke na su turno ta encurashá nan pa producir mas den calidad y cantidad."

"Mas ainda, di propio experiencia, mi por bisa cu esnan den un posicion mas halto cubo ta aprecia bo punto di bista. Ami personalmente no a experiencia ainda cu mi hele ta puntrimi algo y simplemente no ta haci caso di mi contesta. Mi ta sinti cu mi opinión ta valioso y pa mi ese va e manera cu ho hele ta expresá cu e ta valora ho habilidadnan,

pasobra ta asina ami ta trata cu esnan cu ta traha bao di mi tambe." Despues di a traha anteriormente pa dos otro compañianan grandi, promé cu elá drenta servicio di Lago, den ki aspecto Lago ta resalta mas po Randolph? "E hecho cu Lago ta un organizacion orientá ariba producion," ela bisa. "Den hopi otro organizacion," ela splica, "dos hende cu wordo empleá den e mesun posicion ariba e mesun lecha mester cuminzá y sigi cu e mesun salario tanten cu nan haci e mesun trabao. Ami no ta kere den e sistema ey. Aki na Lago, bo oportunidadnan pa avanzá y e aumento den bo salaria tu wordo determiná a base di e trabao cu bo ta checutá. Y ami ta pensa cu ese yta e mejor sistema. Algun hende ta bisa cu placa ta un desmotivador, pero ami no ta kere cu e ta"

• **Na 1947, Anselmo Semeleer** a inscribi na Lago Vocational School como un "apprentice". Recordando e dianan ey, ela indicá cu siguiendo cursonan na e skol ey tabata un di e evéntonan mas significativo den tur su añanan di empleo cu Lago. "Ta e Lago Vocational School a haci cu mi a bira un carpinté di primera clase," ela bisa.

Un di e experiancianan placentero cu ta resalta mas den su 16 añanan cu Lago tabata su 16 añanan como "master of driving piles". "Ami ta e único persona te aínda na Lago cu a presencia con e stícanan tabata wordo clabá den e fondo di laman ora cu Reelbeth I a wordo construí," Anselmo a comenta. "Den e tiabao ey mi a traha hundo cu geólogonan, echerutando trabaonan di di agamento, averiguando movimiento di laman, y claba

On August 23, Mr. P. J. Holland paid a visit to the Royal Dutch Shell Refinery and his staff. Dave Flemming, manager of the refinery, gave an overall view of the refinery's operations during the royal visit. In 1955 and 1956, His Royal Highness Prince Bernhard of the Netherlands made two visits to Aruba.

stata. E tabata un trabajo duro Den e añanuu 1970, sinembargo Lago a bende en "pale driver", esta e machin pa' lila staa y Anselmo a translada pa Process Fuels Division. Dia promé di Janmar di e año aki, ela bira un operador permanente. Anselmo ta un miembro activo di Independent Oil Workers Union di Aruba y a ocupá e puesto de miembro di directiva, shop steward, y presidente di 1978 pa 1982.

• "Mi kier amplia mi horizonte, siña mas, instui otionar loke ami a siña, y subsequentemente crea un lugar di trabajo mas productivo." Barbara Lee, un Systems Analyst den e Mathematics, Computers and Systems Division di Administrativa Department, a bise. Barbera kide tabata un algun tiempo na anterior den aplicaciónsnan di computador na Esso di Estados Unidos, a drenta den sienis odi Lago en Octubre di 1979. Na principio di su carrera den esas dia vendido una garra en el momento di e sistema di personal. Algun tiempu di spues, dia dia Lee, Systems Analyst principal di e sistema di computador Hewlett Packard 1000.

E pronto di Hewlett Packard tabata un reto grandi pamí. Barbera a bise, "pasobia" e tabata creando un nio mestre a siña un aplicación y sistema de computador totalmente nubo. Ademas, e HP ta un "real-time on-line system". Esaki kiermen cu ealgunes transaccion cu wordo procesar lo tunna lugar inmediatamente. Gerencia ta studiando la posibilidad pa Lago trilla mischik "on-line system" nako. Un di mi rétonan pa futuro, ta pa ta envolvi també cu e implementacion di e sistemanan.

Un otro detave cu Barbera ta apresa den su trabajo na Lago ta e heilo cu e tabata un r oportunidad pa asisti na hopi un so akmán y den extexto. Esaki a yuda contribui na e desatovo di mi carera y a crea eficiencieman den mi trabajo," ela comenta. "Mi poi bisa segúrnamente cu Lago a stimula mi crecimiento profesional."

• C. Victor Hunt, actualmente un Contact Engineer den Operations Support Division, tin 5 año ta traiba na Lago despues di a gradua cu un grado di "Master"

den ingenieria química den e Universidad di Twente na Holanda. Na Lago ela traiba tambe den Process Design y Business Planning & Coordination. Como graduado recién, kiko tabata Vic su rétonan mas grandi? "E reto mas grandi pamí ora mi a cuminzá na Lago," ela bise. "tabata yo desatovo mi abilidad pa comunicación interpersonal, contra mi abilidad tecnico intelectual, pasobia mi a descubri cu e uso di e abilidadnan interpersonal organizacional ta necesario pa' mi funcionar den cualquier organización. En realidad, mi ta kere cu pa logra realizacion di e trabajo den un organization grandi manera Lago, unida cu bo tin lóizanan distinto actuando den diferente direccioñ, ta e abilidad di mas valioso cu un profesional poi tin akmán." Kiko ta e rétonan aruba tereno

memoró Vic ta sinti cu e complejidad di e refineria más ta un reto. "Ota cu bo traiba den un refineria unda tur cos mestre wordo haci den harmonia (pasobia tu e unidadnan ta interconecta)," ela bise. "bo tin di hafia mas conocimiento técnico." E hecho cu Lago ta un refineria di 60 año biecu cu algun equipo biecu, no ta descurashá Vic. "Al contrario," ela bise, "ta un reto pa hacer un bon trabajo pa asina ho poi tené den operacion pa un otio 60 año mas. Y ademas, pasobia cu Lago ta biecu, un un cantidad di gente sumamente experiencia akmán. Trabajando cu nan ta valioso pa e desaroyo di un ingeniero nobo." Concluyendo, Vic a bise cu cada dia di nabaao ta un reto pe. Bo mestre continua cu perdecioná bo mes," ela bise. "y si cosinan no ta bavendo mucho bon, ta un reto grandi pa puha di mejorá nan."

6.5 Billion Barrels of Oil

Up to August 12, 1984, Lago Oil & Transport Company, Ltd. has processed:

6.5 BILLION BARRELS OF PETROLEUM.

How much, really, is 6.5 billion barrels of oil?

Here are different ways of looking at it:

- 6.5 BB of oil cover the entire island of Aruba, with stacks placed side by side 11 barrels high
- 6.5 BB of oil cover the island in its totality 1,800 times
- 6.5 BB of oil cover the complete surface of the island with an oil cap of 5-1/2 meters high
- 6.5 BB of oil would satisfy the energy demand of the entire population of the United States for one year (according to 1981 U.S. consumption statistics).

Impressive? You bet!
Congratulations for your contribution to these barrels.

Credit: ©Papar Acción Technological USD, Inc., Aruba, Inc., Inc.

6.5 Billion Baril di Azeta

Te cu dia 12 di Augustus 1984, Lago Oil & Transport Company, Ltd. a procesá:

6.5 BILLION BARIL DI PETROLEO.

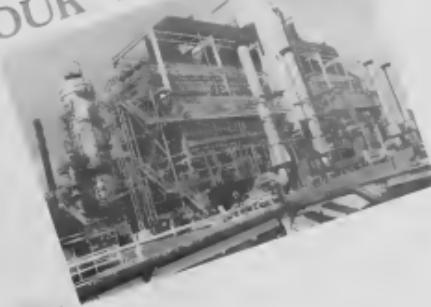

Cuanto 6.5 billion baril di azeta ta realmente?

Aki tin diferente manera di miré:

- 6.5 billion baril di azeta ta cubri henter e isla di Aruba, cu barilnan poní den filanen banda di otro cu un altura di 11 baril arriba otro
- 6.5 billion baril di azeta ta cubri e isla den su totalidad 1800 biha
- 6.5 billion baril di azeta ta cubri henter e superficie di e isla cu un capa di azeta de 5-1/2 meter di altura
- 6.5 billion baril di azeta lo satificá e demanda pa energia di henter e población di Estados Unidos pa un año(según e consumo di E.U. na 1981).

Impresionante? Sigur cu si!
Pabien pa bo contribucion na e barilnan aki.

Lord Boxoe dedicates song to Lago

"GOD BLESS LAGO" is the title of the calypso that Lord Boxoe, Ammatant, Yead Ilhidge, better known as Lord Boxoe, recorded on a 45 rpm record on the occasion of Lago's 60th anniversary.

"That calypso is based on my personal feelings toward Lago," said Lord Boxoe. "Lago meant everything to me. I started to work here as a kid, when I was only 14 years old, and I worked here practically all my life. Everything I know I got from Lago." That song was also written as a tribute to every Lago employee who has contributed to Lago's existence for sixty years.

Lord Boxoe presented his record "GOD BLESS LAGO" to Lago's President, Antonio Cavallaro, on the occasion of Lago's 60th anniversary.

Lord Boxoe, who went on pension on January 1 of this year after 38 years of service, last year became Road March King with the famous "GeGe." In the 20 years that he has participated in the carnival contests, he has won a total of 16 titles, either as Road March King or Calypso King. Some of his best carnival compositions such as "Ge-Ge" and "Meaty" were recorded on the other side of the record. Music accompaniment was provided by Triple "S" with three Lago employees as band members: Sonny Hoo, Manager and saxophone player; Casim Giel, pianist; and Larry Hoo, trombone player.

reminisces about the past

Still an energetic and active member of the community, Freddy Dirksz is the only Lago annuitant alive today who started working in 1924, at the beginning of Lago's now 60-year history.

"The other two boys, Manuel German and Gabriel Werleman, who started together with me," related Freddy, "had as their job to row boats for Messrs. Wolfson and Gray who, as part of a survey, came to Aruba to measure the depth of the ocean by the San Nicolas harbor. At 14 years of age, I was what they called a 'waterboy'. I would go around serving water for the oil representatives to drink," said Freddy.

Eventhough that was 60 years ago, Freddy seems to remember many things: names of people, which ships anchored first at Lago and where everything was located. He also remembered exactly how much he earned. "I was the person with the lowest salary at that time,

FREDDY DIRKSZ

Freddy Dirksz... the only annuitant alive, who has eyewitnessed the very beginning of Lago's 60-year history, recalls some pleasant memories of the times ...

NAFLs. 0.25 per day. That came out to NAFLs. 1.50 per week, because we had a six-day work week," said Freddy with a smile. As he continued, "some others were paid NAFLs 1.00 per day. Johan Eman would come on pay day to pay us in florins." Was NAFLs. 1.50 per week enough? "Sure," he said.

What about transportation in those days? "In the early beginnings, some people walked to work. Others used donkeys as their

papiando di pasado

Aunke un miembro energico y activo de la comunidad, Freddy Dirksz ta e unico pensionista di Lago na bida ave, cu a comenza trabaja na 1924, na primipio di Lago su 60 año di historia. "E otio dosmin ha bomenen Manuel Gouman y Gabriel Werleman, kendenan come parte di un estudio topografico, a bini Andra pa midh y prohidad di Lago, boni banda di chal di San Nicolas Ami, na edad di 14 año tabata loke nan tabata vama un "waterboy". Mi tabata atendido representanteen petrolio surbiendo nan awa pa nan biebi Freddy a bisa.

Aunke ta mas cu 60 año pasa, Freddy ta parise di ta corda hopi cos Nombes di kendenan, cu alian han ornan a anika prome na Lago, unda tui eos tabata situa. La ta corda tambi exactamente cu tanto e tabata gana. "Ani tabata e persona cu el salario mas abijo e tempo ev, ganando NAFLs. 0.25 pa dia. Esaki tabata monta na NAFLs. 1.50 pa siman, pasobis no tabata traiba sei dia pa siman." Freddy a bisa cu un sonrisa, mientras e tabata sigi conta, "algun otro tabata wordo pagá NAFLs. 1.00 pa dia. Johan Eman tabata bin ariba dia di pago pa pagá nos na florin "NAFLs. 1.50 pa siman tabata basta?" "Sigui cu si," ela contesta. Con tabata pará cu transportacion den e temporan ev? "Na primipio algun hende tabata cana bin traabajo. Otorgan tabata una banico como nan medio di transportacion. Nan tabata mara nán buncoran ba un matí kiwi patos di e porton, ora nan vega ariba dhalma mamita, preparan cu especier.

Our Compani is known to have the best and most loyal employees. Not surprising at all of course, thinkfolk have been 25 years in San Nicolas and 129 of those have been in service to Standard. Some annuitants 10 years or more.

A good word of appreciation goes to our dear old friend, Mr. Eman, for his many years of service to the company. He is a great and dedicated employee. Thank you and thank you, especially our customers, for your long-term and efficient work.

REMINISCES . . .

means of transportation. They tied their donkeys at a "kwili" tree outside the gate when they arrived on Monday mornings equipped with seasonings, communal pots and pans, for they didn't leave for home again until at the end of the workweek. Between those days, they slept in hammocks or, later on, in the barracks. In the evenings, they went fishing close to where the OMCC building is now, fried it fresh fish everyday, and ate it together with the lunch that they'd already prepared. That's how it was . . .", reminisced Freddy.

In Freddy's 40 years of service, there were at least three very pleasant events that still hold a place in his memory. "I cannot forget the big party that Captain Rodger had at the White House when the two big ships, named Cerro Azul and Cerro Ebano, entered the San Nicolas Bay. There was lots of food, drinks, and people . . ." The 4th of July celebrations were also memorable. "Everyone was welcome. Fireworks were thrown on the ocean close to the PH-1 area and lots of sports activities were organized such as, baseball games and polegames on donkeys . . ."

But the most impressive happening," said Freddy, "were the dancing on ice shows in the 50's. They were held behind the Rainbow Bakery every night for two weeks. It was beautiful, the most impressive happening I ever experienced. I was there every night."

During his 40 years at Lago, Freddy was a very active employee. For a few years, he was President of the Lago Employee Council, an employee representation organization. At present, Freddy Dinksz still sings for the locally acclaimed "Vivons en Chantant" group and for the Sta. Teresita Church Chor. He also works full time for the School of Arte in San Nicolas.

PAPIANDO . . .

hariñ's bunchi, panchi y weva, ya cu ta te fin di siman mama nan tabata bai cas atrobe. Den e dianan di siman nan tabata diumí den hamaca ol, mas despues, den e baracanan. Anoche nan tabata bai písca cerca di unda e edificio di OMCC ta awor, hasa e písca (písca fresco mi dia), y comé huento cu e lanchei cu ya man a prepara caba . . . Ta sina cos tabata antes . . .". Freddy a relatá, cordando pasado.

Den Freddy su 40 año di servicio, tabata tin poi lo menos tres evento placentero cu ainda ta ocupá lugau den su memoria. "Mi no por libidá e fiesta grandi cu Captain Rodger a organizá na Casa Blanca ota cu e dos barconan grandi, vamá Cerro Azul y Cerro Ebano, a drenta e bayo de San Nicolas. Tabata tin hopi cuminda, behida, y hende . . .". E celebracionnan di 4 di Juli tambe tabata memorable. "Tui hende tabata bon-bini.

Klapchi y vuurpijil tabata wordo tira ariba laman cerca di e area di PH-1 y hopi actividadan deportivo tabata wordo organizá; manera weganan di baseball y weganan di polo ariba burico . . ."

"Pero e suceso mas impresionante," Freddy a bisa, "tabata e shownan di baile ariba ips' den añanán 40. Nan tahata wordo tení tras di Rainbow Bakery tur anoche pa dos siman lugo. E tabata buntita, e suceso mas impresionante cu hamas mi a yega di presencia. Mi tahata cynan tu anochi."

Durante su 40 añanán na Lago, Freddy tabata un empleado hopi activo. Pa varios año e tabata presidente di Lago Employee Council, un organizacion representante di empleadonan. Au tualmente, Freddy Dinksz ta canta ainda pa e localmente adlamá gupo Vivons en Chantant y pa e coro di misa Sta. Teresita. Tambe e ta triha "fulltime" pa e School di Arte na San Nicolas.

Lord Boxoe ta dedicá cantica na Lago

"GOD BLESS LAGO" (Dios bendiciona Lago) ta e título di e calypso cu pensionista di Lago, Yrad Ilidge, mejor conocé como Lord Boxoe, a graba ariba un disco di 45 rpm na ocasión di Lago su 60 aniversario.

"E calypso ta basá ariba mi sentimientonan personal pa cu Lago," Lord Boxoe a bisa, "Lago tahata significá tur eos pamí. Mi a cuminzá traha akinan como mucha, tempo cu mi tabata tin solamente 14 año, y mi a traha

"I was nicknamed "Boxoe" by my parents when I was a baby, because I was fat and they happened to know a fat man with that name," explained Yrad Ilidge. When he first participated in the calypso contest over 20 years ago, he called himself "Lord" Boxoe. It is under that name that he won 16 trophies over the years.

akinan praticamente hente mi bigla. Tui loke mi sá mi a siña di Lago." E rancion a worto scribi tambe como un homenaje na cada empleado di Lago cu a contribui na Lago su existencia pa sesenta año.

Lord Boxoe, kende a bai cu pension dia 1 di Januari di e año aki despues di 38 año di servicio, ana pasá a bira Road March King cu e famoso "GeGe". Den e 20 añanán cu elá participá den e contestnan di carnaval, elá gana un total di 16 título, sea como Road March King of Calypso King. Algun di su mibos composicionnan manera "GeGe" y "Meat," a worto grabá ariba e otto banda di disco.

Acompañamiento musical tabata den man di Triple "S" cu tres empleado di Lago como miembro di a banda: Sonny Hoo, Manager y saxofonista; Casin Giel, pianista, y Lativ Hoo, trombonista.

LAGO

THROUGH THE YEARS

LAGO

The beginnings

On August 14, 1924, the steamer Brion arrived at Azuila with on board Captain Robert Rodgers, Captain William Clark, and J. Oswald Boyd, who were looking for a harbor where the crude oil from Lake Maracaibo could be transshipped to the British Equatorial Oil Company.

Captain Robert Rodger, a Scot by birth, came to Aruba in 1924 looking for a harbor suited for crude transshipment. Mr. Rodger was referred to as "Mr. Lago" for many years.

Lago Petroleum Corporation bought up the British Equatorial Oil Company and out of this arose Lago Oil & Transport Company, Limited. For the time being, the sole purpose of the Company was the establishment of a transshipping station.

In 1925, the British shares in Lago passed into the hands of the Pan American Petroleum Corporation; and in July 1927, a group of experts including Lloyd G. Smith, arrived in Aruba to investigate whether the transshipping station could be converted into a refinery to refine Venezuelan crude. Aruba was favored above other places

the date the first barrel of crude went through the stills. In the first years of its existence, 22 million dollars were invested on extension projects. In the meantime, the Standard concern, which was interested in Aruba, had taken over the whole industry from the Pan American Corporation on behalf of the Standard Oil Company of Indiana. In 1932, the industry passed into the possession of the Standard Oil Company of New Jersey. The Esso trademark was formed by the letters S and O of Standard Oil.

Expansion

Expansion continued, and in 1937, a start was made by cutting an entrance through the reef on the westside so that ships no longer needed to run around in the narrow harbor basin. The harbor's equipment was brought up to date, and a hospital was built for the amount of US\$200,000.00. The so called "Colony" came into being. In 1937, Lago Heights, consisting of 150 houses, became

the first "outside" settlement built by Lago. This was soon followed by Essoville, and in 1947, "Lagoville" was built by a special branch of Lago, the Home Building Foundation.

The War Years

Lago and Aruba played a most important role throughout the Second World War, refining 1 out of every 16 barrels of aircraft fuel used by the allied forces. It was no coincidence then that the first torpedo fired in the Western Hemisphere during the war, struck the island of Aruba in February 1942. Several ships, anchored just outside the San Nicolas harbour, sunk and many lives were lost as a result. During the war, Lago built its single largest unit, the catalytic cracking unit or PCAR, which started operation in 1943 and was closed down about thirty years later.

Postwar Activities

When the refinery returned to peacetime operations after the war,

Views of Lago's main gate in the early beginnings ...

The First Barrels

January 29, 1929, is recorded as

The tank above is recorded as "probably the first tank" built at Lago

period, it saw tremendous activity in maintenance and reconstruction programs. The harbor was reconstructed, a Main Shop housing the carpenter, welding, coppersmith, blacksmith, pipe, instrument and electrical operations under one roof was constructed, the hospital was expanded, and a laundry and bathhouse were built.

With all the postwar activities, Lago reached an all-time peak of about 3,000 employees of which about 300 were expatriates. The company needed a department consisting of approximately 600 employees to manage maintenance and repair of over 600 houses, barracks, quarters, a hospital, dining facilities, clubs, commissaries, and the Eagle Sport Park.

The Harbor

A development necessary for the growth and maintenance of the Lake Tinker fleet operated from 1920 to the mid-fifties, when the port opening to Lake Macuroabo was accomplished, obviating the need for Lake tankers.

A succession of dredging projects and dock changes kept pace with the trend toward larger tankers. Two off-shore berths were built in connection with transhipment

of crude oil to Exxon refineries in the U.S. Reebirth 2, the deeper of the two berths, has accommodated the largest vessel afloat, the 560,000 ton Seawise Giant.

Modernization, Workforce Reduction

Major changes took place in the refinery during the late fifties, with a move toward fewer refining units with greater capacity. A number of the stills built in 1928 were rebuilt and modernized and many were torn down. New technology became necessary as the requirements of the users of petroleum became more exacting. Many factors contributed to the reduction in the refinery's workforce during the fifties.

Competition increased through the decade, principally through the construction of new refineries and expansion of existing ones in nearly all of Lago's marketing areas. As the Aruban community itself progressed to the point where it could provide services which formerly were nonexistent on the island, and as the need for greater efficiency and elimination of nonessential activities became obvious, Lago switched from a completely self-sufficient entity to purchased or contracted services when these became available. All

this brought about a constant reduction of the workforce through the years. From a peak of 8,300 employees in 1949, it went to 5,134 in 1960, 2,305 in 1965, 1,618 in 1977, and finally to less than one thousand in January of 1984.

LVS / LSF

The Lago Vocational School, which since 1935 had prepared close to a thousand young men for jobs with Lago by extending their education, ceased operations in 1957. By that time, the government-operated Aruba Technical School was giving vocational training. In March, 1957, the Lago Scholarship Foundation was established to aid Aruba students seeking higher education in Holland and the United States.

Automobile no. 124-A is recorded as "probably the first one" to drive within Lago boundaries.

Billions of Barrels

Since the Lago refinery started operating on January 29, 1929, the total barrels of crude refined has surpassed 6,500,000,000 (six and-a-half billion). The first billion barrel was attained on March 15, 1945, the second billion on July 4, 1952, the third billion was reached on February 9, 1959, the fourth billion on January 19, 1965. On October 14, 1971, Lago refined the fifth billion barrel of oil. The sixth billion mark was reached on February 15, 1979.

VOLUME 46 - NO. 9

SEPTEMBER 1984

Over 200 employees learn Safety Audit Techniques

President Antonio Cavallaro in his opening remarks at the Management Safety Audit Training: "Our task is twofold. One, we must recognize when things are done wrong, and two, we must do something about it..."

Over 200 employees of all departments at Lago will be attending the Management Safety Audit Training during the months of October and November.

To stress the importance management gives to this training program, President Antonio Cavallaro remarked the following at the initiation of the course: "At Lago we are emphasizing safety, because we believe that all injuries can be avoided. It is our task to see to it that all work is done safely."

The task is twofold: One, we must recognize when things are done wrong, and two, we must do something about it. If we do not, an accident will surely happen. If we do not alert someone when he is doing something wrong, we are in effect telling him that what he is doing is all right, and that is very detrimental."

"To help members of management and supervision accomplish that task," said Mr. Dwight Monk,

Senior Safety Consultant of the DuPont Company and the instructor of the program, "we will teach them effective techniques for safety auditing. That is the objective of this training program."

How does that contribute to accident prevention? "We have found out," said Mr. Monk, "that in our own DuPont companies, 96% of all accidents are caused by human error. In this safety audit course, we teach the participants to detect potential risks by watching people at work, analyzing those work activities for risks, and then do something about the problems encountered."

In teams of three, Mr. Monk conducts safety audits in the refinery. "Many people aren't accustomed to looking at people and their actions," explained Mr. Monk. "They've been taught to look at equipment. In fact, they spend their time on the 4% instead of the 96% that cause the

accidents."

On the audit trip, the participants have to observe the positions of the people, their actions and how they use the tools and equipment.

Afterwards, a discussion of the observations takes place and the participants are to develop ideas on how to make the refinery a safer place to work.

According to Mr. Monk, this Management Safety Audit Training is one of the most important aspects of managing safety. "This course," he said, "is the most important step any company can take to raise its standard of performance and to maintain it. That is why we recommend the participants to spend 30 minutes to one hour a week watching their people at work and correcting the problems they see."

In other words, this training is just the beginning of a continuous audit activity.

Part of Group I participants of the Management Safety Audit course during the 4-hour classroom session.

Mr. Dwight Monk of DuPont, conducting a safety audit tour in the field with three of the classroom participants. Mr. Monk points out that in order to detect potential risks, one must learn to "watch people at work, analyze their work activities and then do something about the problems encountered."

Mas cu 200 empleado di tur e departamento na Lago lo asistia na Management Safety Audit Training durante e lunanan di Octobei y November.

Pa enfatizá e importancia cu gerencia ta duna na e programa aki di entrenamiento, Presidente Antonio Cavallaro a remarcá lo siguiente na comienzo di e curso:

"Nos na Lago ta enfatizando seguridad, pasobra nos ta kere cu tui herida poi wordo evitá. Ta nos tarea pa wak pa tur trabao wordo hací na un maneja sigrá.

E tarea tin dos aspecto: Uno, nos mester reconocé ora cu cosnan ta wordo haci' robez y dos, nos mester haci algo pa drecia esaki. Si nos no hacié, un accidente lo tuma lugar indudablemente. Si nos no alertá un hende ora cu e ta haciendo algo robez, nos ta en realidad bisando e persona ey cu lo cual e ta haciendo ta bon, y ese y ta hopi dañoso.

"Pa yuda miembrianon di gerencia y supervisión logia e tarea ey", Sr. Dwight Monk, Senior Consultant di Du Pont Company y e instructor di e programa di entrenamiento aki a bisa, "nos lo siña nan técnicanon efectivo pa revision de seguridad. Esey ta e objetivo di e programa aki di entrenamiento."

Con ese y ta contribui na preventión di accidente? "Nos a desculpi," Sr. Monk a bisa, "cu den nos propio compañianon di Du Pont, 96% di tui e accidentenan ta wordo causi pa

errornan humano. Den e curso aki di revision di seguridad, nos ta siña e participantenan pa detectá riesgonan potencial doo di observá hendenan cu ta trahando, analizando e actividadnadan di trabao pa mira kiko e riesgonata, y e ora ey haci algo tocante di e problemanan cu a wordo encontrá."

Den equipo di tres persona, Sr. Monk ta dirigi revisionnan di seguridad den e relineria. "Hopi hende no ta costumbri pa observá hendenan y nan accionnan," Sr. Monk a splica. "Nan a wordo siña pa wak e equipo. En realidad anto, nan ta gasta nan tempo arriba e 4% en bez di e 96% eu ta causa e accidentenan."

Arriba e excursion di revision, e participantenan mester observá e

Mas cu 200 empleado ta siña técnicanan pa revisá seguridad

position di e hendenan nan accionnan y con nan ta nza e hermentnan y e equipo. Despues e observacionnan ta wordo discutir y e participantenan mester bin cu idean pa hacer refinaria en lugar mas seguri pa trabaa. Segun Sr. Monk e Management Safety Audit Training ta un di aspectonan mas importante pa mancha seguridad. "E curso aki, ela bisa, "ta e eos mas importante cu cualquier compania por haci' subi su norma di ejecucion di trabao y pa mantene esaki. Ta pesey nos ta recomendá e participantenan pa dedicar 30 minuit pa un hora pa simau observando nan hendenan ota nau ta trahando y corrigiendo e problemanan cu nan ta mua."

Cu otro palabria, e entrenamiento aki ta solamente e cumplimiento di un actividad continuo di revision.

To kick-off the Off-The-Job Safety campaign, employees were asked to contribute with off-the-job safety slogans. The winners of the contest were Agapito Hoek with his slogan in Papiamento "Na trabao ... of pajor, seguridad ta mihor" and Dave Fleming with "Safety is Right! Day and Night". On photo, from left to right, Dave Fleming, President Antonio Cavallaro, Agapito Hoek and Gene Goley, the Off-The-Job Safety Committee Chairman.

SIMPLE STEPS TO TREAT A BURN

Sooner or later, you may have to deal with a burn, either on yourself or on a family member. The kitchen at home, for instance, is a great source of heat, and thus for burns. Hot liquids, pots and pans, direct furnace fires and high oven temperatures. Before you or a family member is affected, it is important to find out how to treat a burn and when to seek professional help.

Almost all first degree burns, which look red like a sunburn, can be treated at home. Small second degree burns, which have blisters in the skin, can also be treated at home. However, if the burn involves the eyes, ears, face, hands, etc., or covers a large area, it should be treated by a doctor. All third degree burns, which involve actual destruction of skin, must be treated in a hospital.

This article is intended to do with any burn to remove the source of heat and to apply ice or cold compresses directly to the burn. This should be continued for about 30 minutes.

Now, the burn area should be washed gently with cool water and dried up. Any blisters that are present should not be broken but left alone. Coat the burn with a thin layer of petroleum jelly or an antibiotic ointment, such as bacitracin, and cover it with a sterile gauze dressing. If you do not have any gauze, the burn can be left uncovered. Home remedies, such as butters and oils, should not be used, as those are not sterile solutions and will only contaminate the wounds.

The most important principle in treating burns is to avoid infection. This means that the burn MUST be kept CLEAN. The dressing should be changed daily, and checked for any sign of infection, such as the presence of pus, a foul smell, or any worsening of the appearance of the burn. If any of those signs are noticed, your doctor should be contacted.

The pain associated with the burn is best treated with a mild painkiller, such as aspirin. If that

is not enough, the patient should see a doctor. So remember these important principles, apply ice, keep it clean, and watch for infection.

Note: So far this year, there were one on-the-job and three off-the-job disabling injuries caused by burns.

Pa: Dr. Larry D. Crook

Pasonan simple pa trata un quemadura

Porta, cu na cualquier ocasion, bo mester trata un quemadura, sea na bo mes de na un miembro di familia. E cushiona na cas por exemplo, ta un fuente grandi di calor, y como tal, també pa quemadurana: liquidonan cayente, weya v panchi, candela directo di stool v temperaturanan halto di lorno. Promé en abo ol un miembro di familia wordo alectá, ta importante po haya si con pa trata un quemadura y ki ora pa bensu ayudo profesional.

Cast tur quemadura di promé grado, cu un un color corá maneca kimá-di-solo, por wordo tratá na cas. E quemadurana chikito di segundo grado, en ta ocasiona blaaa ariba e cuero, tambe por wordo tratá na cas. Sinembargo, si ta un quemadura na wovo, cara, man, ol pia, ol un quemadura cu ta cubri: un area grande, y mester wordo atendi pa un dokter. Un quemadura di tercier grado, cu ta envolvé un destrucción real de e cuero, mester wordo tratá na un hospital.

E promé cos pa haci ora di trata cualquier quemadura, ta pa kita e luente di calor v pone compresan di ips ol awa frieuw directamente ariba e quemadura. Esaki mester continui pa mas o menos 30 minut. Siguentemente, e area di quemadura mester wordo labá poco poco en awa regularmente frieuw v un habón suave. Cualquier blaar cu a forma no

mester wordo kibrá, pero mester wordo lagé henter. Hinta y cubri e quemadura cu un capa fini di "petroleum jelly" o un "antibiotic ointment", esta un bálsamo antibiótico, maneca Bacitracin y cubri e quemadura cu verbandu di gaas steril. Si bo no tin "gauze bandage", bo por keda sin cubri e quemadura y lagé asina mes. Remedianan doméstico, manera manteca ol azetanano, no mester wordo uzá, como cu esakanan no ta solucionnan steril v solamente lo contaminá e quemadura anan.

E regla mas importante den tratamiento di quemadurana ta pa evita infección. Esaki kier men cu e quemadura MESTER wordo teni LIMPI. Diariamente e verband mester wordo cambiá y controlá pa mira si tin cualquier indicación di infección, manera e presencia di pus, un dolor desagradable, ol si e quemadura ta parse di a bira peor. Si qualquier di e indicacionnan aki wordo notá, tuma contacto en bo dokter.

E dolor cu ta asouá en e quemadura por wordo aliviá minor cu un calmante, manera aspirin. Si esey no ta basta, ta minor pa e paciente bai dokter. Corda e principionan importante aki, pone ips, tené limpi, y traer i wordo pa infección.

Nota: Te avor e aña aki, tabata un un herida incapacitante na trabao v tres herida incapacitante dolor di trabao, en a wordo causá pa quemadurana.

As large as Exxon is, the basically simple way Exxon organizes its multifaceted interests makes it easy to understand who we are.

Picture an organization chart, with 14 boxes. Eight of these represent companies that perform functional tasks, irrespective of geography; the others represent companies that are responsible for energy related operations in different parts of the world. The former are called "operating companies" and the latter "regions."

Here is an updated thumbnail sketch of Exxon and its 14 parts, including headquarters' locations and approximate number of employees as of year-end 1983.

Exxon Corporation

Broad policy guidance for the entire corporation is provided by corporate headquarters in New York City, under the general direction of Exxon's board of directors. The day-to-day management of the corporation is the responsibility of the chief executive officer assisted by a management committee composed of senior executives.

The executives oversee management performance in the major operating companies and regions with special attention to three areas: long-range investment plans and capital budgets, operating results, and the ability to find and identify executive talent and use it effectively.

The New York headquarters includes staff departments specializing in various phases of the petroleum business, as well as departments responsible for finance, controllership, taxation, law, corporate planning, investor relations, communications and computer sciences, employee relations, medical and environmental health services, office of coal coordination and public affairs.

Several of these corporate departments are located in East Millstone and Florham Park, N.J. Number of employees: 1,700

WHAT IS

Regions

Exxon Company USA

Responsible for petroleum, natural gas, and synthetic fuels in the U.S. Includes exploration production, refining, marketing and supporting services. Companies affiliated with Exxon USA handle coal, pipelines, shipping, insurance and real estate development. Headquarters Houston, Texas. Number of employees: 30,300

Esso Middle East

Coordinates the bulk of Exxon's oil and gas interests in Saudi Arabia, Egypt, Qatar and The United Arab Emirates. Most of the employees of the affiliated companies in the region are local nationals. Headquarters: New York City. Number of employees (headquarters and expatriates) 270

Esso Europe Inc.

Coordinates oil and gas interests in Europe and Africa, including oil, gas and coal interests in Austria, the Benelux countries, France, Greece, Italy, Portugal, Finland, Scandinavia, Spain, Switzerland, the United Kingdom, and West Germany. Headquarters: London. Number of employees: 27,400

Imperial Oil Limited

70 percent ownership. Responsible for the following operations in Canada: petroleum, natural gas, minerals, coal, chemicals and fabricated products, research and engineering services. Headquarters: Toronto. Number of employees: 13,100

Esso Eastern Inc.

Coordinates oil, gas, oil shale and coal interests in the Far East, South and Southeast Asia and Australia. Employees are mostly nationals of the countries in which they work. Headquarters: Houston, Texas. Number of employees: 9,400

Esso Inter-America Inc.

Oil, gas, and coal interests in Central and South America and in the Caribbean, and international marketing of coal (excluding Imperial coal) into markets outside North America. Headquarters: Coral Gables, Florida. Number of employees: 8,800

EXON?

Operating Companies

Exxon Enterprises

Develops and coordinates certain petrochemical business ventures outside the basic fuel, chemical and metals industries. Major units include Exxon Nuclear Energy, Office Systems, Gaffney-Cook Inc., and Zilog Inc. Headquarters: New York City. Number of employees: 10,900.

Exxon Chemical Company

Manages Exxon's worldwide chemical interests. In sales ranks as ninth largest chemical company worldwide and fourth largest based in the United States. Operations are coordinated by four organizations in headquarters in Houston, Berlin, Hong Kong and Toronto, the latter being the chemical division of Imperial Oil Limited. Four product lines for primary petrochemicals, polymers and fabricated products; agricultural chemicals and solvents and specialty chemicals are each managed as a worldwide business with its own manufacturing, marketing and technology activities. Headquarters: Danbury, Connecticut. Number of employees: 18,100. These numbers do not include Imperial's Chemical Division.

Exxon International Company

Coordinates the international supply, acquisition and transportation for crude oil and products for Exxon's affiliates worldwide. Sells purchases and exchanges crude oil and products to balance the company's international needs and to improve profitability. Coordinates the international marketing of oil and provides technical assistance in the areas of aviation fuels, marine fuels, lubricants and petroleum coke. Operates and maintains an international fleet of ocean-going tankers and provides technical assistance and research in the areas of tanker design, construction and operations. Headquarters: Flushing Park, New Jersey. Number of employees: 1,700.

Exxon Minerals Company

Worldwide coordinating and operating responsibility for all non-industrial minerals activities except for manganese oxide marketing and lubrication and for operations in Canada. Headquarters: Houston, Texas. Number of employees: 1,800.

Exxon Research and Engineering Company

Performs exploratory, fundamental and applied research and development in petroleum, coal, oil shale and other resource areas. Offers complete engineering services on processes, plants and support equipment. Provides research and technological applications on processes and products. Headquarters: Clinton, New Jersey. Number of employees: 3,700.

Exxon Production Research Company

Performs research, development and engineering studies relating to the discovery and production of petroleum, oil shale and coal. Offers research assistance to affiliates worldwide on geology, geophysics, geochemistry, drilling problems, pipe-lining, offshore operations, reservoir analysis and development. Headquarters: Houston, Texas. Number of employees: 1,600.

Esso Exploration Inc.

Oil and gas exploration principally in Africa, Europe, Asia and South America, and mobile marine drilling worldwide except in Canada and the United States. Headquarters: Houston, Texas. Number of employees: 550.

Reliance Electric Company

Designs, manufactures, markets and services a broad line of industrial automation components and systems for worldwide markets. Includes electrical motors, drives, controls, weighing and control equipment, mechanical power transmission equipment, telecommunication components and electrical power distribution equipment. Headquarters: Cleveland, Ohio. Number of employees: 23,300.

Off-The-Job Safety Fair

Cas di Cultura
**November
13, 14, 15**
Employees
and
spouses
invited to
attend

About 200 employees have participated in this year's Lago Inter-departmental softball tournament. OM&S received the winning trophy, while Technical I became sub-champion. Congratulations to the winners, but also to all participants for completing this 9-week tournament without any disabling injuries.

Don Esch receives trophy for the OM&S team.

Final game OM&S v/s Technical I.

LAGO

provides

FIRE TRAINING

for over 10 countries

This year for the fourth consecutive year, Lago has offered a 40-hour fire fighting program to participants of over 10 different countries. Two separate courses were held, one for English speaking participants and the other for the Spanish speaking ones. The program included theoretical background information and practical experience on the fire training grounds.

A number of qualified observers consider the Lago Fire Training Center to be on the same level as some of the better known professional schools, such as Texas A&M and the Louisiana State University, commented Bill Crenshaw, Lago's ex Security Administrator, before his departure. In the four years of training at Lago, over 25 countries have sent representatives to attend. This year's program was under the direction of Fire Chief Errol Brown with the assistance of Lago's Volunteer Fire Fighters and the professional fire fighters.

Bill Crenshaw and Errol Brown, during Bill's opening speech.

Group of Fire Trainees from different parts of South, Central & North America, including Asia.

The Fire Fighting Section now boasts a new National Foam Pumper truck with a 1000 gallon capacity. Lago now has 9 fire trucks in service, each with different functions and modes of operation.

LAGO ORGANIZES

LAGO TA ORGANIZÁ

A grandiose affair the Lago Off-the-job Safety Fair Off-the-job safety is serious business to Lago ... but that does not mean that music, dance, prizes, food, fun and laughter cannot form part of this educational and informative Safety Fair. This Lago Off-the-job Safety Fair will be held for all employees and their spouses on November 13, 14, 15, beginning at 6:45 p.m. at the Cas di Cultura.

We invite you to take a peek at the program content:

• Presentation of themes

Four themes will be included in the presentations: health, safety in traffic, at home, and in sports. Slide presentations will be ongoing while the presenters discuss their topics

Traffic

Inspector Roland Peterson of the Government Police Department will give an overview of the traffic situation in Aruba and will provide some specifics about the performance of Lago employees on the road. At Lago, traffic accidents actually account for a larger number of lost days than any other type of off-the-job accident. Mr. Peterson will present useful information on how to prevent traffic accidents, including tips on "defensive driving".

Home

"Home, sweet home" is definitely true for most people, but "Home, safe Home" is also worth striving for. So far this year, about 22% of all off-the-job accidents have occurred in the home. Mr. Frans Wernet, ex Senior Safety Inspector at Lago and ex Acting Lieutenant Governor of Aruba will discuss suggestions on how to make your home a sweeter and safer one for the entire family.

Sports

Sports activities can be fun and healthy. As a matter of fact, those are the only two good reasons to participate in sports. Can you imagine then, that sports is the main cause of accidents when you're away from your job???? A slide presentation with recorded

Off-The-Job Safety Fair

text narration will be shown to remind you how you can keep accidents out of your sports activities.

Health

Find out what are some of the most prominent health hazards that affect our employee population Even better yet, let us discover some preventive medicine before we find ourselves having to cure any diseases ... Dr. Arthur Meiners of the Lago Medical Center is the presenter of this topic.

• It's entertainment time!

A touch of festivity will be added to the rather serious topic of "Safety" by the skillful and creative dances performed by "Simadanza". The doorprize event together with a "surprise" contest will add some fun to it too!

• Lago's 60th anniversary commemoration

A get-together of all Lago employees in 1984 would not be complete without a 60th anniversary commemoration. A completely synchronized slide presentation with recorded narration will cover Lago ... yesterday, and ... today ... 60 years of history ... This presentation includes thematic dances by Simadanza.

Cont. on page 3

Un asunto grandioso ... El Lago "Off-the-job Safety Fair", esta e exposición organizá pa Lago, pa promove seguridad palor di trabajo ... Seguridad palor di trabajo ta un cuestion serio pa Lago ... Pero eseve no kiermen cu música, baile piccionan, cuminda, diversion x-hatimiento no por lorma parti de exposición educativo y informativo aki di seguridad El "Off-the-job Safety Fair" aki di Lago lo woldo tení pa tu empleado y nan esposa/o arriba dia 13, 14, y 15 di Novembre cuminzando pa 6:45 p.m. na Cas di Cultura

Nos ta invitabo pa tra un bisteden e programa pa hauña un idea di su contenido.

• Presentacion di temanan

Cuatro tema lo woldo inclui den e presentacionnan, salud, seguridad den trafico, na cas y, den deporte. Presentacionnan de "slides" lo ta tumando lugar mientras cu e presentadoran ta discutir nan topicaman ...

Trafico

Inspector Roland Peterson di Cuerpo Policial di Aruba lo duma un resumen di e situación di trafico na Aruba y lo suministra algun dato específico tocante e actuacion di empleadonan di Lago arriba caminda. Na Lago, accidentenan di trafico realmente ta respondé pa e cantidad mas grande di diafan di trabajo perdi cu cualquier otro tipo di accidente palor di trabajo. Sr. Peterson lo presentá información útil tocante con pa prevenir accidentenan di trafico, incluyendo conseño aruba con pa manehá na un manera defensivo.

Na cas

"Hogar, dushi hogar" signifia beredad pa mayoría di gente, pero tambe ta vale-la-pena pa hauñ esfuerzo pa yega na un hogar signif. Te awor e año akti, mas o menos 22% di tur e accidentenan palor di trabajo a tuma lugat na cas. Sr. Frans Wernet, ex Senior Safety Inspector di Lago y ex Gezaghebber Interno di Aruba lo discuti sugerencias aruba con pa haci bo cas un hogar mas dushi y signif pa hente lamia. *Cont. on page 3*

Safety Fair...

Cont. di pag. 2

• Exhibits, refreshments and gifts

After the formal presentations, all who attend the program will be invited to take a look at the exhibits in the exhibit room. Every home will have its own exhibit. One traffic booth for example, will have a video on "seatbelts". The health exhibit will feature two videos on "how to conduct a healthy lifestyle". A corner will also be made available for measurement of employees and spouses to check weight and blood pressure regularly. At the sports exhibit a video on "how to prevent sports injuries" will be shown. In the

Lago
Oil & Transport Co. Ltd.
Nov. 13, 14, 15
Cas di Cultura

Entertainment - Displays - Refreshments

home exhibit you may hear some music from outer space. Do not worry too much, it is a video, showing how foolish sometimes our attitudes at home may seem to an alien race person.

Of course, snacks and refreshments will be provided and at the end of the program you will receive a gift to take home.

That is not all.... We encourage every employee and spouse to attend this fair to see what is in store.... You should be receiving your invitation at home shortly.... Keep your assigned dates open for this fair.... And remember to bring your invitation card with you to the Cas di Cultura.

Deporte

Actividadan di deporte por ta divertido y saludable. En realidad, eseyan ta e único dos bon motivoan pa participá den deporte. Bo por imagina bo mes ante en deporte ta e razón principal di accidente ora bo ta palo di trabao? Un presentacion di "slides" cu narracion grabá di un texto lo wordo pasá pa cordabo con pa evita accidentenan den actividadan di deporte.

Salud

Descubri kiko ta algun di e peligrosan mas prominente cu ta afecta nos población di empledonan Mihos ainda, laga nos descubri algun remedí preventivo prome cu nos haña nos mes ta cura cualquier malesta Dr. Arthur Meiners di Lago Medical Center ta e presentador di e topico aki.

• Ta ora pa entretenimiento!

Un toke di fiesta lo wordo añadina e topico bastante serio di "Seguridad" pa e bailean habil y creativo presentá pa Simadanza. E evento di "doorprize" hundo cu un concurso "sorpresa" lo hací esaki mas divertido ainda!

• Conmemoracion di e di 60 aniversario di Lago

Un reunion di tur empleado di Lago na 1984 lo no ta completo sin un conmemoracion di Lago su di 60 aniversario. Un presentacion completamente sincronizada cu narracion grabá di un texto lo cubri Lago avera, y awe

60 año di historia E presentacion ta inclui bailean temático tecí pa Simadanza.

• Exhibicionnan, refresco y obsequionan

Despues di e presentacionnan formal, tu estan cu ta asisti na e programa lo wordo invitá pa mira e exhibicionnan den sala di exhibicion. Cada tema lo tin su propio exhibicion. E exhibicion di trafico por ejemplo, lo tin un video ariba "seatbelts", esta lahanan di seguridad. E exhibicion tocante salud lo muestra dos video ariba "con pa conducir un estilo di vida saludable". També un skino lo wordo haci disponible pa empleado y nan esposa o interesá midi nan presión di sangre y verificá nan peso. Na e exhibicion di deporte un video tocante "con pa prevenir accidentenan den deporte" lo wordo presentá. Den e exhibicion di cas bo lo por tener algun voz di un persona de espacio ultraterrestre No preocupa mucho; ta un video e ta, mostrando con bobo nos actitud na cas por ta parece na un persona de espacio ultraterrestre Un otro video ordinario cu ta duna conscho tocante seguridad na cas també lo wordo pasá.

Naturalmente, pasa boca y refresco tambe lo wordo sirbi y na fin di e programa bo lo haña un regalo pa biba cas

Y ese no ta tur Nos ta encuashá cada empleado di Lago y nan esposa/o pa asisti na e exhibicion akí pa mira kiko tin pendiente Bo lo ricebi bo invitacion na cas dentro di poco tempo Tene e lecha cu bo a wordo asigna habrá pa e exposicion akí Y corda pa tice bo carchi di invitacion cubo oia bo bini Cas di Cultura

The "Employee Bowling Showdown" has been going on for a couple of weekends. Over 60 employees are participating. The best 30 bowlers, with a minimum of 10 games, will compete in the finals. On photo: Carlos Kvidena of Administrative - Materials in action.

THE LAB:

Quality control plays an important role in any type of competitive business, especially when customer's satisfaction has to be guaranteed. General Motors Company, for instance, inspects and test-drives its cars as they roll off the assembly line. Thanks to quality control, we can drive our cars without fear of unpleasant surprises. A petroleum refiner, such as Lago, also has the obligation to test its finished products to ensure that specifications are met. Motor gasoline products, for instance, are tested for critical octane qualities to ensure their compatibility with the design of the engine they will

Juan Villaroel is preparing to run distillation on a diesel oil sample on a fully automatic distillation unit.

CONTROLLING QUALITY

be used with. Especially in the oil industry, where competition is so harsh, quality control is of utmost importance.

At Lago, the quality control is done by the Laboratory. Quality control is performed in three different phases of our operations: when the imported crude is discharged, during processing of the raw material and blending into different products, and upon shipment of those finished products.

The quality control performed on the crude received is conducted primarily for economic reasons. Because of the nature of the crude source and transportation means, water in the crude cargo will be present in different concentrations. Since this water has zero value, Laboratory personnel measures every crude receipt for its water content. Another critical quality of the imported crude is the API gravity (American Petroleum Institute standard related to density). The Lago Laboratory runs on the average 3,000 water and API analyses per month on crude and products.

The Laboratory plays an essential role in maximizing yields of higher value products by finding and maintaining optimum operating

conditions. Also, if the crude fed into a process unit is not properly controlled and monitored, severe unit upsets, premature shutdowns, and increased lautng may occur, resulting in additional operating and maintenance costs. For that reason, Lab personnel is continually analyzing the crude fed to the Pipestills for water and salt and the feed to the Gofiners for color and pitch entainment. At the process units, the crude is fractionated into different streams which do not meet all specifications of a finished product. When these streams are blended into finished products, the Laboratory is again required to perform various quality control tests. Since Lago is basically a fuel oil refinery, the tests most frequently run by the Laboratory are viscosity, flash, and sulfu. These specifications are required to ensure satisfactory operation of combustion systems, safe transportation and storage of the fuel oil, and compliance with environmental control. All other products such as butane, naphtha, aviation and motor gasoline, and Jet Fuels are tested to meet particular specifications related to their end use. Once the finished products are

blended and tested by the Laboratory in the shore tanks they are ready for shipment. To ensure that contamination has not taken place and that the vessel is on-spec (according to specifications), tests are performed on samples taken at the loading lines from the vessel. If the results are satisfactory and consistent with the shore tank results, the vessel is approved for sailing. The samples of those tests are retained by the Laboratory to serve as evidence that the vessel was on-spec when it left Aruba.

The Laboratory is an integral part of the overall refinery operations. From the time the crude enters the refinery up to the point of custody transfer of the products, the Laboratory acts as a service organization supplying data critically needed to run our business in a safe and profitable way. A refinery without a Laboratory would be running blindly, like a car without a driver.

Laboratorio:

Sixto Flores enters data in the Laboratory computers. This data is accessed by process personnel.

CONTROLANDO CALIDAD

Un control de calidad ta hunga un papel importante den cualesquier uno di los seis competidores para garantizar una satisfaccion di consumidor mestre wordo consumidor. Especial Metros, la operacion se impulsa ta consumo constante y tiene condiciónan di producir un producto ora cu tan buenas cu otras di montaña. Danki a esa calidad di crudo, nos por dentro nos distinguimos sin un medro de insatisfaccion degradable. Un reflejo di este-dicho manejo

Lago combinatorio obligado pa exponerse al producto final pa garantizar que el producto cumplan ta wordo di uso. Productonan pa gasolina, motor oil por ejemplo, ta wordo examinado pa e calidad nadie critica di lo mismo pa seguir nan comptabilidad en el diseño di e mestre en el organismo wordo itza. Esperadamente di una industria di petróleo, una competencia ta asina severo, control di calidad ta de mayor importancia.

Na Lago, e control di calidad ta wordo hace por e Laboratorio. Control di calidad ta wordo realiza den tres diferente fase di operacion: ora en descarga e crudo importa, durante elaboracion di e materialman prima y mezclamiento pa vega na e diferente productonan, y ora cu e

productonan final wordo despachá. E control di calidad realizá arriba di crudo cu wordo recibí, ta wordo conduci na prome lugar pa motihonan económico. Debi na e clase di fuente di crudo y e medio di transportacion, awa lo ta presente den diferente concentracion den e cargamento di crudo. Como cu e awa aki su balor ta serio, personal di Laboratorio ta midi e contenido di awa den cada cargamento di crudo cu ta vega. Un otro propiedad critico di e

lavonan por tuma lugar, resultando den gastonan adicional di operacion y mantencion. Pa e motivo ev. personal di Laboratorio continuamente ta analizando e crudo cu ta wordo suministrá na e "pipestill" pa awa y salo y e "Gofiner" nan pa e color y "pitch entraînement". Na e unidadnan di proceso, e crudo ta wordo fraccioná den diferente "stream", cu no ta satisfacé tur e especificacionnan di un producto final. Otra cu e "stream" nan aki wordo mezclá pa vega na e productonan final.

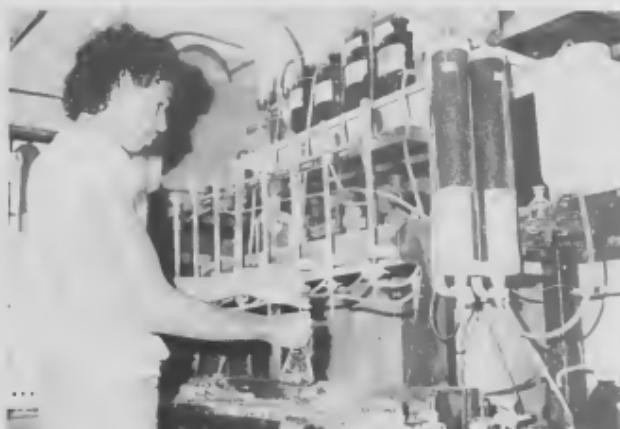

Laboratorio atobe mestre realizá varios test pa control di calidad. Como cu Lago ta básicamente un refinera di azeta combustible, e testinan cu e Laboratorio ta core mas frecuentemente ta viscosidad, inflamacion y azufre. E especificacionnan aki ta requiri pa seguir un operacion satisfactorio di e sistemanan di combustion, transportacion y almacenaje segun di azetana combustible, y complacencia cu e control di medio ambiente. Tin otto producto maneta butano, nafta, gasoline di aviaciòn y motor y "Jet fuel" ta wordo inspecciona pa satisfacé especificacionnan particular, relaciona cu min. nro

Virginio Angelis of the Analytical Section is analyzing a boiler feed water sample.

Laboratorio...

Cont. al pag. 5

Beltran Lugo inspects a heating oil sample for mercaptan sulphur.

final. Una vez cu e productonan final wordo mezclá y analisis wordo haci pa Laboratorio den e tankinan na tera, nan ta clá pa wordo despachá. Pa seguirá cu contaminacion no a tuma lugar y cu e barco ta "on-spec" (según especificación), testnan ta wordo haci arriba muestranan tumá na e lineanán di cargamento y di e barco. Si e resultadoan ta satisfactorio y consistente cu esnan haña na tera, e barco ta haña aprobacion pa nabegá. E muestranan di e análisisan ey ta wordo wardá na Laboratorio pa

sirbi como prueba cu e barco tabata "on-spec" ora cu ela salí di Aruba.

Laboratorio ta un parti íntegro di e operacionnan di e refineria. For di e momento cu e crudo dienta den e refineria te na e punto di traspaso di custodia di e productonan. Laboratorio ta función manera un organización di servicio cu ta suministra datoran crítico cu ta necesario pa manchá nos negoshi na un maneta sigur y lucrativo. Un refineria sin un Laboratorio ta mancha un auto sin un manchador.

Wing Vrolijk runs a Gas Chromatograph analysis of butane prior to approval for export.

Hot weather, a source of injuries

By: Dr. Larry D. Crook

During a recent summer in the United States, over 1,000 people died of heat injuries. Since in Aruba it is summer all year-around it is important for everyone to know about the different types of heat injuries, their symptoms, treatment and prevention.

There are some factors such as high temperature and lack of wind that make heat injuries more likely to occur. Other less obvious factors that make people susceptible to heat injury are increasing age, obesity, lack of acclimatization, underlying medical problems, poor physical condition, recent alcohol use, and some medications. Clothing which interferes with the evaporation of sweat is particularly dangerous.

Heat exhaustion usually develops in a person who is not used to working in a hot environment. It develops slowly, over hours or days. The patient feels weak and light-headed. He may develop painful muscle cramps, and may vomit or faint. The body temperature may be normal, or mildly elevated. A person suffering from this type of heat injury should be removed to a cool environment and be given cool drinks with added salt.

Exertional heat injury is seen in athletes who overexert themselves. An athlete or worker, who is exerting himself strenuously, may develop weakness, a stumbling gait, and delirium along with a high body temperature. Even coma may develop if treatment is not prompt. In a case like this, the patient should be undressed, rapidly cooled by spraying him hei with cool water and by fanning him vigorously. The patient should not be placed in an ice bath, but if available, place ice packs on the neck, abdomen,

goat and under the sun. He should be taken to a hospital even if he recovers quickly.

Heat stroke is characterized by a rapidly rising temperature to 104°F or higher. The temperature may be taken rectally since the oral temperature is not reliable. The patient may be delirious or unconscious. The skin is hot, and sweating may or may not be present. The pulse is strong and rapid. These patients will die unless their body temperature is reduced quickly. First aid treatment is the same as for serious heat injury, and the patient should be taken to the hospital as soon as possible. Education prevent heat injury.

First of all, it is important to know your own limits and the limits of the people you are responsible for. If you are working in the sun and feel faint, go to a cool place and rest. Frequent short breaks are better than infrequent long breaks. Water should be taken in regularly if you are working or playing in the heat. Thirst is NOT a good guide, and you should drink BEFORE you feel thirsty. Plain water is the best drink. Instead of using salt tablets, extra salt should be added at that particular mealtime. By being aware of the risks and taking the appropriate preventive steps, no one should have to experience the effects of heat injury. Prevention is up to you. •

Con nos ta píveni di wordo afectá pa calor? Promé cu tur cos, ta importante pa ho conocey be mes límite y e límite di e hendenan cu ta eai bao ho responsabilidad. Si ho ta trahando den solo y bo ta sinti débil y tolondra, bai na un lugar fresco y descansá.

Interupcionan cortico y frequente ta mihios cu descansan largo y infrecuente. Mester bebe awa regularmente si se ba trahando ol hungando den calor. Sed NO ta un bon guia, y bo mester bebe awa PROMÉ cu bo haya sed. Awa puro ta e mihior cos pa bebe. En vez de uza pastiña di salo, mester come mas salo den cuminda e ora ey.

Conociendo e riesgonan y tumando e pasionan preventivo apropiado, ningun hende tin mester di experiencia y elecciónan di herida causá pa calor. Prevencion ta depende d'ello.

Tempo caluroso, un fuente di heridanán

DURANTE EL VERANO OCURREN mucha. Los días en 100°F sonlos causan la causa de calor. Una cosa Aruba tiene tanto calor que es importante para uno no exceder de 104°F de temperatura di cuerpo pa calor, una enfermedad tratamiento y consecuencias.

Un digo que la mejor manera de evitar la salud. Túta di controlar tu propia probabilidad di sufrir una enfermedad pa calor más. La mejor forma de prevenirlo es obviamente mantenerse sana y resistente na temperatura di calor, ta edad, estación o en general falta de hidratación y obviamente médico o enfermera. Si el condición lísico, como cuando glorios y algún medicamento. Pregón cu ta interfiere con la evaporación di sudor ta parte de tu cuerpo peligroso.

Debilidad causa pa calor generalmente ta desatoya di un persona cu no ta costumbre di trailes den un ambiente calor. La desatoya poco a poco, durante hora o diahan. El paciente ta sinti débil y tolondra. E poi cumenza sinti calambres doloroso den e muscularian, y poi saca o bañito de tino. E temperatura di su cutpa por ta normal di un poco mas alto. Un hende sufriendo di e tipo di síntomaan aki mester wordo hibá den un ambiente fresco y mester diun algo no mucho frieu pa bebe, agregando salo na e bebida. Daño causá pa calor cu ta alerta esnan cu ta hací demasiado

esfuerzo, ta muestra cerca atletanan kendenan a lorza nan mes demasiado. Un atleta, of un trabajador, cu ta forza demasiado por cumenza sinti un debilidad, e ta tambalea ora e cana, y por hafia delirio, hundo cu un temperatura di curpa halto. Hasta coma por desaroyá si e no hafia tratamiento liber. Den un caso asina, e paciente su paña mester wordo kitá y mester refresca e paciente door di duné un baño cu awa cu no ta mucho frieu, y petecúa pa e hafia hopi aire fresco. No mester pone e paciente den un baño di ijs, pero si tin, pone ijs lorá den paña di set bete ariba su nek, su abdomen, su "goin", esta e parti bao su batica y bao di su brazanan. E mester wordo hibá na un hospital, hasta si e recuperá liber.

"Heat stroke", esta isolacion ol "zonnestoek", ta caracterizá su mes door di un subiendo liber di e temperatura di curpa, pa 106°F di mas alto. E temperatura mester wordo tumá tectalmente, ya cu e temperatura oral no ta confiable. E paciente po tin delirio, ol poi ta lot di tino. E curpa ta cayente, y ta posible cu e paciente ta sodando. E pulso ta lucte y hopi liber. E paciente an lo muri a menos cu nan temperatura di curpa wordo bahá libes. E tratamiento pa promé ayudo ta igual na esan causa doos di hacie demasiado estucio, y e paciente mester wordo hibá pa un hospital mas liber posible.

The Safety Baseball game is in "full swing" at Lago. Although Lago is presently putting a greater emphasis on Off-the-job safety, on-the-job safety will continue to be stressed. The Safety Baseball Game was instituted as an incentive for employees to keep working together for a safer refinery. The entire organization was divided into teams, the Lora, Blenchie, Trupial and Barica Geel. For every week without a restricted duty (or more serious) injury, the teams move ahead one base. For every three runs scored, the team members receive a gift. All team members have already received their first gift, as shown by Simon Arends, a project engineer in Technical at Lago T-shirt.

VOLUME 46 - No. 11

NEWS

NOVEMBER 1984

On October 31, 1984, Lago Oil & Transport Co., Ltd., announced its intention to shut down on March 31, 1985. Under these special circumstances it appears to be proper to dedicate an issue of the Esso News to: "How to look for a job". This topic has been handled in books, newspapers, magazines and seminars.

Obviously then, it is not possible to cover all possibilities or approaches in looking for a job in this one issue. This issue does, however, include some general suggestions that you can use to your advantage.

* * *

Dia 31 di October, 1984, Lago Oil & Transport Co., Ltd., a anuncia su intencion pa sera su portanan dia 31 di Maart, 1985. Bao di e circunstancianan especial aki, ta parce di ta apropiia pa dedica un publicacion di Esso News na: "Con pa busca trabao". E topico aki a ser trata den buki, corant, revista y seminarianon.

Obviamente anto, no ta posibel pa cubri tur posibilidad y acercamiento den buscamento di trabow den e solo publicacion aki.

Sinembargo, e publicacion aki ta contené algun sugerencianan general cu bo por usa na bo beneficio.

HOW JOB

to look for a

First impression: your application letter

The job application letter is the letter you write to a prospective employer to apply for a job. Your goal is to get the employer interested in you to the extent that he will contact you for an interview. That is why this letter should truly represent you. Because it does, whether you know it or not.

Being unknown to the employer, this letter is your first opportunity to make a favorable impression. Use it! Your personality, individuality and background should all form part of that letter. The tone of such letter should always, however, be one of modest confidence in your abilities. The appearance of the letter should be

neat, with well-aligned margins, and without any grammatical or typographical errors.

The application letter is very personal, there are no definite rules as to how you should write it. There are, however, some guidelines, stated below, that you can follow, adding or subtracting until it fits your needs:

Paragraph I:

- State where/how you learned of the position
- Say that you are applying for a certain job

Paragraph II:

- Relate how your education and experience fit the employer's requirements

Paragraph III:

- Mention personal qualifications

Finding a job is not easy these days. Finding a job that would be perfect for you is even more difficult. To say the least: Finding a job is a job in itself.

Before you start job hunting, you have some homework to do. First, take a good look at yourself.

Discover or rediscover your personal qualities. What are your strengths and your weaknesses?

What services can you offer to an employer? Think about your skills, knowledge, experience and abilities. You probably will discover quite a few positive qualities you forgot you had. Next, search out prospective employers. Scan through the "wanted ads" in the newspapers and contact your friends and relatives to find out whether they know of any business in need of a person with your qualifications.

You can also put on the list, those companies that you know employ people with your qualifications, even though they may not have any vacancies at the moment (they may put your data on file and contact you when they do have vacancies).

Now you can apply for a job! To do that, you have to go through the following steps:

I. Write your curriculum vitae (also referred to as "resume" or "data sheet")

II. Write your job application letter.

III. Prepare yourself for an interview with the prospective employer.

These three items will be individually discussed in this issue.

EXAMPLE I

Lagostraat 19
San Nicolas
Aruba, Netherlands Antilles

January 5, 1985

Mr. John Smith
Managing Director
Smith & Muller Company
12 NW 21st
Miami, FL 33140
U.S.A.

Dear Mr. Smith:

Your ad for an Accountant in your Marketing organization in last Saturday's Herald is of special interest to me because it calls for qualifications which correspond with my background and job objective.

You will note from my enclosed resume that I have a good professional background in financial accounting, and also some years of experience in the marketing field.

I would like to be employed by a company such as yours, which I consider to be one of the most promising in the area. With seven years of experience at one Company, I am looking forward to new challenges which I know will await me as an Accountant with your firm.

May I ask you to read the resume and permit me to phone your secretary next week for an appointment? I look forward to meeting with you.

Sincerely yours,

Jonathan Jones

- Explain why you would be successful in such a position and why you are interested in that kind of business.

Paragraph IV:

- Refer to your resume which should be attached to your letter.
- Express your wish for an interview.

Do not try to say too much in your application letter. It should not be longer than one page. All other information should be covered in your resume. The two examples, on pages 2 and 3, will give you a better idea of what an application letter looks like.

Please note that you should send a personal letter to every company where you apply for a job. Do not send photocopies of standard letters of different firms. That would show a lack of interest and common courtesy.

EXAMPLE 11

Medurostraat 999
Oranjestad
Aruba, Netherlands Antilles

December 10, 1984

Mr. J. Smith
Bartender's Department
Insurance Unlimited
Aruba, Netherlands Antilles

Clerk Ms. Mark

I was informed by one of your employees that you will soon have an opening for the position of Secretary in your Medical Claims Department. I believe that I am qualified for that position, and am therefore sending you a copy of my resume.

My shorthand rate is 120 wpm; and my typewriting rate 70 wpm. I am experienced in the use of machine dictation and transcription equipment. I am also thoroughly familiar with the use of electronic display writers.

As you can see from the attached resume, I have experience in handling medical claims, and I believe that this experience will be quite useful at your Company also.

I am looking forward to an interview at your convenience. Insurance Unlimited is a company I know I would enjoy working for.

Sincerely yours,

Samantha Smith

Samantha Smith

CON pa busca

TRABAO

No ta facíl pa hanja un trabao den e temporan aki. Hanja un trabao cu lo ta perfecto pabo ta hasta más difícil. Pa bisé na un manera suave: Hanja un trabao ta un trabao ariba su més. Pero promé bo cuminiza busca trabao, bo tin algun tarea pa haci. Promé, wak bo mes den spiel. Descubri ol te-discurbi bo cualidadnan personal. Kiko ta bo potencialnan y bo debilidadnan? Ki servicio bo por ofréce un doño di trabao? Pensa ariba bo aptitudes y saber, experiencia y habilidadnan. Probablemente bo

lo descubri un bon cantidad di cualidadnan positivo di cual bo a libidá cu bo tabata tin nam. Siguientemente, busca y scehe posible dononan di trabao. Busca den e anuncianan den corantnan pa mira si tin oportunidad pa trabao y tuma contacto cu bo amigonan y familia pa averiguá si nan sá di cualquier negosio cu tin mester di un hende cu bo cualidadnan. Tambe bo por pone ariba bo lista, e companianan di cual bo sá cu nan ta emplea hendenan cu bo cualidadnan, aunke por ta cu na e momento ey nan no tin oportunidad pa trabao (nan por pone bo datonan den nan "file" y tuma contacto cubo ora cu nan tin oportunidad pa trabao). Awor bo por aplicá pa un trabao. Pa haci esey, bo mester tuma e siguiente tres pasonan:

I. Scirbi bo "curriculum vitae", esta un sumario personal y profesional (tambe yamá "resume", esta resumen ol "data sheet", esta un sumario di datos).

II. Scirbi bo carta di aplicacion pa trabao.

III. Prepará bo mes pa un entrevista cu e presunto doño di trabao.

E tres puntonan aki lo wordo discuti individualmente den e edicion aki.

Promé impresion: bo carta di aplicacion

E carta di aplicacion pa trabao ta e carta cu abo ta scirbi na un posible doño di trabao pa aplicá pa un trabao. Bo meta ta pa logra hanja e interes di e doño di trabao te den tal grado cu e lo tuma contacto cubo pa un entrevista. Ta pesé e carta aki mester realmente representabo. Pasobra e carta ta

haci ese, sea cu bo si of no si. Siendo un desconocido pa e doño di trabao, e carta aki ta bo promé oportunidad pa haci un impresion favorable. Uza e oportunidad aki! Bo personalidad, individualidad y bo antecedente, tuer esaki mester forma parti di e carta ey. E tono di e carta mester ta semper, sinembargo, uno di un confianza modesto den boabilidadnan. E apariencia di e carta mester te nechi y ordená, cu matgennan bon alineá, y sin ningun error gramatical o tipografico. Como cu e carta di aplicación ta hopi personal, no tin reglaman definí pa loke ta trata e manera cu e carta mester wordo scirbi.

Sinembargo, aki ta sigi algun conseho po guia bo ora bo scirbi bo carta, agregaing y kitando te ora e cumpli cu bo necesidadnan:

Parágrafo I:

- Mencioná unda/con bo a hanja sá di e posición cu tin habi
- Bisa cu bo ta aplicando pa un cierto trabao

Parágrafo II:

- Relatá con bo educación y experiencia ta cumpli cu e requisitionan di e doño di trabao

Parágrafo III:

- Mencioná bo cualidadnan personal
- Splica pakiko bo lo ta exitoso den un posición asina y pakiko bo ta interés den e tipo di negoshi ey.

Parágrafo IV:

- Referí na bo "curriculum vitae" (resumé) cual mester compaña bo carta. Tambe expresá bo deseo pa un entrevista.

No purba bisa mucho den bo carta di aplicación. E no mester ta mas largo cu un pagina. Cualquier otro información mester ta cubrir den bo "curriculum vitae", ésta e sumario personal y profesional. E dos exemplonan, arriba pagina 2 y 3, lo dunabó un mejor idea tocante con pa scirbi un carta di aplicación.

Por favor tuma nota cu bo mester manda un carta personal. No manda fotocopia di cartanan di modelo pa e diferente companianan. Esei lo muestra un falta di interés y cortesia común.

THE RESUME: A quick reference guide

Attaching a resume along with the application letter is almost a "must". The resume is basically a summary of your education and your professional advancement along with some personal details. It is very helpful to the prospective employer as a quick reference guide, and as such should not be longer than two pages. Usually, the resume contains the following information:

- A. Personal identification: full name, address, phones
- B. Educational background: start with the highest level of education, conclude with high school. Mention degrees, names of institutes, dates.

C. Employment Experience: chronologically from present to past; include employment dates, job title, brief job description and if applicable a concise summary of your special accomplishments

D. Memberships/Significant courses/Hobbies

E. Personal data: date of birth, birthplace, nationality, health, marital status.

F. References

Below follows some examples of a resume. Remember, though, that you should shape the data to fit your particular needs. You can adapt the headings to suit your requirements, making deletions or adding new headings where appropriate.

E RESUMEN: Un guía pa referencia rápido

Un carta di aplicación mester wordo compaña pa un resumen. E resumen ta básicamente un sumario di bo educación y bo adelanto profesional huntu cu algun detayeman personal.

E ta hopi útil pa e presunto doño di trabao como un guía pa referencia rápido, y como tal no mester ta mas cu dos pagina. Generalmente e resumen ta contené e siguiente información:

- A. Identificación personal: nombre completo, dirección, número de teléfono(nan)
- B. Educación: cuiminiza cu e nivel di educación mas alto, terminando cu skol secundario. Haci mencion di bo gradonan, nombre di institucionnan, lechanan.

C. Experiencia di empleo: cronológicamente di presente pa pasado; inclui lechanan di empleo, título di e trabao, un descripción breve di e trabao y si ta aplicable un sumario conciso di bo logrónnan especial.

D. Miembros Cursonan significante Hobby-nan.

E. Datoan personal fecha di nacimiento, lugar di nacimiento, nacionalidad, salud, estado marital.

F. Referencianan

Aki bao ta sigi algun ejemplo di un resumen. Corda, sinembargo, cu bo mester adaptá e datonan pa scirbi bo necesidadnan pa particular. Bo por adaptá e titulonan pa si bù bo requisitionan, kitando of agregaing titulonan nobo unda ta apropiá.

EXAMPLE ICURRICULUM VITAE

John Smith
Sinaasappelstraat 999
Aruba, Netherlands Antilles
Phones: 99999 (home)
89999 (office)

OBJECTIVE

Initially obtain a position as a professional engineer with assignment covering any of the following areas: project design, project engineering, or cost estimating. Although a career in the professional field is acceptable, a managerial career is preferred.

EDUCATION

Bachelor of Science in Mechanical Engineering, Wheaton College, Boston, Massachusetts, U.S.A., 1974 - 1978.

Pre-college at Colegio Arubano, Aruba, Netherlands Antilles. Diploma. 1969 - 1974.

EMPLOYMENT EXPERIENCE

Summary: Six years of engineering experience at Lago Oil & Transport Co., Ltd., an Exxon affiliate in Aruba.

1982 - Present: Project Engineer. Primary responsibilities included project development from initial phase through cost estimating, funds approval, and actual implementation of projects varying in size from \$50,000 to \$1,000,000. Job responsibilities during the execution phase included field follow-up, safety precautions, job and manpower scheduling, final documentation and dealings with middle and executive management during all phases of the project.

1980 - 1982: Contact Engineer with the Company's Energy Conservation Section. Monitor and analyze energy balances of furnaces and make recommendations for improvement.

1979 - 1980: Engineer. Prime responsibilities included investigating problem areas in the field of rotating equipment. Make recommendations for improvements. Stress analysis of structures, both steel and concrete.

Summer 1976/77: Summer student with the same Company. Project: update piping drawings for the Alkylation Plant.

MEMBERSHIP

Aruba Engineering Society.

HOBBIESTS

Chess, swimming, tennis.

OBJECTIVE

Obtain a position as process operator in a petro-chemical or chemical plant.

JOB EXPERIENCE

Over six years of experience as operator at Lago Oil & Transport Co., Ltd. an Exxon affiliate in Aruba.

1982 - Present: Panel Operator

Direct and give guidance to operating personnel to ensure smooth and efficient operating of process units including start-ups and shutdowns. Record operating data and prepare necessary documentation for turnover at shift changes. Work from posted, written, and oral orders issued by a shift supervisor or higher authority. Confer with preceding and relieving operators. See that operating conditions on the units are maintained in accordance with instructions and make any necessary changes to ensure proper product quality.

1978 - 1982: Assistant Operator

Worked from instructions and under direction of field and panel operators. Visually inspected furnaces and other process equipment at regular intervals to ensure that satisfactory operating conditions were maintained. Replaced the operator on an acting basis when that was required. Kept records of all instruments which were not automatically recorded at the Control House.

EDUCATION

1975 - 1978: Pre-college Mechanical Engineering (MTS); diploma; Aruba.

1971 - 1975: Trade-school; metals trade; certificate; Aruba.

Will be provided on request.

You have already come a long way if you've been contacted for an interview by a prospective employer. It means that your application letter and resume have made a favorable impression on him. It also means that the employer is willing to consider you for a position in his company. The decision that he will take now depends on your interview.

Someone once said that the best guides to follow in an interview are "your own sense of judgement and good taste, the interviewer's manner, the type of position, and your own strongly held principles and standards."

There are, however, some general suggestions you may consider:

- Before you go on the interview, learn all you can about the company you are applying at and the position you are applying for. The interviewer may ask you why you

THE INTERVIEW

chose his company or that specific position.

- Be prepared to answer questions about your past experiences, positions, training, hobbies and personal characteristics. Do not just repeat what is in your letter or resume; expand a little on it.
- At least for the first minute of the interview, the interviewer will absorb what he sees. Therefore your dress, cleanliness, neatness and politeness, in all details, are of utmost importance.
- Give full, but not longwinded, answers to every question asked. In general, a simple "yes" or "no" would be impolite. Give direct, specific and detailed answers.
- Do not criticize your past employers/companies. The interviewer may conclude that you will do the same to his company.

Look directly at the interviewer(s) when answering or listening.

- You should not bluff! Neither should you show any form of extreme self-depreciation.

As we said before, **the best guides to follow are your common sense and good judgement. Be your best self, and success!**

Ya bo lo a logra hopi kaba si bo a sei acerca pa un entrevista cu un prospecto dunador di trabao. Esey kiermeen cu bo catia di aplicacion y bo resumen a haci un impresion favorable arriba dje. Esey kiermeen també cu e dunador di trabao kier considerabo pa un posicion cu su compania. E decision cu e lo tuma awor, ta depende arriba bo entrevista cu ne. Un hende a yega di bisa cu e mihior guianan pa sigi den un entrevista ta "bo mesun sentido di huicio y bon smaak, e maneranan di esun cu ta entrevistabo, e tipo di posicion cu bo ta buscando, y bo mesun principio y estandartean cu bo ta atene bo mes luentemente na nan." Sinembargo, tin algum sugerencia general cu bo lo kier considera:

- Pirome cu bo bai e entrevista, siña tui lo cuad bo por di e compania na unda bo ta aplica y di e trabao cu bo ta

aplica pe E persona cu entrevistabo lo por puntualho pakko bo a kies e compania ol e posicion especifico ey.

- Sea prepara pa contesta preguntan arriba bo experienciaan, posicionnan, entrenamiento, hobby y caracteristican personal. No repeti solamente lo cual ho tin arriba bo catia ol resumen kaba, expande un poco arriba dje
- Por lo menos pa e prime minima di e entrevista, e persona cu ta haci e entrevista lo ta absurbando locual e ta wak. Pese mas, bo maneria di bistu, limpieza, netheid, y bon maneria, den tu detaya, ta di mayor importancia
- Duna contestanan henter, pero sin papia di mas, na tur pregunta cu ser haci. En general, un simple "si" o "no" lo ta sin maneria. Duna contestanan directo, especifico y detava

E ENTRE- VISTA

- No critica e dumadornan di trabao companianan pa ken bo a traba den pasado. E persona cu ta haci e entrevista lo por comi lui o bolo haci mescos cu su compania
- Wak e persona nam e la entrevistabo den su "ban" cultura cu bo contesta o seucha
- Bo no mester blorf! Limpio bo no mester mustia nium forma di falta di aprecio propio

Manera cu a sei bisa prome, e mihior guianan pa sigi ta bo sentido comun y bon huicio. **Sea bo mes, den bo mihior forma, y Exito!**

Bon Pascu
Feliz Año
1985

Christmas Greetings

The President's Message

Merry Christmas
and a
Happy New Year!

It is again Christmas time and we are very rapidly approaching the end of another year; the end of a year, 1984, which has been difficult and trying for all of us.

We began this year with a clear indication that things had to change in Lago's operation. Lago has signed a contract with its crude supplier which was obviously detrimental to the livelihood of the refinery. Steps were taken early in the year to reduce the impact of these changed conditions. As a team we reacted very effectively and were able to reduce significantly operating costs and increase the refinery's productivity. Major improvements were achieved in all operating areas, such as safety, reliability, oil loss, yields, etc. in a very short time.

Yet the worldwide refining environment dictated our overall course of action. We needed to secure an acceptable long-term supply agreement from our traditional crude supplier. Although a high degree of effort and stamina was put into achieving this objective, the desired results was not realized. So this year, 1984, the refinery announced its decision to cease operation. But not before all other possible alternatives had been thoroughly evaluated.

We are fully aware of the impact of the Refinery shutdown on our employees and the community at large. We know that Lago cannot solve all these problems, but we try to alleviate them as much as possible with our separation program and our efforts to help people to develop new jobs. Christmas time is traditionally a period of celebration, but also a time of reflection. Looking back there are numerous things we have to be thankful for. The high degree of maturity and sense of responsibility displayed by Lago's employees during this year is certainly one of those we recognize and are very proud of.

As members of this community, the actions and decisions of 1984 have affected all of us. But let us look at the future with confidence and determination. During Christmas we celebrate the birth of a new tomorrow. Let's all put our efforts towards making that tomorrow a beginning of a new era. A new era that some day we will all be proud of.

Ta temporada di Pascu atrobe y nos ta acercando rápidamente e fin di un otro año; un año 1984, cual tawata difícil y duro pa nos tur.

Nos inicia e año cu un indicacion muy claro cu asuntonan mester cambia den operacion di Lago. Lago a firma un contract cu su abastecedor di crudo cual claramente tawata perjudicial pa sobrevivencia di e refineria. Pasonan a ser tumá na principio di año pa reduci e impacto pa e condicionnan diferente aki. Como un team nos a reaccionar cu hopi efectividad y tawata posible pa nos a reduci gastonan di operacion considerablemente, y aumenta productividid di e refineria. Mehoranzanar grandi a ser alcanzá den tur area di operacion, manera seguridad, dependibilidad, pérdida di azeta, produccion, etc. den un tempo mashá corto.

Sinembargo, e ambiente de refinacion mundial a dicta nos accionnan totalmente. Nos tawatin mester di sigura un acuerdo di abastecimiento acceptable a largo plazo cu nos abastecedor tradicional. Aunke cu un nivel halto di esfuerzo y vitalidad a ser usá pa logra e objetivo aki, e resultadonan deseá no a

Mensahe di President

worde realizá. Asina cu e año aki, 1984, e refineria a anuncia su decision pa cera. Pero no promer cu otro posible alternativanan a ser evalua completamente.

Nos ta completamente na haltura di e impacto cu e cierre di e refineria tin arriba nos empleandonan y e comunidad en general. Nos sa cu Lago no por solucionar tur e problemanan aki, pero nos ta purba di alivio nan tanto cu ta posible cu nos programa di terminacion y cu nos esfuerzonan pa yuda personanan pa desaroya trabaonan nobo.

Temporada di Pascu ta tradicionalmente un periodo di celebracion, pero tambe un periodo di reflexion. Tirando un bista atras, tin hopi cos cu nos por ta agradecido p'è. E nivel halto di madurez y sentido di responsabilidad desplega door di empleandonan di Lago durante e año aki ta seguramente un di nan cu nos ta reconoce y ta orguyoso di dje.

Como miembro di e comunidad aki, e accionnan y decisionnan di 1984 a afecta nos tur. Pero laga nos mira futuro cu confianza y determinacion. Durante Navidad nos ta celebra e nacemento di un mañan nobo. Laga nos tur dirigi nos esfuerzonan pa haci e mañan ey e principio di un era nobo. Un era nobo cual algun dia nos tur lo ta orguyoso di dje.

*Season's
Greetings*

The Esso News cover and centerfold drawings were created by Stan Kuiper, a local artist and arts teacher. He has received his master's degree in Art Education in Holland in 1982, and has worked full-time as a painter and photographer since then, living and having expositions in France and Holland. His work is mainly based on semi-abstract compositions inspired by elements existing in Aruban landscapes. Stan Kuiper is presently residing on Aruba.

Bon Pascu y

Feliz Año Nobo!

WHY NOT ALWAYS?

Are you willing to forget what you have done for other people and to remember what other people have done for you; to ignore what the world owes you and to think what you owe the world; to put your rights in the background and your duties in the middle distance and your chances to do a little more than your duty in the foreground; to close your book of complaints against the management of the universe and look around for a place where you can sow a few seeds of happiness - are you willing to do these things even for a day? Then you can keep Christmas.

Are you willing to stoop down and consider the needs and the desires of little children; to remember the weakness and loneliness of people who are growing old; to bear in mind the things that other people have to bear in their hearts; to try to understand what those who live in the same house with you really want, without waiting for them to tell you; to trim your lamp so that it will give more light and less smoke and to carry it in front so that your shadow will fall behind you; to make a grave for your ugly thoughts and a garden for your kindly feelings, with the gate open - are you willing to do these things even for a day? Then you can keep Christmas.

And if you keep it for a day, WHY NOT ALWAYS?

But remember, you can never keep it alone

By / Pa:

PAKIKO NO PA SEMPER?

Bo ta dispuesto pa lubida loke bo a
haci pa otro hende y corda solamente
loke otro hende a haci pa bo; pa haci
manera bo no sabi kiko mundo debe bo
y pensa solamente riba loke abo mes
debe mundo; pa pone bo derechonan
te patras aya, pone bo obligacionnan
den medio distancia y pone bo chens di
haci djis un poco mas cu loke ta bo
deber mas promer cu tur cos; di sera y
warda bo bukinan di kehonan contra
maneho di universo y busca rond di bo
un lugar caminda bo por sembra algun
simiya di felicidad - bo ta dispuesto pa
haci e cosnan ey maske ta pa un dia?
Anto bo por celebra Pascu.

Bo ta dispuesto pa baha bo cabez y
considera necesidadnan y deseonian di
muchanan chiquito; di recorda con
zwak y solitario hendenan di edad ta;
di tene den bo memoria cosnan cu otro
hende mester tene den nan curazon; di
haci un esfuerzo pa comprende loke
esnan cu ta biba den e mes cas cu bo
realmente ta desea, sin warda te ora
nan mes bisa bo; di ahusta bo lampi di
tal manera cu e ta duna mas luz y
menos huma y di cargo bo dilanti asina
cu bo sombra ta cai patras di bo; di
coba un graf y dera bo mal
pensamentunan y traha un hardin pa
bo sintimenti nan cariñoso y laga porta
visori pa nan - bo ja dispuesto di haci
ti cosnan ey durante un dia? Anto bo
por celebra Pascu.

Y ya di bo por tiaci e rason ey po un
dia, PAKIKO NO FIA SEMPER?
Dien no lubida, bo no por celebra
Pascu bo so.

Every year the same types of accidents occur during the holiday season. No doubt they will again occur this year, but following the hints given below may help you avoid them from happening to you or your family.

Drinking & Driving

You have heard it once, twice, a hundred times, and it's worth repeating: Never, never mix alcohol with driving. The mixture is an explosive one. Of course it is by far preferable not to drink alcohol; but if you're going to, take along a friend who does not drink — take a taxi — take a bus — anything that keeps you away from a steering wheel after drinking. Remember, killing or hurting yourself is one thing, but how would you feel having to live with the knowledge that you killed or hurt someone else because you would not control your drinking?

Christmas Decorations

Electricity cannot be seen, cannot be heard, but it can surely be felt with fatal effects. Here are some simple rules to follow when applying electrical lighting as

Christmas decoration: Inspect the lighting sets for frayed wires, loose connections, and broken sockets. Christmas lights can put an extra strain on the electrical circuit on which they are placed. If you are not sure about the circuit's limits,

ask a qualified electrician. Do not use tacks and/or nails to keep wires in place, use special brackets made for this purpose. Wax candles should not be placed on or near a Christmas tree and do not place lights on metal (artificial) trees. Watch your children when they're near the tree. They love to play with the bulbs. This is dangerous, however, as they can get burned or cut if a bulb breaks. If they loosen the bulb and play with the socket, they can even receive an electrical shock.

Around the Home

This is also the time when extensive repairs, painting, and upgrading is done to our homes. Needless to say that when working around the house, you should also exercise safety. Use the right tools, use good ladders, don't lean over too far to reach that last piece of wall or beam.

We owe it to ourselves and our families to come through these holidays safely. Let's do it!

Pasando un temporada di fiesta

Cada año es un tiponan di accidente ta ocurri durante e temporada di fiesta. Sin duda nan lo ocurri e año aki atroba, pero siguiendo e sugerencias mencioná aki abajo, por yudabio pa evitá cu nan lo pasa cu bo of bo familia.

Bebiendo y Manehando

B'a tende un, dos, cien biaha, y e ta vale-la-pena pa wordo ripiti: Nunca, nunca mezcla alcohol y manchamiento di auto. E mezcla aki ta uno cu ta explosivo. Ta claro cu lo ta mas preferible pa no bebe alcohol, pero si bo ta bai bebe, hiba un amigo cu bo cu no ta bebe — tuma un taxi — bai cu bus — cualquier cos cu ta tenebo lew for di un stuuriwiel despues di a bebe. Corda bon, matando of heridando bo mes ta un cos, pero con lo bo sinti si bo mester biba cu e conocimiento cu bo a miata of herida un otro hende pasobra bo no kier a controla bo bebedimento?

Decoracionnan di Pascu

Coriente ta algo cu nos no por

mira, cu nos no por tende, pero cu indudablemente nos poi sinti cu efecton fatal. Aki tin algun regla simpel pa nos sigi ora di colga luz electrico manera decoracion di Pascu.

Inspecciona e serie di luznan pa mira si tin waya cu a hiaña, conexionnan cu ta los y "socket" nan cu ta kibrá. Luzanan decorativo di Pascu por pone un tension adicional arriba e circuito electrico arriba cuil nan ta wordo conecté. Si bo no ta sigur tocante e limitenan di e circuito, puntra un electricista competente. No uza punaise y/o clabo pa tene wayanan na nan lugar. Uza "bracket" nan special, trahá pa e propósito aki. Belanai di "wax", esta parafina, no mester wordo poní arriba of cerca di kerstboom, y no pone luz den kerstboom artificial. Tira un vista arriba bo

yuinan ora cu nan ta cerca di e kerstboom. Nan ta gusta hunga cu e bombillonan. Esaki ta peligroso, sinembargo, como cu nan poi hafña kimá or cortanán si e bombillo ta kibrá, ol un "shock" di coriente si nan los e bombillo y hunga cu e "socket".

Trabaonan rond di cas

Esaki tambe ta e temporada cu reparacion extensivo, verlento y mejoracion wordo haci na nos casnan. Ta innecesario pa bisa cu oia di haci trabaonan rond di cas, tambe bo mester erheré seguidad. Uza e herment correcto, uza trapinan cu ta den bon condicion y no rek y colga mucho lew ovei di e punta di e trapi pa yega na e ultimo pida muraya de balki.

Nos tin un obligacion pa cu nos mes y nos lamillanan pa pasa e temporada festivo aki sigur. Laga nos haci ese!

HOLIDAY BLUES

By: Dr. LARRY CROOK

The holiday season will soon be here again and so will the opportunity to overindulge in food and drink. How many of us have promised ourselves "never again" to overdo it again the next year?

Burgess is that unpleasant feeling in the stomach that comes after overeating. Drug companies have made millions of dollars selling remedies for this condition. But the best treatment is simply to prevent it - don't overeat. This simple step will also help to prevent weight gain at holiday time.

Hangover is another of the penalties for overdoing it. Alcohol, when taken to excess, not only causes the dreaded hangover, but also can cause internal bleeding and liver disease. Many traffic accidents, not to mention home accidents, are caused by alcohol abuse. Christmas holidays however, have been marred by family

ights as a result of too much alcohol? This Christmas, drink sensibly. Two beers, or two ounces of whiskey, or two glasses of wine, or fine, they have the same amount of alcohol and therefore

have the same effect, but drinking more than two can lead to trouble.

Sleep is also important. Lack of sleep causes a decrease in one's physical and mental abilities. This can also lead to accidents,ights, and an inability to handle the many stresses that we will all have to face this particular holiday season.

We should all use common sense this holiday season. Eat sensibly. Drink moderately, or not at all. Get a good sleep every night. Moreover, do not forget to continue any medicines that have been prescribed. Alcohol can be taken safely while using some medications, but certainly not all. So always ask first.

If you follow these simple, and obvious, guidelines you will avoid those holiday blues. Then you and your family can have a very healthy and happy Christmas - which is what all of us really wish.

E malestarman di dianan festivo

Naento e temporada di fiesta lo satisfecho y asina tambe e oportunidad pa come y bebe durante. Cuanto di nos no a comido nos mes "nunca mas", y cuando rego ta haci e mesun cosa enero o en la siguiente?

Malasintoma ta e sensacion desagradable den bo stomia cu ta satisfecho pues di a come dimas. Compramanan di medicamento a miles millones di dollar hendiendo o medianan pa y condicon aki Poco y mejor tratamiento ta simplemente pa prevenir esaki no come dimas. E paso simple aki tambe ta yuda preventi suhimento di peso durante e dianan festivo

Wayaha ta un di e otro castigonian di haci dimas. Alcohol, osa cu bebe demasiado di dje, no solamente ta causa e wayaha desagradable, pero tambe sangramento interno y malesta-

mental. Esaki tambe pot conducir na accidentenan, pleito, y un inabilidad pa trata cu e hopi tensionnan cu no tur tin cu enfrentar e temporada di fiesta aki.

Nos tur mester uza sano juicio e temporada di fiesta aki. Come razonablemente. Bebe moderadamente, ol no bebe mes. Drumi suficiente tui anochi. Tambe, no lubidá pa sigi tuma cualquier remedio cu a wordo prescribi. Cu algun medicamento bo por bebe alcohol sin peligro, pero esaki seguramente no ta e caso cu tur. Pesei semper puntia piomé.

Si bo sigi e consechonan simple, y obvio, aki, bo lo evitá e malestarman di dianan di fiesta. E ora ex albo y bo familia por pasa un Pascu hopi saludable y contento - lo cual ta loko nos tur realmente la deseja.

Pa: Dr. LARRY CROOK
